This open access book addresses a wide variety of events and technologies concerning the sago palm, ranging from its botanical characteristics, culture and use to social conditions in the places where it is grown, in order to provide a record of research findings and to benefit society. It discusses various subjects, including the sago palm and related species; differentiation of species of starch-producing palm; habitat, morphological, physiological and growth characteristics; culture and management; productivity of carbon dioxide; starch extraction and manufacture; characteristics and utilization of starch; and cultural anthropological and folkloristic aspects. Problems such as food shortages due to increasing populations, global warming and climate change, and decreasing reserves of oil and other underground resources, have become more pressing in recent years. In the context of these problems, the book examines the role of the sago palm in sustainable food production, in the manufacture of other foodstuffs, as a raw material for ethanol and in the manufacture of biodegradable plastics. In addition to academics, this book will be useful to researchers and government officials working for international agencies, national governments, municipalities, and other research organizations; technicians, researchers, managers, entrepreneurs, and others working in industries such as agriculture, plant production, food production, manufacturing, chemical engineering, energy production, and distribution.

When Ford launched the Mustang, it created an automotive revolution. Award-winning designer and stylist Gale Halderman was at the epicenter of the action at Ford, and, in fact, his initial design sketch formed the basis of the new Mustang. He reveals his involvement in the project as well as telling the entire story of the design and development of the Mustang. Authors and Mustang enthusiasts James Dinsmore and James Halderman go beyond the front doors at Ford into the design center, testing grounds, and Ford facilities to get the real, unvarnished story. Gale Halderman offers a unique behind-the-scenes perspective and firsthand account of the inception, design, development, and production of the original Mustang. With stinging losses from the Edsel fresh in minds at Ford, the Mustang project was an uphill battle from day one. Lee Iacocca and his assembled team had a herculean task to convince Henry Ford II to take a risk on a new concept of automobile, but with the help of Hal Sperlich ' s detailed market research, the project received the green light. Henry Ford II made it clear that jobs were on the line, including Iacocca ' s, if it failed. The process of taking a car from sketch to clay model to prototype to preproduction and finally finished model is retraced in insightful detail. During the process, many fascinating experimental cars, such as the Mustang I two-seater, Mustang II prototype, Mustang Allegro, and Shorty, were built. But eventually the Mustang, based on the existing Ford Falcon, received the nod for final production. In a gala event, it was unveiled at the 1964 World ' s Fair in New York. The Mustang received public accolades and critical acclaim, and soon it became a runaway hit. After the initial success, Ford designers and Gale Halderman designed and developed the first fastback Mustangs to compliment the coupes. The classic Mustang muscle cars to follow, including the GT, Mach 1, and others, are profiled as well. The Mustang changed automotive history and ushered in the pony car era as a nimble, powerful, and elegantly styled sports coupe. But it could so easily have stumbled and wound up on the scrap pile of failed new projects. This is the remarkable and dramatic story of how the Mustang came to life, the demanding design and development process, and, ultimately, the triumph of the iconic American car.

Much has been written in the West on the history of the Soviet space program but few Westerners have read direct first-hand accounts of the men and women who were behind the many Russian accomplishments in exploring space. The memoirs of Academician Boris Chertok, translated from the original Russian, fills that gap. This official NASA history series document has been converted for accurate flowing-text e-book format reproduction. In this Volume 2, Chertok takes up the story with the development of the world's first intercontinental ballistic missile (ICBM) and ends with the launch of Sputnik and the early Moon, Mars, and Venus probes. His engaging accounts of these dramatic and historic years reveal repeated failures, technical problems, and governmental struggles that marked the opening of the space race in the Soviet Union. An extensive technical discussion provides new details about the tragic Nedelin Disaster in October 1960 which killed over 100 workers attempting to launch an ICBM. Chertok calls it most horrific disaster in the history of missile and space technology. Contents: Three New Technologies, Three State Committees * The Return * From Usedom Island to Gorodomya Island * Institute No. 88 and Director Gonor * The Alliance with Science * Department U * Face to Face with the R-1 Missile * The R-1 Missile Goes Into Service * Managers and Colleagues * NII-885 and Other Institutes * Air Defense Missiles * Flying by the Stars * Missiles of the Cold War's First Decade * On the First Missile Submarine * Prologue to Nuclear Strategy * The Seven Problems of the R-7 Missile * The Birth of a Firing Range * 15 May 1957 * No Time for a Breather * Mysterious Illness * Breakthrough into Space * Flight-Development Tests Continue * The R-7 Goes into Service * From Tyuratam to the Hawaiian Islands and Beyond * Lunar Assault * Back at RNII * The Great Merger * First School of Control in Space * Ye-2 Flies to the Moon and We Fly to Koshka * The Beginning of the 1960s * "Onward to Mars...and Venus" * Catastrophes Chertok began his career as an electrician in 1930 at an aviation factory near Moscow. Twenty-seven years later, he became deputy to the founding figure of the Soviet space program, the mysterious "Chief Designer" Sergey Korolev. Chertok's sixty-year-long career and the many successes and failures of the Soviet space program constitute the core of his memoirs, Rockets and People. In these writings, spread over four volumes, Academician Chertok not only describes and remembers, but also elicits and extracts profound insights from an epic story about a society's quest to explore the cosmos. NASA issued a statement about the passing of this pioneer: Russian rocket designer Boris Yevseyevich Chertok, one of the founding fathers of the Russian space program, passed away on Dec. 14, 2011 at the age of 97. We share the loss of Boris Chertok with our Russian colleagues," said Bill Gerstenmaier, NASA associate administrator for Human Exploration and Operations. "He was he a spaceflight pioneer and an inspiration to everyone associated with spaceflight. I remember him coming into the control center in Moscow in the middle of the night at the age of 97. He was an inspiration to every flight controller in Moscow. I also remember fondly sitting in Korolev's apartment in Moscow, now a museum, and having Boris describe meetings with Korolev, the general designer, at his kitchen table. The passion in Boris' eyes and voice gave me a unique insight into the Russian team and operations. Boris's speech this year at the 50th anniversary of Gagarin's flight was amazing and awe inspiring. His books and memoirs are a true treasure. He was a friend of NASA and he will be missed. His spirit will live on in the hearts of the Russian and American human spaceflight team."

