The first SKLOIS Conference on Information Security and Cryptography (CISC 2005) was organized by the State Key Laboratory of Information Security of the Chinese Academy of Sciences. It was held in Beijing, China, December 15-17, 2005 and was sponsored by the Institute of Software, the Chinese Academy of Sciences, the Graduate School of the Chinese Academy of Sciences and the National

Science Foundation of China. The conference proceedings, representing invited and contributed papers, are published in this volume of Springer's Lecture Notes in Computer Science (LNCS) series. The area of research covered by CISC has been gaining importance in recent years, and a lot of fundamental, experimental and applied work has been done, advancing the state of the art. The program of CISC 2005 covered numerous fields of research within the general scope of the conference. The

International Program  
Committee of the conference  
received a total of 196  
submissions (from 21  
countries). Thirty-three  
submissions were selected for  
presentation as regular papers  
and are part of this volume.  
In addition to this track,  
the conference also hosted a  
short paper track of 32  
presentations that were  
carefully selected as well.  
All submissions were reviewed  
by experts in the relevant  
areas and based on their  
ranking and strict selection  
criteria the papers were

selected for the various  
tracks. We note that stricter  
criteria were applied to  
papers co-authored by program  
committee members. We further  
note that, obviously, no  
member took part in influencing  
the ranking of his or her own  
submissions.

A sui generis autobiography, as it is a rich life story, with many achievements and definite purposes. It is the first of 12 books that the author will incorporate into his Collection called Africa. A story that begins with a lot of faith and prayer, attributes that have accompanied the 62 years of life of Celso Salles, completed on May 28, 2021. In his thoughts that making history is better than accumulating fortunes, in the

pages from this book you can read a summary of what those 62 laps around the sun have been like. There was still a lot to be contacted, which Celso Salles will naturally be putting in the other issues, so that he can transmit in printed format a large series of important information already available in digital format on most of the main platforms existing in the world.

strengthen your skills or enter the field for the first time, Radio Frequency and Microwave Electronics Illustrated is the fastest way to master every key measurement, electronic, and design principle you need to be effective. Dr. Matthew Radmanesh uses easy mathematics and a highly graphical approach with scores of examples to bring about a total comprehension of the subject. Along the way, he clearly introduces everything from wave propagation to impedance matching in transmission line circuits, microwave linear amplifiers to hard-core nonlinear active circuit design in Microwave Integrated Circuits (MICs). Coverage includes: A scientific framework for learning RF and microwaves easily and effectively Fundamental RF and microwave concepts and their applications The characterization of two-port networks at RF and microwaves using S-parameters Use of the Smith Chart to simplify analysis of complex design problems Key design
