"This book is about the
people I met as I
crisscrossed Australia by
train and plane and L-plated

car: the undefeated dreamers
and wild-hearted romantics,
the obsessed hobbyists and
beautiful failures. It is
about heroes and legends,
illusions, delusions and
hope, and one or two men with
shit for brains who ought to
be locked up." As anyone
who's ever read Mark Dapin's
column and features in Good
Weekend knows, he's an
immensely funny, acute and
vivid observer of Australian
life. In *Strange Country*, he
takes us on a journey through
a very different Australia -
a country that's eccentric,
puzzling, big-hearted, small-

minded, nostalgic and
sometimes just plain mad.
From the last travelling
boxing tent to feral urban
sewer rats to Vietnam Veteran
bikies and the annual Parkes
Elvis Festival, his writing
illuminates the stranger side
of Australian life in a
travel book like no other.

-CONFUCIUS A well written, organized, and
concise survey is an important tool in any
newly emerging field of study. This present
text is the first of a new series that has been
established to promote the publications of such
survey books. A survey serves several needs.
Virtually every new research area has its roots
in several diverse areas and many of the initial

fundamental results are dispersed across a wide range of journals, books, and conferences in many different sub fields. A good survey should bring together these results. But just a collection of articles is not enough. Since terminology and notation take many years to become standardized, it is often difficult to master the early papers. In addition, when a new research field has its foundations outside of computer science, all the papers may be difficult to read. Each field has its own view of elegance and its own method of presenting results. A good survey overcomes such difficulties by presenting results in a notation and terminology that is familiar to most computer scientists. A good survey can give a feel for the whole field. It helps identify trends, both successful and unsuccessful, and it should point new researchers in the right direction.
