Like many other new technologies which have since been seized and exploited by others, the industrial robot is a British invention. In 1957, a patent was produced by a British inventor, Cyril Walter Kenward, and later it became crucial to the future of robotics. For across the Atlantic two robot builders, Unimation and AMF, both infringed this patent and ultimately a cash settlement was made to Kenward. The owner of Unimation Inc. was Joseph Engelberger, an entrepreneur and avid

reader of Isaac Asimov, the writer who helped to create the image of the benevolent robot. It is claimed that Engelberger's journey of fame down the road which led to him being hailed as the 'father of robotics' can be traced to the day that he met George C. Devol at a cocktail party. Devol was an inventor with an impressive list of patents to his name in the electronics field. One of Devol's patent applications referred to a Programmed Transfer Article. Devol's patent was issued in 1961 as US Patent 2,988,237, and this formed the basis of the Unimate robot which first saw the light of day in 1960. The first Unimate was sold to Ford Motor Company which used it to tend a die-casting machine. It is perhaps ironic that the first robot was used by a company which refused to

recognise the machine as a robot, preferring instead to call it a Universal Transfer Device.

Project Management Springer Science & Business Media Railway Engineering has been specially designed for undergraduate students of civil engineering. From fundamental topics to modern technological developments, the book covers all aspects of the railways including various modernization plans covering tracks, locomotives, and rolling stock. Important statistical data about the Indian Railways and other useful information have also been incorporated to make the coverage comprehensive. A number of illustrative examples supplement text to aid easy understanding of design methods discussed. The book should also serve the need of students of polytechnics and those appearing of the AMIE examination and would also be a ready reference for railway professionals. Immigration Law Handbook

Described by Jeff Proise of PC Magazine as one of my favorite books on applied computer technology, this updated second edition brings you fully up-to-date on the latest developments in the data compression field. It thoroughly covers the various data compression techniques including compression of binary programs, data, sound, and graphics. Each technique is illustrated with a completely functional C program that demonstrates how data compression works and how it can be readily incorporated into your own compression programs. The accompanying disk contains the code files that demonstrate the various techniques of data compression found in the book.

embraces the equipment and systems used to detect, track and store data related to physical, chemical, electrical, thermal and mechanical properties of materials, systems and operations. While traditionally a key area within mechanical and industrial engineering, understanding this greater and more complex use of sensing and monitoring controls and systems is essential for a wide variety of engineering areas--from manufacturing to chemical processing to aerospace operations to even the everyday automobile. In turn, this has meant that the automation of manufacturing, process industries, and even building and infrastructure construction has been improved dramatically. And now with remote wireless instrumentation, heretofore inaccessible or

widely dispersed operations and procedures can be automatically monitored and controlled. This already well-established reference work will reflect these dramatic changes with improved and expanded coverage of the traditional domains of instrumentation as well as the cutting-edge areas of digital integration of complex sensor/control systems. Thoroughly revised, with up-to-date coverage of wireless sensors and systems, as well as nanotechnologies role in the evolution of sensor technology Latest information on new sensor equipment, new measurement standards, and new software for embedded control systems, networking and automated control Three entirely new sections on Controllers, Actuators and Final Control Elements; Manufacturing Execution Systems; and Automation Knowledge Base Up-

This new Southern African edition of Kim Langfield-Smith and Helen Thorne's best-selling Australian Management Accounting text explains the contemporary role of management accounting in organisations - supporting a company's quest for enhancing shareholder and customer value. The effective management of resources, both financial and non-financial, is essential to creating value. Retaining the strategic approach and comprehensive coverage but thoroughly adapted for Southern Africa, Management Accounting Southern African edition is suitable for the one- or two-semester undergraduate course, and is

ideal for use over two years of study. Principles of Physics Longman International Education Division (a Pearson Education Company)
The all-new second volume of Collector's Guide to Novelty Radios is an unbelievable encyclopedia of transistor radios in all shapes and sizes. Featuring over 600 full-colour photos of advertising and product-shaped radios. This comprehensive collector's guide entails current values for these colourful, novelty audio devices, once the most popular mode of communication in North America. Readers will delight in the various styles of radios pictured in this vast reference source.

The 1st SKLOIS Conference on Information Security and Cryptography(CISC 2005) was organized by the State Key Laboratory of Information Security of the Chinese Academy of Sciences.

