Supply Chain Optimization illustrates how companies that create, distribute, and sell products or services can join forces to establish a supply network with an unbeatable competitive advantage. Poirier and Reiter explain how companies can successfully employ partnering, rather than working on improvements in isolation, to identify high opportunity initiatives across a total supply network. By applying key resources on focused opportunities and sharing the resulting savings, members of the network get larger results, faster, as well as funding for future efforts. At the heart of Poirier's and Reiter's plan is a four-step model to mobilize joint effort and focus resources from suppliers, manufacturers, distributors, and retailers on initiatives that have a high pay-back potential. The authors have studied the successes of such influential retailers as Wal-Mart, K-Mart, Target, and Sears, all of which are laying the groundwork for how to use point-of-sale data to create quick-response alliances with selected suppliers who will take responsibility for replenishing stock to predetermined levels. Supply Chain Optimization explains how to develop such effective partnering techniques and demystifies the electronic data linkages that are necessary to make them work.

Supply Chain Optimization offers survival tools for companies of all sizes. The authors describe consortiums, or "share groups," of smaller companies that can compete with the volume leverage of large corporations, superstores, and warehouse stores. By analyzing their shared supply chain and pooling their available resources, these consortiums can find hidden savings to protect their profit margins and remain competitive in today's marketplace. The book includes case studies that show what a wide range of companies are actually doing to achieve supply chain optimization. Companies profiled include: Financing Division of General Electric, Dial Corporation, Proctor & Gamble, Baxter Healthcare Corporation, Navistar/Goodyear, Packaging Corporation of America, Dominick's, Hart Mountain Corporation, and General Motors--Saturn. Partnering requires more than technological expertise. Successful partnerships display high levels of cooperation expressed by the sharing of resources, time, energy, and the benefits achieved. Poirier and Reiter describe the many pitfalls that must be avoided, and create a vision of how firms can build on their existing supply initiatives to gain a greater competitive advantage in today's business world.

During the recession (1999-2004), the United States allowed a million people to enter the country to fill highly skilled positions for which, it was said, no skilled American workers could be found. These positions included motel managers, teachers, even an assistant women's volleyball coach! With over 8 million American citizens looking for work, employers felt that they had to go outside the United States to find workers with the skills and qualifications to fill these and dozens of other positions. Did you know that if someone is caught trying to enter the United States with a phony or stolen passport, the passport is returned to that person, who is then released? In *Up 2 Cents a Share Down 8 Million Jobs*, Dan Geoffrey takes you along on his journey of discovery to learn how immigration has affected not only our nation's jobs, but also our national security.
