In May 2001, the Center for Science in the Public Interest (CSPI) broke a major pizza story on the ABC television program 20/20 and once again captured front-page headlines, just as it did when it released studies on movie popcorn and take-out Chinese food. In Restaurant Confidential, Dr. Michael F. Jacobson and his CSPI team do for sit-down meals what their Fast-Food Guide--with 247,000 copies in print--did for fast food. Belgian Waffle or Rib-Eye Steak? Bloomin' Onion or Mrs. Fields's Double-Fudge Brownie? Americans are now eating almost one-third of their meals outside the home, spending $222 billion annually doing so-and watching their waistlines balloon. What's in this food? To answer, CSPI performs across-the-board restaurant profiles that give straight-shooting scientific data on the fat, sodium, and calorie content of the most popular dishes. The information is organized by type of cuisine--Chinese, Mexican, steak house, and more--and covers all the major chains, such as The Olive Garden, Applebee's, and Outback. The book provides specific eating strategies for every kind of restaurant, as well as shocking facts: Did you know that a typical order of stuffed potato skins packs a whopping 1,260 calories and 48 grams--two days' worth--of saturated fat? A 10-point plan for ordering wisely, plus dozens of tips throughout, takes the information one step further by showing how to eat happily and healthfully. It's the nutrition book that reads like a thriller. Take the steak and brownies; a whole fried onion with dipping sauce has a blooming 163 grams of fat, and the seemingly innocent Belgian waffle with whipped topping and fruit has even more fat and calories than two sirloin steaks.

information with WMI and CIM Automate IIS functionality and
manage it using the WebAdministration module In Detail Windows
PowerShell is a task-based command-line shell and scripting
language designed specifically for system administration. Built
on the .NET Framework, Windows PowerShell helps IT
professionals and power users control and automate the
administration of the Windows operating system and applications
that run on Windows. PowerShell is great for batch importing or
deleting large sets of user accounts and will let you collect a
massive amount of detailed system information in bulk via WMI
(Windows Management Instrumentation). Getting Started with
PowerShell is designed to help you get up and running with
PowerShell, taking you from the basics of installation, to
writing scripts and web server automation. This book, as an
introduction to the central topics of PowerShell, covers
finding and understanding PowerShell commands and packaging
code for reusability, right through to a practical example of
automating IIS. It also includes topics such as installation
and setup, creating scripts, automating tasks, and using
Powershell to access data stores, registry, and file systems.
You will explore the PowerShell environment and discover how to
use cmdlets, functions, and scripts to automate Windows
systems. Along the way, you will learn to perform data
manipulation and solve common problems using basic file
input/output functions. By the end of this book, you will be
familiar with PowerShell and be able to utilize the lessons
learned from the book to automate your servers. Style and
approach A practical learning guide, complete with plenty of

Postnatal Clinical, Laboratorial and Radiological Aspects Elsevier Health Sciences

Designed for busy medical students, The Radiology Handbook is a quick and easy reference for any practitioner who needs information on ordering or interpreting images. The book is divided into three parts: - Part I presents a table, organized from head to toe, with recommended imaging tests for common clinical conditions. - Part II is organized under a question and answer format that covers the following topics: how each major imaging modality works to create an image; what the basic precepts of image interpretation in each body system are; and where to find information and resources for continued learning. - Part III is an imaging quiz beginning at the head and ending at the foot. Sixty images are provided to self-test knowledge about normal imaging anatomy and common imaging pathology. Published in collaboration with the Ohio University College of Osteopathic Medicine, The Radiology Handbook is a convenient pocket-sized resource designed for medical students and non radiologists.

ITiB' 2018 is the 6th Conference on Information Technology in Biomedicine, hosted every two years by the Department of Informatics & Medical Devices, Faculty of Biomedical Engineering, Silesian University of Technology. The Conference is organized under the auspices of the Committee on Biocybernetics and Biomedical Engineering of the Polish Academy of Sciences. The meeting has become an established event that helps to address the demand for fast and reliable technologies capable of processing data and delivering results in a user-friendly, timely and mobile manner. Many of these areas are recognized as research and development frontiers in employing new technology in the clinical setting. Technological assistance can be found in prevention, diagnosis, treatment, and rehabilitation alike. Homecare support for any type of disability may improve standard of living and make people' s lives safer and more comfortable. The book includes the following sections: Ø Image Processing Ø Multimodal Imaging and Computer-aided Surgery Ø Computer-aided Diagnosis Ø Signal Processing and Medical Devices Ø Bioinformatics Ø Modelling & Simulation Ø Analytics in Action on the SAS Platform Ø Assistive Technologies and Affective Computing (ATAC)

The focus of this collection of illustrated reviews is to discuss the systems biology of free radicals and anti-oxidants. Free radical induced cellular damage in a variety of tissues and organs is reviewed, with detailed discussion of molecular and cellular mechanisms. The collection is aimed at those new to the field, as well as clinicians and scientists with long standing interests in free radical biology. A feature of this collection is that the material also brings insights into various diseases where free radicals are thought to play a role. There is extensive discussion of the success and limitations of the use of antioxidants in several clinical settings.

