This edition presents extracts from the medieval Welsh encyclopedia *Delw y Byd*. A medieval Welsh translation of the first book of the Latin encyclopedia known as *Imago Mundi*, written by Honorius Augustodunensis in the first quarter of the twelfth century, this text is a fine example of the ties between the intellectual world of Europe and Wales in the late-twelfth/early-thirteenth centuries, when the text was translated, ties that brought across the scientific knowledge based on Roman and late antique sources. Structured according to the four elements: earth, water, air and fire, the text presents geographical, anthropological, and astronomical information, often with historical and mythological contexts. The present edition follows that organizational principle, providing a glimpse into the medieval understanding of the overarching structure of the universe. The text is presented in its historical and literary context, with an updated account of its transmission. A commentary on the scientific context of the most interesting passages is provided, as well as a linguistic one. The edition also provides an overview of the variants by printing parallel texts based on all surviving medieval manuscript witnesses for a number of selected chapters. This includes sections of two previously unpublished medieval witnesses of the text. The accompanying glossary includes vocabulary from all extracts included in the edition.

It's a LOVE thing! How many men or women do you know in toxic relationships? How many men or women do you know that believe love is supposed to hurt? This book is not about the perfect love story. This book is about heartbreak and doing the right things for the wrong reasons. It is about making mistakes, and suffering consequences; this book is also about God's grace, His unconditional love and His redemption. If this book is for you, YOU will learn about what love looks like biblically and you will learn how to identify red flags in your relationships and in your decision making. You will gain a better understanding about what God's best is and what God's will is for your life. You will also learn how God can speak to you when seeking His guidance and direction. This book will help to build your faith in knowing that God is able to help you in your situation.

Mac McKenzie is rich. So rich that he's left his job as a Twin Cities police officer and spends his time doing favors large and small for friends. So when an old Marine buddy of his father's calls with a request Mac takes the time to help him out. And it is one of the stranger favors he's ever been asked: the elderly Mr. Mosley, a beekeeper, wants Mac to find out why his bees are suddenly dying in droves. Mac does some digging and before long turns up a hornet's nest of trouble in the person of Frank Crosetti, a new neighbor on the property abutting Mosley's bees. What started out as an innocent investigation into some unregulated pesticide quickly turns lethal. Crosetti sticks around long enough to make some very specific threats, then disappears into the wind leaving behind a vicious rape, a lifeless body, and a very angry McKenzie bursting for someone to blame. With only the faintest of trails to follow and a suspicious group of federal agents gunning for him, Mac dives underground, taking only a stash of cash and a small arsenal with him on his undercover mission. Before long Mac's deep in the forgotten corners of Minneapolis sniffing for any sign of Crosetti, unable to rest until he gets results. Combining engaging humor and wit with action-packed storytelling, Edgar Winner David Housewright's second Mac

McKenzie novel is clever, compelling, and thoroughly enjoyable.

The impact of information technology in the field of military decision making is superficially less visible than that of a number of other weapon developments, though its importance has grown steadily since the beginning of the 1980s. Owing to its potential role in modern weapon systems and the prospect of its inclusion as an essential ingredient in many military projects such as the Strategic Defence Initiative, it has become the focus of special interest and efforts. This book is the first attempt to present a broad overview of the prospects for information technology in general, and machine intelligence in particular, in the context of international security. The dangers and promises of weapon and arms control applications of computers and artificial intelligence to decision-making processes are analysed in a technical, strategic, and political perspective by experts from six different countries. In an introductory chapter, Allan Din presents a generic overview of artificial intelligence and its prospects. Thirteen contributors then discuss the conceptual and technical framework of artificial intelligence, analyse implications for weapon systems and strategy, and discuss possible applications to arms control verification and modelling.

Love and Sex in a New Relationship explores leaving a long relationship and starting a new one, with all the complexities that entails. Using her experience as a relationship therapist, Cate Campbell takes the reader through the journey of loss and renewal, examining the dynamics involved in the end and beginning of a relationship, and how to give new relationships the best chance of survival. Focusing on three main relationship issues, the book considers: how to end a relationship and manage ongoing contact with an ex; how to understand what went wrong in previous relationships; and how to overcome everyday relationship problems and make relationships thrive. Taking into account the effect of technology and social media, and how to make online dating work, the book offers a distinctly modern take on relationships. Similarly, the spectrum of sexuality, gender and sexual relationships is addressed, with many different examples included throughout the book. With practical advice, case studies, quizzes and exercises to help identify and remedy a variety of problems that can occur at any stage of a relationship, *Love and Sex in a New Relationship* will provide an essential resource for relationship counsellors and their clients.

This book describes a unique approach to smart receiver system design. It starts with the analysis of a very basic, single-path receiver structure, then using similar methods, extends the analysis to a more complicated multi-path receiver. Within the multi-path structure, two different types of phased-array architectures are discussed: Analog beam-forming, and digital beam-forming. The pros and cons are studied, and the gaps are identified. Whereas previous books in this area focus mainly on phased-array circuit implementations, this book fills a gap by providing a system-level approach and introduces new methods for developing smart systems.

This book provides a comprehensive, up-to-date and accessible

introduction to the philosophy of space and time. Ray considers in detail the central questions of space and time which arise from the ideas of Zeno, Newton, Mach, Leibniz and Einstein. Time, Space and Philosophy extends the debate in many areas: absolute simultaneity is examined as well as black holes, the big bang and even time travel. Time, Space and Philosophy will be invaluable to the student of philosophy and science and will be of considerable interest to mathematics students. The clear, non-technical approach should also make it suitable to for the general reader.
