A comprehensive yet accessible introduction to the conceptual tools used to explore real-world environmental problems. *Environment and Society: A Critical Introduction, Third Edition* demonstrates how theoretical approaches such as environmental ethics, political economy, and social construction work as conceptual tools to identify and clarify contemporary environmental issues. Assuming no background knowledge in the subject, this reader-friendly textbook uses clear language and engaging examples to first describe nine key conceptual tools, and then apply them to a variety of familiar objects—from bottled water and French fries to trees, wolves, and carbon dioxide. Throughout the text, highly accessible chapters provide insight into the relationship between the environment and present-day society. Divided into two parts, the text begins by explaining major theoretical approaches for interpreting the environment-society relationship and discussing different perspectives about environmental problems. Part II examines a series of objects, each viewed through a sample of the theoretical tools from Part I, helping readers think critically about critical environmental topics such as deforestation, climate change, the global water supply, and hazardous e-waste. This fully revised third edition stresses a wider range of competing ways of thinking about environmental issues and features additional cases studies, up-to-date conceptual understandings, and new chapters in Part I on racialized environments and feminist approaches. *Environment and Society: A Critical Introduction, Third Edition*: Covers theoretical lenses such as commodities, environmental ethics, and risks and hazards, and applies them to touchstone environment-society objects like wolves, tuna, trees, and carbon dioxide. Uses a conversational narrative to explain key historical events, topical issues and policies, and scientific concepts. Features substantial revisions and updates, including new chapters on feminism and race, and improved maps and illustrations. Includes a wealth of in-book and online resources, including exercises and boxed discussions, chapter summaries, review questions, references, suggested readings, an online test bank, and internet links. Provides additional instructor support such as suggested teaching models, full-color PowerPoint slides, and supplementary teaching material. Retaining the innovative approach of its predecessors, *Environment and Society: A Critical Introduction, Third Edition* remains the ideal textbook for courses in environmental issues, environmental science, and nature and society theory.

The problem of the nature of values and the relation between values and rationality is one of the defining issues of twentieth-century thought and Max Weber was one of the defining figures in the debate. In this book, Turner and Factor consider the development of the dispute over Max Weber's contribution to this discourse, by showing how Weber's views have been used, revised and adapted in new contexts. The story of the dispute is itself fascinating, for it cuts across the major political and intellectual currents of the twentieth century, from positivism, pragmatism and value-free social science, through the philosophy of Jaspers and Heidegger, to Critical Theory and the revival of Natural Right and Natural Law. As Weber's ideas were imported to Britain and America, they found new formulations and new adherents and critics and became absorbed into different traditions and new issues. This book was first published in 1984.

The ten stories gathered together in *The Tomorrow-Tamer* are Margaret Laurence's first published fiction. Set in raucous and often terrifying Ghana, where shiny Jaguars and modern jazz jostle for eminence against fetish figures, tribal rites, and the unchanging beat of jungle drums, the stories tell of individuals, European and African, trying to come to terms with the frightening world brought about by the country's new freedom. With the same compassion and understanding she would bring to her later fiction set in Canada, Laurence succeeds brilliantly in capturing the atmosphere of a continent and of individual men and women struggling for survival under the impact of the wind of change.

Solar photovoltaic (PV) deployment has grown at unprecedented rates since the early

2000s. As the global PV market increases, so will the volume of decommissioned PV panels, and large amounts of annual waste are anticipated by the early 2030s. Growing PV panel waste presents a new environmental challenge, but also unprecedented opportunities to create value and pursue new economic avenues. This report, prepared jointly by the International Renewable Energy Agency (IRENA) and the International Energy Agency Photovoltaic Power Systems Programme (IEA-PVPS), is the first-ever projection of PV panel waste volumes to 2050. It highlights that recycling or repurposing solar PV panels at the end of their roughly 30-year lifetime can unlock an estimated stock of 78 million tonnes of raw materials and other valuable components globally by 2050. If fully injected back into the economy, the value of the recovered material could exceed USD 15 billion by 2050.