This text describes a system of reporting breast fine needle aspiration biopsy that uses five clearly defined categories, each described by a specific term and each with a specific risk of malignancy. The five categories are insufficient/inadequate, benign, atypical, suspicious of malignancy and malignant. Each category has a risk of malignancy and is linked to management recommendations, which include several options because it is recognized that diagnostic infrastructure, such as the availability of core needle biopsy and ultrasound guidance, vary between developed and low and middle income countries. This text includes key diagnostic cytological criteria for each of the many lesions and tumors found in the breast. The cytopathology of specific lesions is illustrated with high quality photomicrographs with clear figure descriptions. Chapters also discuss current and potential future ancillary tests, liquid based cytology, nipple cytology and management. An additional chapter provides an overview of an approach to the diagnosis of direct smears of breast fine needle aspiration biopsies. The International Academy of Cytology Yokohama System for Reporting Breast Fine Needle Aspiration Biopsy Cytopathology provides a clear logical approach to the diagnosis and categorization of breast lesions by FNAB cytology, and aims to facilitate communication with breast clinicians, further research into breast cytopathology and related molecular pathology, and improve patient care.

A book such as this, correlating radiologic findings with the associated gross and microscopic pathologic findings, has never before been offered to the medical community. It contains radiologic images, in a variety of formats (ultrasound, CT scan, MRI scan) correlated with gross photos and photomicrographs of a wide spectrum of pathologic entities, including their variants, occurring in the following organs or anatomic sites. This book would be of particular interest to radiologists and radiologists-in-training, who naturally are very cognizant of radiologic abnormalities, but who rarely, if ever, encounter visual images of the pathologic lesions that they diagnose. It will also be of interest to pathologists and pathologists-in-training, urologists, GU radiation oncologists, and GU medical oncologists.

In recent decades, cytopathology has assumed an increasing role in the primary diagnosis of mass lesions owing to its ability to deliver rapid, non-invasive, and timely information. This book provides a comprehensive overview of the role of cytology at various body sites. The diagnostic details covered are abbreviated in comparison with those in pathology texts. Instead, a more clinical approach is taken, with the focus on the advantages and limitations of techniques and the key features of entities that are important to clinicians. Pathological– clinical correlation is highlighted throughout the book, ensuring that it will be highly relevant for clinicians. In particular, physicians who deal with oncology patients will find it to be a rich source of guidance on how to use and understand cytopathology in the diagnosis and exclusion of malignancy.

Abrams' Angiography Emergency Ultrasound, Second Edition

The pioneering emergency ultrasound guide-updated and expanded with coverage of the newest technologies ,/p> Emergency Ultrasound is firmly established as the first state-of-the-art reference on the training, techniques, and diagnostic skills needed to perform successful ultrasound exams in the emergency department. Utilizing a templated chapter format, this trusted resource presents a wide range of detailed guidelines on performing ultrasound exams, case studies, and side-by-side comparisons of normal and abnormal scans. Emergency Ultrasound, Second Edition, is fully updated and expanded to include the latest uses of this crucial diagnostic tool, including Doppler Ultrasound for deep vein thrombosis. Taken together, this groundbreaking text is the one you'll rely on for every kind of diagnosis in the emergency setting, from soft tissue infections and peritonsillar abscess, to foreign bodies and lumbar puncture and arthrocentesis. Features: NEW! Chapters on ocular applications, prehospital applications, and ultrasound-guided procedures NEW! Content that features the latest instruments NEW! Numerous color Doppler images, plus hundreds of traditional black and white ultrasound images NEW! DVD with videos showing the most current ultrasound procedures performed in real time Coverage of ultrasound in trauma, cardiac, hepatobiliary, renal, testicular, and other applications A templated chapter organization that consists of key points; introduction; clinical considerations and indications; anatomic considerations; technique; common abnormalities; pitfalls; case studies; references; and more Focus on common findings and pitfalls in every clinical chapter Case studies in each chapter

The advent of small, affordable ultrasound machines and the widespread use of PACS systems have made imaging more accessible to anaesthetists and intensivists than ever before. This concise, highly illustrated text discusses the key aspects of radiology, examining all imaging modalities and body regions. Introductory sections review the imaging knowledge required for the FRCA exams and the role of imaging in the Pre-Operative Assessment. These are followed by chapters on each imaging modality and body region, each containing numerous illustrations, practical advice on diagnosis, and many case illustrations. Each modality chapter contains a concise introductory section on the principles of image formation. Containing over 300 scans and illustrations, and written by a multidisciplinary team of radiologists and anaesthetists, Radiology for Anaesthesia and Intensive Care, second edition, is an invaluable aid for all anaesthetists and intensivists.
