This Report deals with matters arising from a complaint against Rt Hon Denis MacShane made on 29 June 2008, relating to expense

claims made between 2005 and 2008. The Committee agreed that the conduct of Mr MacShane should be reported to the Metropolitan Police, though the police decided as a result of their inquiries to take no action. The Report states that this was the gravest case which has come to the Committee for adjudication. It sets out the Committee's views and reasoning clearly, and is accompanied by the detailed memorandum from the Parliamentary Commissioner for Standards, as well as Mr MacShane's response. The Committee concluded that Mr MacShane was in breach of the Code of Conduct in withdrawing his co-operation by declining at the conclusion of this inquiry to attend an interview and to answer a specific question about his invoices. He was also in breach of the Green

techniques of large data sets. After describing data mining, this edition explains the methods of knowing, preprocessing, processing, and warehousing data. It then presents information about data warehouses, online analytical processing (OLAP), and data cube technology. Then, the methods involved in mining frequent patterns, associations, and correlations for large data sets are described. The book details the methods for data classification and introduces the concepts and methods for data clustering. The remaining chapters discuss the outlier detection and the trends, applications, and research frontiers in data mining. This book is intended for Computer Science students, application developers, business professionals, and researchers who seek information on data mining. Presents dozens of algorithms and implementation examples, all in pseudo-code and suitable for use in real-world, large-scale data mining projects. *Data Mining: Concepts and Techniques*  
An Integrated Approach to Product Development Reliability Engineering presents an integrated approach to the design, engineering, and management of reliability activities throughout the life cycle of a product, including concept, research and development, design, manufacturing, assembly, sales, and service. Containing illustrative guides that include worked problems, numerical

examples, homework problems, a solutions manual, and class-tested materials, it demonstrates to product development and manufacturing professionals how to distribute key reliability practices throughout an organization. The authors explain how to integrate reliability methods and techniques in the Six Sigma process and Design for Six Sigma (DFSS). They also discuss relationships between warranty and reliability, as well as legal and liability issues.

---

Other topics covered include:  
Reliability engineering in the 21st Century  
Probability life distributions for reliability analysis  
Process control and process capability  
Failure modes, mechanisms, and effects analysis  
Health monitoring and prognostics  
Reliability tests and reliability estimation  
Reliability Engineering provides a comprehensive list of references on the topics covered in each chapter. It is an invaluable resource for those

interested in gaining fundamental knowledge of the practical aspects of reliability in design, manufacturing, and testing. In addition, it is useful for implementation and management of reliability programs.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State

---

Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective

methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Robert J. Blackwell Assistant Secretary for Maritime Affairs
