For the past five years, Arthur Andersen has been gathering, sorting, and condensing data from the world-class companies it works with to compile its Global Best Practices Database. Now, for the first time, Arthur Andersen shares its understanding of how more than forty best-practices companies focus on their customers, create growth, reduce cost and increase profits.

Managers of any business in any industry can adapt and apply what those companies do best. Unlike other books based merely on limited anecdotal experience, BEST PRACTICES is backed up by 30,000 pages of active, documented data on hundreds of companies worldwide. With information being the most valuable commodity in business this is both comprehensive and cutting edge - it is without peer as an information resource.

With a focus on strategy and implementation, James Chang discusses business management practices and the technology that enables them.

He analyzes the history of process management practices and demonstrates that BPM practices are a synthesis of radical change and continuous change practices. The book is relevant to both business and IT professionals who are presented with an integrated view on how various management practices merge into BPM. This volume describes the many technologies that converge to form a Business Process Management System (BPMS), illustrating its standards and service-oriented architecture.

About the Author James Chang is the founder and president of Ivy Consultants, Inc. He has extensive experience implementing Enterprise Resource Planning (ERP)-enabled business solutions and process-centric integration solutions for Fortune 500 companies. Mr. Chang has written several articles on BPM and EAI. He graduated cum laude with a Bachelor of Science degree in operations research and industrial engineering from Cornell University.

A few years ago there were no books on information technology and business, now there are a great many. To add to that flow calls for courage and judgment on the part of both a potential author and publisher.

Andrew Doswell and Plenum Press are justified in bringing this work into the market. The main reason is that Andrew Doswell has brought to the work some simple yet formidable attributes. The first of these is that he knows what he is talking about. He was trained as an electrical engineer; he then was employed in business, drawing on and fortifying that training, where he moved into an administrative position. Later still he moved into teaching, first in Ireland, then in Scotland, but while employed in education he has not become an academic recluse. On the contrary, he has continued to maintain his links with business, doing so by engaging in both research and consultancy. Within the University he has been at the forefront of our thrust into office automation and office information systems.

Predicting Semiconductor Business Trends After Moore's

The semiconductor industry exhibited life cycles that were longer than the disk drive industry but had the same free market characteristics. Over time this unfettered competition followed trends in a worldwide market that could be quantified and used to predict the future. Over the past forty years or more, I've collected data and made presentations showing how the actual economics and technology of the semiconductor industry can be used to predict its future direction and magnitude. This book is built upon excerpts of presentations made during the last thirty years that analyze the business and technology of the semiconductor industry. In most cases, the figures in the book are copies of the original slides as they were presented during one or more of those presentations. In general, they show how predictable the semiconductor industry has been. They should also provide insight into the future of the industry.
