## Popular Mechanics

From Motorbooks, the leader in automotive publishing for over 4 decades, comes the most practical car care guide ever produced to help the average car owner maintain and repair his or her vehicle - How to Repair Your Car. In this easy-to-follow guide, author Paul Brand, a nationally known automotive expert, takes you through the steps of auto maintenance and repair—simple steps that could add years to a car's life and save a driver thousands of dollars in repairs. This is also the only car maintenance and repair guide on the market to contain 50 do-it-yourself projects in full-color, step-by-step instructions that are easy to follow and understand. Focusing on post-1985 cars (with occasional explanations about earlier models), Brand introduces readers to the rudiments of automotive systems—from electrical, fuel, and cooling to drivetrain, suspension, tires, brakes, and exhaust—and discusses problems that arise in each system. The book includes practical advice for readers with only a passing knowledge of cars, as well as the basics of caring for a car's exterior and interior. How to Repair Your Car is a must-have for any car owner who wants to extend the life of his or her car, learn how to perform car maintenance or repair instead of paying a mechanic, diagnose simple noises and knocks, as well as learn tips for knowing exactly what they're paying for when their car goes to the shop.

## Toyota Prado 1996-2008 Automobile Repair Manual

In the current environment of severe global competition, an uncertain business future as well as shorter product life cycles, companies have a pressing need to develop new products and businesses rapidly. In this book, Professor Yasuhiro Monden expounds on his theories about inter-firm networks and incentive price systems as important mechanisms to encourage innovation. The author has coined the term

incentive price system to explain profit allocation systems which will motivate inter-firm collaboration to develop new customer-pleasing products or businesses. He notes that such a comprehensive concept of incentive price has not been studied in conventional economics but is invaluable for solving various profit allocation problems. The theories in the book are richly illustrated by many case studies from the automobile, auto-parts, smartphone, semiconductor, convenience store and nuclear power electricity industries. Examples from the automobile industry account for more than half of the case studies because the author has accumulated much practical knowledge and experience from research and related activities in the Japanese automobile industry over several decades. This book will be of interest to researchers and practitioners of lean or just-in-time production, as well as those involved in related areas such as managerial accounting, managerial economics, corporate finance, organization theory and cooperative game theory.
