Everything is so clear.

You get a real sense for why a topological space is more general than a metric space. And when Simmons talks about groups, you begin to see why they're valuable and interesting, not just part of a system. Also it's what we in the world of high literature call "good wrote"--in other words, Simmons can write a sentence.

MATH-510: Topology.
Topology is an important branch of mathematics that studies all the “ qualitative ” or “ discrete ” properties of continuous objects such as manifolds, i.e. all the properties that aren't changed by any continuous transformations except for the singular (infinitely extreme) ones. In this sense, topology is a vital arbiter in the “ discrete vs continuous ” wars.
