Features & Benefits. Designed with grooved pins to hold the camshaft pulley stationary while loosening and tightening the center shaft bolt; While useful on most Asian overhead cam engines, it is most needed on transverse mounted V6 engines such as the VG30 used in Nissan Maximas as well as the 3VZFE and IMZFE engines used in Toyota Camrys

If the idler pulley fails, there will be a very audible chirping noise from the front of the engine. This is because the idler pulley bearing is no longer smooth. If it is not changed

immediately, the engine will be running roughly, or stall completely, and internal engine damage may occur due to slippage or breakage of the timing belt.