Illustrated Plymouth and DeSoto Buyer's Guide Cambridge University Press Written by a practicing emergency physician, The White Coat Investor is a high-yield manual that specifically deals with the financial issues facing medical students, residents, physicians, dentists, and similar high-income professionals. Doctors are highly-educated and extensively trained at making difficult diagnoses and performing life saving procedures. However, they receive little to no training in business, personal finance, investing, insurance, taxes, estate planning, and asset protection. This book fills in the gaps and will teach you to use your high income to escape from your student loans, provide for your family, build wealth, and stop getting ripped off by unscrupulous financial professionals. Straight talk and clear explanations allow the book to be easily digested by a novice to the subject matter yet the book also contains advanced concepts specific to physicians you won't find in other financial books. This book will teach you how to: Graduate from medical school with as little debt as possible Escape from student loans within two to five years of residency

This open access book covers all facets of entity-oriented search—where “ search ” can be interpreted in the broadest sense of information access—from a unified point of view, and provides a coherent and comprehensive overview of the state of the art. It represents the first synthesis of research in this broad and rapidly developing area. Selected topics are discussed in-depth, the goal being to establish fundamental techniques and methods as a basis for future research and development. Additional topics are treated at a survey level only, containing numerous pointers to the relevant literature. A roadmap for future research, based on open issues and challenges identified along the way, rounds out the book. The book is divided into three main parts, sandwiched between introductory and concluding chapters. The first two chapters introduce readers to the basic concepts, provide an overview of entity-oriented search tasks, and present the various types and sources of data that will be used throughout the book. Part I deals with the core task of entity ranking: given a textual query, possibly enriched with additional elements or structural hints, return a ranked list of entities. This core task is examined in a number of different variants, using both structured and unstructured data collections, and numerous query formulations. In turn, Part II is devoted to the role of entities in bridging unstructured and structured data. Part III explores how entities can enable search engines to understand the concepts, meaning, and intent behind the query that the user enters into the search box, and how they can provide rich and focused responses (as opposed to merely a list of documents)—a process known as semantic search. The final chapter concludes the book by discussing the limitations of current approaches, and suggesting directions for future research. Researchers and graduate students are the primary target audience of this book. A general background in information retrieval is sufficient to follow the material, including an understanding of basic probability and statistics concepts as well as a basic knowledge of machine learning concepts and supervised learning algorithms.

at the distributed virtual Program Committee meeting. Each paper's review recommendations were carefully checked for consistency; in many instances, the Vice Chairs read the papers themselves when the reviews did not seem sufficient to make a decision. Throughout the reviewing process, I received a tremendous amount of help and advice from General Co-chair Manish Parashar, Steering Chair Viktor Prasanna, and last year's Program Chair Srinivas Aluru; I am very grateful to them. My thanks also go to the Publications Chair Sushil

Prasad for his outstanding efforts in putting the proceedings together. Finally, I thank all the authors for their contributions to a high-quality technical program. I wish all the attendees a very enjoyable and informative meeting. December 2008 P. Sadayappan Message from the General Co-chairs and the Vice General Co-chairs On behalf of the organizers of the 15th International Conference on High-Performance Computing (HiPC), it is our pleasure to present these proceedings and we hope you will find them exciting and rewarding. The HiPC call for papers, once again, received an overwhelming response, attracting 317 submissions from 27 countries. P. Sadayappan, the Program Chair, and the Program Committee worked with remarkable dedication to put together an outstanding technical program consisting of the 46 papers that appear in these proceedings.

In GM LS-Series Engines: The Complete Swap Manual, expert Joseph Potak walks you through all the steps involved in installing an LS engine into any vehicle, from concept to completion. Variants of GM's groundbreaking family of LS engines are installed in everything from the company's most mundane panel vans to its earth-shaking Corvette ZR1. First underhood in the 1997 Corvette, the LS1, and its successors have proven powerful, reliable, and amazingly fuel efficient. Since that time, more than a dozen variants have been produced, ranging from bulletproof, iron-block 4.8-liter workhorses to the supercharged 7.0-liter LS7. Performance enthusiasts have embraced this remarkable V-8, and it has quickly become a favorite for engine swaps. Why? Because the versatile engine offers fantastic power, a compact design, and light weight, and it responds very well to performance modifications. The key to this performance is a sophisticated electronics package that can intimidate even the most adventurous hot rodder. In GM LS-Series Engines: The Complete Swap Manual, professional LS-series engine specialist and technician Joseph Potak details all the considerations involved in performing this swap into any vehicle. With clear instructions, color photos, diagrams, and specification tables, Potak guides you through: Mounting your new engine Configuring the EFI system Designing fuel and exhaust systems Sourcing the correct accessories for your application Transmission, torque converters, and clutches Performance upgrades and power-adders Troubleshooting, should problems arise This is the ultimate guide to installing an LS in your project car.
