Different cultures today and in different epochs have given a variety of answers to this question. It may seem self evident that every individual owns and has sovereignty over his or her own body parts, such as the head, legs, nose, stomach, pancreas, and other body parts. The sex organs, however, seem to be an

exception. Even though they are as much an integral part of the individual as a leg or a liver, the sex organs are unique in that many cultures have established laws and taboos over the use and even the mere display of the sex organs. Thus, certain cultures have placed constraints over the individual's ownership of his or her sex organs and actively regulate and restrict the individual's access and use of those organs. In other cultures, the question of ownership of the sex organs is more decisively answered. In any culture where circumcision to any degree of either the male or female is practiced, permitted, encouraged, or even merely tolerated, it is clear that the individual is not considered to own his own sex organs. In the United States today, the medical establishment has created an is considered acceptable and desirable that anyone for environment

A major biography of arguably New Zealand's greatest modern political

leader As Norman Kirk's body lay in state near the steps of Parliament on the day after his death on 31 August 1974, a kaumatua wailed 'the mighty totara has fallen'. The lament reflected what many New Zealanders felt about this big, commanding and loved leader, dead at just 51. More than 30,000 people filed past Kirk's casket over two days, and again in Christchurch, in a commemoration that matched only Michael Joseph Savage's for emotional power. Both men died in office, both men were humanitarians. Kirk also worked to move the Labour Party away from its cloth-cap heritage to embrace a much broader electoral compass, for it to become, in his words, 'the natural party of New Zealand'. Prime Minister of New Zealand between November 1972 and August 1974, Kirk's childhood was blighted with poverty, yet he thrived. He moved into a succession of manual trades, before booming into local body politics. His political rise was rapid, from mayor of Kaiapoi at the age of 30 to leader of the Labour Party within a few years. This book examines

---

Kirk's political leadership; his successes, especially his stunning performances on the international stage, but also his later difficulties when the country's economy was rocked by international oil shocks. He deferred the 1973 Springbok tour and sent warships into the French nuclear testing zone near Mururoa Atoll, his government set up ohu and the established the DPB. He was New Zealand's first truly regionalist Prime Minister, drawing New Zealand closer to Asia and the Pacific, as the ties to 'mother Britain' slowly loosened. This landmark book takes the full measure of the remarkable New Zealander who was our last working-class Prime Minister.

Studyguide for Principles of Human Anatomy 11e by Tortora, Gerard J. Cram101 The work of a sports therapist is highly technical and requires a confident, responsible and professional approach. An Introduction Wiley Global Education Excavations over many years in the Peruvian Andes and coastal regions have revealed that the village settlements on the west coast of South America were one of the early centers of world civilization. One of these settlements, La Galgada, flourished from 3000 B.C. to 1700 B.C. Its extraordinarily complete cultural remains help to reconstruct a picture of human life, health, activities, and trade relations as they were 4,000 years ago and allow us to enter the mental and artistic life of this early civilization. The location of La

Galgada on Peru's Tablachaca River midway between the highlands and the coast caused it to be influenced by the culture of both those regions. The remains found at La Galgada tie together important textile collections from the coastal region with important architectural remains from the Andean highland to give a picture of a complete preceramic culture in ancient Peru. Numerous illustrations provide an exciting visual catalog of the finds at La Galgada. What also makes La Galgada such a significant site are the changes in art and architecture that can be documented in considerable detail from about 2500 B.C. to about 1700 B.C. During that period, La Galgada and the other preceramic communities in northern Peru were transformed with a rapidity that must have seemed shocking and revolutionary to their inhabitants. These changes record the first appearance of the powerful and

---

intimidating Chav í n culture that was to dominate the region for the next thousand years. They also allow us to watch a people change and adapt as they try to cope with the powerful pressure of technical and social development in their region.

of the 21st century, costume might be compared to a constantly moving river. This river divides into many narrower channels that separate, cross, come together, and separate again, and yet that river continually moves on." Building on the previous editions, the authors update their analysis of *Western dress to 2008. Survey of Historic Costume* has, from its beginnings, taken seriously the need to accompany the text with appropriate illustrations and the major change in the 5th Edition is the move to full color throughout the book to enrich the text and the concepts. Perfect for anyone interested in historic costume, fashion, textiles, drama, and design, this beautifully illustrated book is full of interesting facts and commentary. The Australide orogen, the southern hemisphere Neoproterozoic to Mesozoic terrane accretionary orogen that forms the palaeo-Pacific margin of Gondwana, is one of the largest and longest-lived orogens on Earth. This book brings together a series of reviews and multidisciplinary research papers that comprehensively cover the Australides from the Tasman orogen of eastern Australia to the Neoproterozoic and Palaeozoic orogens of South America, taking in New Zealand and Antarctica along the way. It deals with the evolution of the southern Gondwana margin, as it grew during a series of terrane accretion episodes from the late Proterozoic through to final fragmentation in mid-Cretaceous times. Global perspectives are given by comparison with the Palaeozoic northern Gondwana margin and

documentation of world-wide terrane accretion episodes in the Late Triassic-Early Jurassic and mid-Cretaceous. The Tasmanides of eastern Australia, and the terrane histories of New Zealand and southern South America are given comprehensive up-to-date reviews.
