Innovation Management and New Product Development, 3/e The main aim of this book, however, is to bring together the areas of innovation management and new product development and to keep a strong emphasis on innovation as a management process. Written in an accessible style, this third edition brings a change in structure to clearly set out three key areas for the student: Innovation management, managing technology and knowledge and new product development. Brand Management: A Theoretical and Practical Approach, 1/e Brand Management: A theoretical and practical approach gives insight into this phenomenon, moving from the history of the brand to how to develop, manage and protect brands. The book takes a decision-making approach to the subject, structured around the decisions a brand or product manager would face when considering their own brand strategy, covering topics such as design, judicial protection, adverse publicity and financial-brand valuation. **Discoveries and Inventions of the Nineteenth Century** Prentice Hall

Obstetric fistula is as old as mankind. While the incidence has diminished progressively with better health care in Western societies, the situation has changed little in many developing countries. Fistulae of pelvic organs, often monstrous defects, still are a major complication of child-birth causing misery to uncounted young women, and if they cannot find help in one of the very few hospitals with trained specialists, they became urological cripples losing everything: family, home and job. The magnitude of the problem is illustrated by some figures given by Reginald and Catherine Hamlin- about 700 fistula patients treated each year- a total of over 10,000 cases operated upon in their fistula hospital in Addis Ababa, Ethiopia. Most of these injuries could be prevented by better health care at the village level as some studies have shown conclusively. The incidence of fistula is an indicator of the standard of health and obstetrical care. The author of this book- Obstetric Fistula- is an internationally known Australian gynaecologist who for many years has been interested in all aspects of gynaecological urology, especially urinary stress incontinence, other forms of involuntary loss of urine, and associated gynaecological conditions. He has devised a number of new operations to treat pelvic defects. Robert Zacharin's interest in obstetric fistula was a consequence of his surgical activity in developing countries. Applied Business Statistics: Methods and Excel-based applications (second edition) is an introductory Statistics text written specifically for Management students who require an understanding of the role of Statistics in analysing business data in fields such as Marketing, Finance, Human Resources, Production and Logistics. The primary focus of this text is to empower management students with statistical decision making skills so that they become active participants rather than passive observers in business situations where statistical findings are reported and discussed as part of a management decision making process. The text is divided into three major sections: „h exploratory data analysis „h statistical inferences, and „h statistical modelling. Each section focuses on a different role of Statistics as a decision support tool. Emphasis is therefore placed on: „h the data requirements for the various techniques and issues of data quality „h identifying likely application areas through numerous illustrative examples „h noting the limitations of techniques for decision analysis, and the valid management interpretation of statistical findings. A new feature of this edition of *Applied Business Statistics* is the use of computer software such as Excel to

perform statistical analysis. Excel's statistical capabilities are illustrated through numerous worked examples found in the text. Students are given the opportunity to familiarize themselves with Excel's statistical capabilities by applying them to data sets of business problems, which are available on the accompanying CD. Students can monitor their learning with the help of the exercises at the end of every chapter. Each statistical technique is developed through business-related worked examples drawn from the author's diverse work experiences as a statistical consultant. In this way, a student can readily grasp the basic concept of the technique as well as see how it would be applied in practice. This combination of method and application should prove helpful to both student and lecturer. With a working knowledge of Excel, students can become managers who are able to design and conduct their own statistical analysis in the workplace. *Applied Business Statistics* is therefore accessible to all students, as only a basic level of mathematical ability is required to work through this book.

Nation Branding: Concepts, Issues, Practice is a comprehensive and exciting text that demonstrates why nations are embracing the principles of brand management. It clearly explains how the concepts and techniques of branding can be adapted to the context of nations- as opposed to the more usual context of products, services, or companies. Concepts grounded in the brand management literature such as brand identity, brand image, brand positioning, and brand equity, are transposed to the domain of nation branding and supported by country case insights that provide vivid illustrations of nation branding in practice. Nation branding is a means by which more and more nations are attempting to compete on the global stage. Current practice in nation branding is examined and future horizons traced. The book provides: * The first overview of its kind on nation branding * A blend of academic theory and real world practice in an accessible, readable fashion * A clear and detailed adaptation of existing brand theory to the emerging domain of nation branding * An original conceptual framework and models for nation branding * A rich range of international examples and over 20 contributions by leading experts from around the world Country case insights

on nation branding strategies currently being utilized by nations such as Japan, Egypt, Brazil, Switzerland, Iceland, and Russia Clearly and coherently structured, the book is an essential introduction to nation branding for both students and policymakers and will be an essential text for those interested in this fast growing area.

The prison is a recent invention, hardly more than two centuries old, yet it has become the universal system of punishment. How can we understand the place that the correctional system occupies in contemporary societies? What are the experiences of those who are incarcerated as well as those who work there? To answer these questions, Didier Fassin conducted a four-year-long study in a French short-stay prison, following inmates from their trial to their release. He shows how the widespread use of imprisonment has reinforced social and racial inequalities and how advances in civil rights clash with the rationales and practices used to maintain security and order. He also analyzes the concerns and compromises of the correctional staff, the hardships and resistance of the inmates, and the ways in which life on the inside intersects with life on the outside. In the end, the carceral condition appears to be irreducible to other forms of penalty both because of the chain of privations it entails and because of the experience of meaninglessness it comprises. Examined through ethnographic lenses, prison worlds are thus both a reflection of society and its mirror. At a time when many countries have begun to realize the impasse of mass incarceration and question the consequences of the punitive turn, this book will provide empirical and theoretical tools to reflect on the meaning of punishment in contemporary societies.
