My journey into this fascinating field of biotechnology started about 26 years ago at a small biotechnology company in South San Francisco called Genentech. I was very fortunate to work for the company that begat the biotech industry during its formative years. This experience established a solid foundation from which I could grow in both the science and business of biotechnology. After my fourth year of working on Oyster Point Boulevard, a close friend and colleague left Genentech to join a start-up biotechnology company. Later, he approached me to leave and join him in of all places – Oklahoma. He persisted for at least a year before I seriously considered his proposal. After listening to their plans, the opportunity suddenly became more and more intriguing. Finally, I took the plunge and joined this entrepreneurial team in cofounding and growing a start-up biotechnology company. Making that fateful decision to leave the security of a larger company was extremely difficult, but it turned out to be the beginning of an entrepreneurial career that forever changed how I viewed the biotechnology industry. Since that time, I have been fortunate to have cofounded two other biotechnology com- nies and even participated in taking one of them public. During my career in these start-ups, I held a variety of positions, from directing the science, operations, regulatory, and marketing components, to subsequently becoming CEO.

When the videocassette recorder was launched on the consumer market in the mid-1970s, it transformed home entertainment. Bringing together complementary but also competing interests from the consumer electronics industry and the film, television and other copyright industries, video created a new sector of media business. Two decades later, DVD reinvented video media for the digital age. DVD provided consumers with an innovative form of entertainment technology and almost instantaneously became the catalyst for a huge boom in the video market. Although the VCR and DVD created major markets for video hardware and software, the video business has been continually shaped by industry conflicts and tensions. Repeatedly the video market has become divided when faced with the introduction of competing formats. Easy reproduction of films and other works on cassette or disc made video software a lucrative market for the copyright industries but also intensified struggles to combat the effects of commercial piracy. 'Video and DVD Industries' examines the business of video entertainment and provides the first study looking at DVD from an industrial perspective. Detailing divisions in the video business, the book outlines industry battles over incompatible formats, from the Betamax/VHS war, to competing laserdisc systems, alternatives such as video compact

disc or Digital Video Express, and the introduction of HDDVD and Blu-ray high-definition systems. Chapters also look at the formation of international markets in the globalization of video media, the contradictory responses of the Hollywood studios to video and DVD, and the legal and technological measures taken to control industrialized video piracy.

Building Network Capabilities in Turbulent Competitive Environments

Since the start of the recent financial crisis, as most global firms struggle to remain competitive, an increasing number of Korean and Japanese firms have experienced an amazing rate of growth and expansion. Although academic researchers and business leaders in the United States, China, Brazil, India, and Europe seek out the secrets to these businesses' success, little is known about their business practices. Supplying an insider's perspective, *Building Network Capabilities in Turbulent Competitive Environments: Practices of Global Firms from Korea and Japan* unveils the strategic and operational practices that have allowed these firms to catch and surpass their competitors in North America and Europe. Based on fieldwork studies and extensive interviews with senior executives, it explains how these companies have developed and enhanced their core competencies through effective integration of product architecture, supply chain management, and IT strategy. The book provides practical insight into changing business patterns while avoiding extensive mathematical algorithms and drawn-out theoretical descriptions. It uses cutting-edge case studies to illustrate the innovative manufacturing strategies of these rapidly emerging companies. Accessible to anyone with a basic understanding of business, it reveals the organizational processes of strategy formulation and implementation that are required for success. Providing a clear understanding of both the career implications of the changing business landscape and how to deliver products and services that meet and exceed the needs

of your customers, this book will help you develop the socio-technical skills needed to succeed in an increasingly competitive and turbulent business environment.

Journalism permeates our lives and shapes our thoughts in ways we've long taken for granted. Whether we listen to National Public Radio in the morning, view the lead story on the Today show, read the morning newspaper headlines, stay up-to-the-minute with Internet news, browse grocery store tabloids, receive Time magazine in our mailbox, or watch the nightly news on television, journalism pervades our daily activities. The six-volume Encyclopedia of Journalism covers all significant dimensions of journalism, including print, broadcast, and Internet journalism; U.S. and international perspectives; history; technology; legal issues and court cases; ownership; and economics. The set contains more than 350 signed entries under the direction of leading journalism scholar Christopher H. Sterling of The George Washington University. In the A-to-Z volumes 1 through 4, both scholars and journalists contribute articles that span the field's wide spectrum of topics, from design, editing, advertising, and marketing to libel, censorship, First Amendment rights, and bias to digital manipulation, media hoaxes, political cartoonists, and secrecy and leaks. Also covered are recently emerging media such as podcasting, blogs, and chat rooms. The last two volumes contain a thorough listing of journalism awards and prizes, a lengthy section on journalism freedom around the world, an annotated bibliography, and key documents. The latter, edited by Glenn Lewis of CUNY Graduate School of Journalism and York College/CUNY, comprises dozens of primary documents involving codes of ethics, media and the law, and future changes in store for journalism education.
