I have been training horses since I was a boy. I have some stories to tell, and some advice for horse owners and everyone else, and I would like to share it here. Horses have been part of my life since the day I was born. They have taught me a great deal. I was so excited about sharing my passion with everybody who has horses and who wants to build a real relationship with their animals

A Tough Son Of A Gun Consumer Reports Books

What is Cracking the Code to Profit? Cracking the Code to Profit is the complete, start to finish blueprint for building a REAL BUSINESS in the lawn care and landscaping industry. The author, Ryan Sciamanna, shares all his knowledge on how he went from a solo operator to six crews in three years. Who is the book for? Cracking the

Code to Profit is for anyone thinking about starting a lawn care business to companies trying to break through the \$200k to \$300k gross revenue barrier. If you would like to, but are not already, making \$100k per year as the owner of your lawn care company, you will benefit from reading this book. Why Ryan wrote the book: In 2016 Ryan narrowed his lawn care companies service offering down to lawn mowing and lawn treatments only. Prior to that, his company was a full-service lawn and landscape service provider offering all of the typical services including mulching, pruning, cleanups, leaf removals, hardscapes, landscape design and installation, and snow removal. He made the change in his business model to increase profit margins and reduce the amount of time required of him as the owner of the business. Naturally, he needed to find referral partners for his lawn care customers because they still had other lawn and landscape needs his company no longer performed. He contacted several other lawn and landscape business owners in his area and told them he wanted to send them referrals for the work his company no longer performed and only asked they don't 'steal' his customers for the services they were still providing. After shooting off the first several referrals, Ryan quickly realized that a lot of these companies needed help and until they improved their business operations, referring his clients to them was only making him look bad! He has since stopped referring work with the exception of a couple companies that proved they would provide his customers quality work at fair prices and actually

be reliable. Ryan says, "I think most lawn care business owners started their business just like I did...they enjoyed the work and were good at it, so they said, why not work for myself. In the beginning, it usually goes pretty smooth, but as they add more and more customers and eventually need to hire employees, they get in over their heads. I did the same thing, but quickly educated myself on how to run an actual business and not just be self-employed." He organized all of his knowledge into Cracking the Code to Profit in hopes it will save new business owners years of frustration. Ryan read a similar 'book' before he started his business that his father had bought for him online. It was actually just a word document that someone had written on starting a lawn care business and his dad printed it off for him. It cost his father \$79.95 for that! Ryan still has that 'book' and even though it was overpriced, terrible quality and a lot of the information was not good, he still credits that book towards helping him get his business off the ground. What you can expect from Cracking the Code to Profit - How to Start a Lawn Care Business: The book flows in chronological order from starting your business to your exit strategy. Ryan put every detail he could recall from his own experience. You can see the book chapters in the book preview. After each chapter, action steps are included so you know exactly what you need to do. At the end of the book, you will find the resource section for continued learning and execution. You can expect to have a much better understanding of how to start and grow your lawn care business is a healthy,

profitable way. Ryan's contact info is also included in the book. He would love to hear from you after you finish it!

Easy Lawn and Garden Care CRC Press

In a compelling story of corporate loss, self-analysis, and comeback over a 25-year period, Melrose, head of the Toro Company of lawn and turf care products, recounts parallel journeys: his quest to create a corporate environment that facilitates the growth and development of the employees as well as the organization, and Toro's peaks-and-valleys procession through the '70s and '80s.

Earth Day Taylor & Francis

The need for current and better quality training materials was cited by both certification program instructors and coordinators. In recognition of these shortcomings, the U. S. Department of Agriculture (USDA) funded a major project with Penn State University, The Ohio State University, and the National Safety Council to develop a National Safe Tractor and Machinery

Operation Program (NSTMOP). The result is the NSTMOP Student Manual. This manual, including the task sheets, is the primary curriculum resource developed and designed to be used in a variety of instructional settings. The task sheets are divided into 6 sections: introduction; safety basics; agricultural hazards; the tractor; connecting and using implements with the tractor; and material handling (skid steers, ATV, and utility vehicles). There are a total of 77 task sheets, 48 are identified as core topics. Also included are a skills and driving test layout map and evaluation forms.

Packed with sensible advice and gardening methods, easy-to-follow directions, and illustrations for mastering the essentials.

Straight from the Horse's Mouth

2008 Outstanding Academic Title, Choice Magazine From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain

vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

National Safety Tractor and Machinery Operation Program Student Manual
A New York Times Notable Book for 2011
A Boston Globe Best Fiction Book of 2011
The great panoramic social novel that Los Angeles deserves—a twenty-first century, West Coast Bonfire of the Vanities by the only writer qualified to capture the city in all its glory and complexity
With *The Barbarian Nurseries*, Héctor Tobar gives our most misunderstood metropolis its great contemporary novel, taking us beyond the glimmer of Hollywood and deeper than camera-ready crime stories to reveal Southern California life as it really is, across its vast, sunshiny sprawl of classes, languages, dreams, and ambitions. Araceli is the live-in maid in the Torres-Thompson household—one of three Mexican employees in a Spanish-style house with lovely views of the Pacific. She has been responsible strictly for the cooking and cleaning, but the recession has hit, and suddenly Araceli is the last Mexican standing—unless you count Scott Torres, though you'd never suspect he was half Mexican but for his last name and an old family photo with central L.A. in the background. The financial pressure is causing the kind of fights that even Araceli knows the children shouldn't hear, and then one morning, after a particularly dramatic fight, Araceli wakes to an empty house—except for the two Torres-Thompson boys, little aliens she's never had to interact with before. Their parents are unreachable, and the only family member she knows of is Señ or Torres, the subject of that old family photo. So she does the only thing she can think of and heads to the bus stop to seek out their grandfather. It will be an adventure, she tells the boys. If she only knew . . . With a precise eye for the telling detail and an unerring way with character, soaring brilliantly and seamlessly among a panorama of viewpoints, Tobar calls on all of his experience—as a novelist, a father, a journalist, a son of Guatemalan immigrants, and a native Angeleno—to deliver a novel as broad, as essential, as alive as the city itself.

Popular Mechanics

In this jam-packed and revised edition, readers will learn how to recognize types of lawns, maintain excellent care, and diagnose and cure lawn

troubles. The lawn care program and calendar continue to be reader favorites. Full-color illustrations.

Marine Corps Values

The maintenance of human health and the mechanisms by which this is achieved – through medicine, medical intervention and care-giving – are fundamentals of human societies. However, archaeological investigations of medicine and care have tended to examine the obvious and explicit manifestations of medical treatment as discrete practices that take place within specific settings, rather than as broader indicators of medical worldviews and health beliefs. This volume highlights the importance of medical worldviews as a means of understanding healthcare and medical practice in the past. The volume brings together ten chapters, with themes ranging from a bioarchaeology of Neanderthal healthcare, to Roman air quality, decontamination strategies at Australian quarantine centres, to local resistance to colonial medical structures in South America. Within their chapters the contributors argue for greater integration between archaeology and both the medical and environmental humanities, while the Introduction presents suggestions for future engagement with emerging discourse in community and public health, environmental and planetary health, genetic and epigenetic medicine, 'exposome' studies and ecological public health, microbiome studies and historical disability studies. The chapters in this book were originally published as a special issue of *World Archaeology*.