It was held in Beijing, China, December 15-17, 2005 and was sponsored by the Institute of Software, the Chinese Academy of Sciences, the Graduate School of the Chinese Academy of Sciences and the National Science Foundation of China. The conference proceedings, representing invited and contributed papers, are published in this volume of Springer's Lecture Notes in Computer Science (LNCS) series. The area of research covered by CISC has been gaining importance in recent years, and a lot of fundamental, experimental and applied work has been done, advancing the state of the art. The program of CISC 2005 covered numerous fields of research within the general scope of the conference. The International Program Committee of the conference received a total of 196 submissions (from 21 countries). Thirty-three submissions were selected for presentation as regular papers and are part of this volume. In addition to this track, the conference also hosted a short-paper track of 32 presentations that were carefully selected as well. All submissions were reviewed by experts in the relevant areas and based on their ranking and strict selection criteria the papers were selected for the various tracks. We note that stricter criteria were applied to papers co-authored by program committee members. We further note that, obviously, no member took part in influencing the ranking of his or her own submissions.

An introduction to marketing concepts, strategies and practices with a balance of depth of coverage and ease of learning.

Principles of Marketing keeps pace with a rapidly changing field, focussing on the ways brands create and capture consumer value.

Practical content and linkage are at the heart of this edition. Real local and international examples bring ideas to life and new feature 'linking the concepts' helps students test and consolidate understanding as they go. The latest

edition enhances understanding with a unique learning design including revised, integrative concept maps at the start of each chapter, end-of-chapter features summarising ideas and themes, a mix of mini and major case studies to illuminate concepts, and critical thinking exercises for applying skills.

By the Waters of Liverpool Paper Chase "...profoundly moving..." -Publishers Weekly Nelson Mandela's two great-grandchildren ask their grandmother, Mandela's youngest daughter, 15 questions about their grandad - the global icon of peace and forgiveness who spent 27 years in prison. They learn that he was a freedom fighter who put down his weapons for the sake of peace, and who then became the President of South Africa and a Nobel Peace Prize-winner, and realise that they can continue his legacy in the world today. Seen through a

child's perspective, and authored jointly by Nelson Mandela's great-grandchildren and daughter, this amazing story is told as never before to celebrate what would have been Nelson's Mandela 100th birthday.

The third volume in the classic story of Helen Forrester's childhood and adolescence in poverty-stricken Liverpool during the 1930s. Helen Forrester continues the moving story of her early poverty-stricken life with an account of her teenage years and the devastating effect of the Second World War

on her hometown of Liverpool. At seventeen, Helen Forrester's parents are still as irresponsible as ever, wasting money while their children still lack adequate food and clothing. But for Helen, having won a small measure of independence, things are looking up. Having educated herself at night school and now making friends in her first proper job, she meets a handsome seaman and falls in love for the first time. But the storm clouds of war are gathering and Helen will experience at first hand the horror of the blitz and the terrible toll that the war exacted on ordinary people. As ever, Helen faces the future with courage and determination.

This book thoroughly explains how computers work. It starts by fully examining a NAND gate, then goes on to build every piece and part of a small, fully operational computer. The necessity and use

of codes is presented in parallel with the appropriate pieces of hardware. The book can be easily understood by anyone whether they have a technical background or not. It could be used as a textbook.

Innovation Management and New Product Development, 3/e The main aim of this book, however, is to bring together the areas of innovation management and new product development and to keep a strong emphasis on innovation as a management process. Written in an accessible style, this third edition brings a change in structure to clearly set out three key areas for the student: Innovation management, managing technology and knowledge and new product development.
Brand Management: A Theoretical and Practical Approach, 1/e Brand Management: A theoretical and

practical approach gives insight into this phenomenon, moving from the history of the brand to how to develop, manage and protect brands. The book takes a decision-making approach to the subject, structured around the decisions a brand or product manager would face when considering their own brand strategy, covering topics such as design, judicial protection, adverse publicity and financial-brand valuation.

Project Management Techniques (College Edition) 2ed is fully updated to include the latest project management processes and methodologies as outlined in the new PMBOK 5ed (2012) and the new APM BoK 6ed (2012). Project Management Techniques for Advanced Project Management courses has been updated to

enable the project manager to use the latest planning and control techniques, processes and methodologies to complete their projects successfully. This is often expressed as completing the project deliverables on time, within budget and to the required quality. It is, therefore, essential the project manager understands the features and characteristics of the project management systems approach to be able to manage the process effectively.
