Diabetes and cardiovascular disease together account for the largest portion of health care spending compared to all other diseases in Western society. This work seeks to provide an understanding of the causes of diabetes and its cardiovascular complications. As this understanding becomes more widely appreciated, it will serve as a foundation for evidence-

based care and wider acceptance of sound science. The International Conference on Diabetes and Cardiovascular Disease, held in Winnipeg, in June 1999, was organized to bring together a multi-disciplinary group of researchers dedicated to further knowledge amongst researchers, care givers, and the managers of the health system. The invited speakers submitted their works for publication, which serves as the basis for this book. Major themes include: epidemiology of diabetes mellitus, metabolic risk factors in diabetes and cardiovascular disease, hypertension in diabetes mellitus, cardiac function in diabetes, glycemic control and improved cardiovascular function,

diabetes management, and endothelial function in diabetes.

Air source heat pumps are mainly used for space heating, and have the advantages of environmental protection, energy saving, and comfort. Written by leading heat pump technology expert Hui Huang, this book summarizes the research and applications of variable volume ratio two-stage vapor compression air source heat pump technology, and its use in cold climate regions. This book can be used for reference by scientific researchers and engineers engaged in research on air source heat pump technology, product development and popularization; and by energy management and policy researchers. It will also be of value to undergraduate and graduate students studying

these areas of technology.

This new book provides a total solution for learning and teaching embedded system design based on the Freescale HCS12/9S12 microcontroller. Readers will learn step-by-step how to program the HCS12 using both assembly and C languages, as

well as how to use such development tools as CodeWarrior, ImageCraft ICC12, MiniIDE, GNU C, and EGNU IDE. Supportive examples clearly illustrate all applications of the HCS12 peripheral functions, including parallel port, timer functions, PWM, UART port, SPI, I2C, CAN, on-chip flash and EEPROM programming, external memory expansion, and more. New sections on C programming style, software development methodology, and software reuse have

been added in this revision. A back-of-book CD contains the source code for all examples in the book, several groups of reusable utility functions, and complimentary freeware development tools for improved learning.

focus is an exploration of BDSM experience as it emerges from the complex interactions of kink activities and relationship. Experiences categorised by BDSM practitioners as 'religious' and 'spiritual' are commonly described in the same terms, and given the same value, as descriptions of experiences which are not so categorised. Play, Pain and Religion examines practitioner accounts of BDSM experience alongside those practitioners' personal identification with these terms. This book argues that the significance of a given experience is not located solely within any intrinsic quality ascribed to it but in subsequent constructions around the nature and meaning of the event. It examines some such constructions, moving away from absolute definitions of religion or religions to consider the religious as an active process of meaning-, world- and story-making. By using this

'religioning' framework, this book examines ways in which BDSM can potentially be used in such processes. Play, Pain and Religion is a valuable resource for scholars of religion and of kink, for people interested in the complexities of ascribing meaning and value to human behaviour, and for kinksters interested in their own kink and why it is they do what they do.

"A robust national
nuclear safety
infrastructure is
essential for the
deployment of the

plant. A major challenge in this process is the development of an effective legal and governmental framework for safety, including an independent regulatory body. This publication supplements existing guidance in the IAEA safety standards on the development of an effective safety infrastructure and provides further assistance to new entrant regulatory bodies on the key challenges they will face throughout the life cycle of the first nuclear power plant. The

publication focuses on the phases of a nuclear power deployment programme from the granting of a license for construction to granting the license for commissioning and operation."--Publisher's description.

The highly popular first volume on *The MACS-Lift Short-Scar Rhytidectomy*, by Drs. Patrick Tonnard and Alexis Verpaele, introduces surgeons to an exciting new concept in facial rejuvenation—one that offers shorter incisions, minimal morbidity, and reduced recovery

time. In the second volume, Short-Scar Face Lift: Operative Strategies and Techniques, Drs. Tonnard and Verpaele build on that foundation and expand their scope. Together, Volumes I and II will give you the complete information you need for mastering optimal facial rejuvenation and providing your patients with the benefits of a short-scar face lift. It's a win-win situation for all! Volume I: The MACS-Lift Short-Scar Rhytidectomy By Patrick Tonnard, MD; Alexis Verpaele, MD Volume I provides the foundation for the MACS-lift technique. This four-color semi-atlas describes and illustrates every step leading to the mastery of this vertical-vector face-lift. An accompanying DVD begins with an animated overview that highlights key steps for the operation; this is followed by an operative video that guides the viewer through the entire procedure. Volume II: Short-Scar Face Lift: Operative Techniques and Strategies Edited by Patrick Tonnard, MD; Alexis Verpaele, MD The second volume represents the next stage in short-scar face-lift technique and a convergence of new modalities to enhance the results of facial rejuvenation. Drs. Tonnard and Verpaele

are joined by leading experts who share their insights and technical pearls on short-scar face lifting. In addition, they discuss ancillary procedures, such as the temporal brow lift and neck lift, to enhance the overall result. An accompanying DVD provides operative video of the MACS-lift, the short-scar temporal lift, microfat grafting, and erbium-YAG laser resurfacing.

The fifth international Conference in Medical Image Computing and Computer Assisted Intervention (MICCAI

2002) was held in Tokyo from September 25th to 28th, 2002. This was the first time that the conference was held in Asia since its foundation in 1998. The objective of the conference is to offer clinicians and scientists the opportunity to collaboratively create and explore the new medical field. Specifically, MICCAI offers a forum for the discussion of the state of art in computer-assisted interventions, medical robotics, and image processing among experts from multi-disciplinary professions, including but not limited to clinical doctors, computer

scientists, and mechanical and biomedical engineers. The expectations of society are very high; the advancement of medicine will depend on computer and device technology in coming decades, as they did in the last decades. We received 321 manuscripts, of which 41 were chosen for oral presentation and 143 for poster presentation. Each paper has been included in these proceedings in eight-page full paper format, without any differentiation between oral and poster papers. Adherence to this full paper format, along with the increased number of manuscripts,

surpassing all our expectations, has led us to issue two proceedings volumes for the first time in MICCAI's history. Keeping to a single volume by assigning fewer pages to each paper was certainly an option for us considering our budget constraints. However, we decided to increase the volume to offer authors maximum opportunity to argue the state of art in their work and to initiate constructive discussions among the MICCAI audience.

Create your own robots, toys, remote controllers, alarms, detectors, and more with the Arduino device. This simple microcontroller has become popular for building a variety of objects that interact with the physical world. These recipes

provide solutions for the most common problems and questions Arduino users have. *Device and Circuit Cryogenic Operation for Low Temperature Electronics* Springer Embedded Microcomputer Systems: Real Time Interfacing provides an in-depth discussion of the design of real-time embedded systems using 9S12 microcontrollers. This book covers the hardware aspects of interfacing, advanced software topics (including interrupts), and a systems approach to typical embedded applications. This text stands out from other microcomputer systems books because of its balanced, in-depth treatment of both hardware and software issues important in real time

embedded systems design. It features a wealth of detailed case studies that demonstrate basic concepts in the context of actual working examples of systems. It also features a unique simulation software package on the bound-in CD-ROM (called Test Execute and Simulate, or Texas, for short) - that provides a self-contained software environment for designing, writing, implementing, and testing both the hardware and software components of embedded systems.
