Lewis Terman heralded the field of gifted education in the United States by tracing the development of high-IQ children from their childhood in the 1920s to midlife and beyond. The contemporary field of gifted education, building on the work of Terman and others, presumes that gifted children become exceptional adults. Longitudinal research offers the opportunity for critical examination of the way gifted children and adolescents are identified and illuminates the characteristics and experiences that affect sustained achievement. Only long-term studies can directly address whether or not gifted education is finding the right people and doing the right things. The studies demonstrate the fit between longitudinal methodology and the central issues of gifted education. Collectively, they investigate the early determinants of later academic and career achievement and creativity while employing varied identification practices, perspectives,

theoretical orientations, and populations.

Adaption-Innovation is a timely and comprehensive text written for anyone who wants to know more about dealing with problem solving, thinking style, creativity and team dynamics. In an age when teams have become critical to successful problem solving, Adaption-Innovation (A-I) theory is a model in this field, which aims to increase collaboration and reduce conflict within groups. A-I Theory and associated inventory (KAI) have been extensively researched and are increasingly used to assist teambuilding and personnel management. In the context of the management of diversity and change, Dr Kirton outlines the central concepts of the theory, including the processes of problem solving, decision making and creativity as well as explanatory concepts such as the paradox of structure; coping behaviour; the distinction between how teams collaborate on the common task and how teams manage their own diversity. In addition, Dr Kirton focuses on the positive side of managing a wide diversity within teams that has the potential to lead to the highest levels of problem solving, creativity and effective management of change. The book offers practical information for those helping diverse teams succeed in today's demanding climate. In this fresh context, leadership theory is explored, suggesting a new and interesting approach in use of different styles. For those working with diverse, problem solving teams managing complex change, this is a must have book. It will appeal to a broad range of people, from practitioners such as human resource managers, psychologists, business consultants, and group trainers, to academics studying and doing research in disciplines such as psychology, business, management, sociology, education and politics and the practical use of the hard sciences. *This reprint contains some new insights by Dr. Kirton into the theory. A small number of critical key changes have been made: a new diagram showing the difference between decision making and problem solving; some tightening of some sentences to show that leadership style should be treated as roles; the addition of the Glossary of Terms.

Recent research findings have challenged the idea that creativity is domain-general. Domain Specificity of Creativity brings together the research information on domain specificity in creativity -- both the research that supports it and answers to research arguments that might seem to challenge it. The implications for domain specificity affect how we move forward with theories of creativity, testing for creativity, and teaching for creativity. The book outlines what these changes are and how creativity research and applications of that research will change in light of these new findings. Summarizes research regarding domain specificity in creativity Outlines implications of these findings for creativity theory, testing, and teaching Identifies unanswered questions and new research opportunities
