The inspiring, life-changing bestseller by the author of **LEADERS EAT LAST** and **TOGETHER IS BETTER**. In 2009, Simon Sinek started a movement to help people become more inspired at work, and in turn inspire their colleagues and customers. Since then, millions have been touched by the power of his ideas, including more than 28 million who've watched his TED Talk based on **START WITH WHY** -- the third most popular TED video of all time. Sinek starts with a fundamental question: Why are some people and organizations more innovative, more influential, and more profitable than others? Why do some command greater loyalty from customers and employees alike? Even among the successful, why are so few able to repeat their success over and over? People like Martin Luther King Jr., Steve Jobs, and the Wright Brothers had little in common, but they all started with **WHY**. They realized that people won't truly buy into a product, service, movement, or idea until they understand the **WHY** behind it. **START WITH WHY** shows that the leaders who've had the

greatest influence in the world all think, act, and communicate the same way -- and it's the opposite of what everyone else does. Sinek calls this powerful idea **The Golden Circle**, and it provides a framework upon which organizations can be built, movements can be led, and people can be inspired. And it all starts with **WHY**.

PC Mag BoD – Books on Demand

Based on the popular Artech House classic, **Digital Communication Systems Engineering with Software-Defined Radio**, this book provides a practical approach to quickly learning the software-defined radio (SDR) concepts needed for work in the field. This up-to-date volume guides readers on how to quickly prototype wireless designs using SDR for real-world testing and experimentation. This book explores advanced wireless communication techniques such as OFDM, LTE, WLA, and hardware targeting. Readers will gain an understanding of the core concepts behind wireless hardware, such as the radio frequency front-end, analog-to-digital and digital-to-analog converters, as well as various processing technologies. Moreover, this volume includes chapters on timing estimation, matched filtering, frame synchronization message decoding, and source coding. The orthogonal frequency division multiplexing is explained and details about HDL code generation and deployment are provided. The book concludes with coverage of the WLAN toolbox with OFDM beacon reception and the LTE toolbox with downlink reception. Multiple case studies are provided throughout the book. Both MATLAB and Simulink source code are included to assist readers with their projects in the field.
