The WHO Guidelines on Hand Hygiene in Health Care provide health-care workers (HCWs), hospital administrators and health authorities with a thorough review of evidence on hand hygiene in health care and specific recommendations to improve practices and reduce transmission of pathogenic microorganisms to patients and HCWs. The present Guidelines are intended to be implemented in any situation in which health care is delivered either to a patient or to a specific group in a population. Therefore, this concept applies to all settings where health care is permanently or occasionally performed, such as home care by birth attendants. Definitions of health-care settings are proposed in Appendix 1. These Guidelines and the associated WHO Multimodal Hand Hygiene Improvement Strategy and an Implementation Toolkit (<http://www.who.int/gpsc/en/>) are designed to offer health-care facilities in Member States a conceptual framework and practical tools for the application of recommendations in practice at the bedside. While ensuring consistency with the Guidelines recommendations, individual adaptation according to local regulations, settings, needs, and resources is desirable. This extensive review includes in one document sufficient technical information to support training materials and help plan implementation strategies. The document comprises six parts.

The book provides a detailed and practical description of how companies can put purpose into practice in their organizations. Based on a ground-breaking research project on the Economics of Mutuality undertaken jointly by the Saïd Business School at the University of Oxford and Mars Catalyst, the think tank of Mars Inc., the food and beverages company, over a period of five years, the book describes how purpose promotes business growth and performance. In particular, it gives a highly accessible and readable account of how companies can determine and implement their corporate purposes, and how, by so doing, they address critical issues in their ecosystems, such as rising inequality and environmental degradation, while delivering superior performance and resilience. The book will equip executives, managers, investors, policymakers, academics, and students with tools to understand the way in which companies can build purpose-centric businesses, map and orchestrate stakeholder ecosystems, identify untapped resources, create unconventional partnerships, measure and manage performance beyond financial reporting, and adopt a new definition of profit to promote corporate purposes. The book includes fourteen case studies of companies of varying sizes, sectors, and geographies that sought to put purpose into practice. They provide deep insights into the way in which companies have delivered corporate purpose and the challenges they faced in doing this. The book stresses both the opportunity and obligation on business to reposition itself to address the changing needs of society and the planet in the twenty-first century.

WHO Guidelines on Hand Hygiene in Health Care Open Book Publishers

One of the most vexing issues that has faced the international community since the end of the Cold War has been the use of force by the United Nations peacekeeping forces. UN intervention in civil wars, as in Somalia, Bosnia and Herzegovina, and Rwanda, has

thrown into stark relief the difficulty of peacekeepers operating in situations where consent to their presence and activities is fragile or incomplete and where there is little peace to keep. Complex questions arise in these circumstances. When and how should peacekeepers use force to protect themselves, to protect their mission, or, most troublingly, to ensure compliance by recalcitrant parties with peace accords? Is a peace enforcement role for peacekeepers possible or is this simply war by another name? Is there a grey zone between peacekeeping and peace enforcement? Trevor Findlay reveals the history of the use of force by UN peacekeepers from Sinai in the 1950s to Haiti in the 1990s. He untangles the arguments about the use of force in peace operations and sets these within the broader context of military doctrine and practice. Drawing on these insights the author examines proposals for future conduct of UN operations, including the formulation of UN peacekeeping doctrine and the establishment of a UN rapid reaction force.

This book provides the first attempt to synthesise what is a pervasive phenomenon, and one that is mentioned tangentially in many political analyses, but nowhere receives the systematic and theoretical treatment that its significance to the working of 'democratic' political practice deserves. It will thus be a volume that should interest a range of scholars in government and political theory, in comparative politics and communications.
