“ California ’ s extraordinary flora is described in contemporary detail in this handy volume, which should prove an inspiration to all of those interested in these plants, their habitats, and their importance to a state richer in botanical diversity than any other part of the United States. This is a thorough revision of an indispensable book. ” —Peter H. Raven, Missouri Botanical Garden “ This second edition of The Jepson Manual is a monumental achievement! Far more than a simple update, the book has gone through a thorough revision, making it a must-have book for California plant enthusiasts—professional and lay alike.”—Lucinda McDade, Rancho Santa Ana Botanic Garden

“ Biogeographers, vegetation ecologists, and practitioners of conservation and restoration will all welcome the second edition of the Jepson Manual. Many improvements in this second edition include major taxonomic name changes, more information on habitat / range / phenology, better keys, and new illustrations. The second edition is more user-friendly, accurate, and scientifically rigorous. And these improvements are exactly the kind of recent, authoritative, and trusted flora needed. ” —Michael G. Barbour, University of California, Davis

This volume contains papers contributed to the NATO Advanced Research Workshop "Nonlinear Evolution of Spatio-Temporal Structures in Dissipative Continuous Systems" held in Streitberg, Fed. Rep. Germany, Sept. 24 through 30, 1989. The purpose of the rather long title has been to focus attention on a particularly fruitful direction of research within the broad field covered by terms like Nonlinear Dynamics or Non-Equilibrium

Systems. After physicists have been occupied for several decades mainly with the microscopic structure of matter, recent years have witnessed a resurgence of interest in macroscopic patterns and dynamics. Research on these latter phenomena has not been dormant, of course, since fluid dynamicists interested in the origin of turbulence, meteorologists studying weather patterns and numerous other scientists have continued to advance the understanding of the structures relevant to their disciplines. The recent progress in the dynamics of nonl inear systems with few degrees of freedom and the discovery of universal laws such as the Feigenbaum scaling of period-doubling cascades has given rise to new hopes for the understanding of common principles underlying the spontaneous formation of structures in extended continuous systems.

This volume deals with medieval comparative

Semitic philology (Hebrew/Aramaic/Arabic) as practised by Hebrew philologists in the Arabic speaking lands, from Iraq to Spain, discussing its development through the generations (10th-12th cent. CE), its technics and its theoretical basis.

CRC Press Provides instructions for using the computer program which was developed under the research project, "The Economics of Reducing the County Road System: Three Case Studies In Iowa". This program operates on an IBM personal computer with 300K storage. A fixed disk is required with at least 3 megabytes of storage. The computer must be equipped with DOS version 3.0; the programs are written in Fortran. The user's manual describes all data requirements including network preparation, trip information, cost for maintenance, reconstruction, etc. Program operation instructions are

presented, as well as sample solution output and a listing of the computer programs.

The World Factbook Springer Science & Business Media This two-volume series will describe the mechanisms that are operating on chemicals as they move in the environment. Knowledge of these mechanisms is a vital component in performing a risk assessment. Volume I will deal with the physical and chemical properties of a material and how these influence the degradation and dissipating reactions. Volume 2 will address the transport of the chemical as it moves through the environment from the source to the final sink.

Mémoires du Bureau de recherches géologiques et minières BRILL The proceedings contain the

lectures and contributions given at the workshop on double-beta decay and related topics, which was held at the ETC? (European Centre for Theoretical Studies), Trento, Italy, between April 24 and May 5, 1995. Double-beta decay is of prominent actuality nowadays. With the largely increased actuality of neutrino physics by recent observations and discussions of solar and atmospheric neutrino deficits, dark matter physics and neutrino oscillations and recent corresponding development in Grand Unified Theories, double-beta decay has attained a key position within these problems. The lectures of this Workshop treat the theoretical and experimental status, potential and perspectives of

double-beta decay
