matter how

conscientious we are,
we carry implicit
bias... which quickly
turns into assumptions
and then labels.
Labels define our
interactions with and
expectations of
students. Labels
contribute to student
identity and agency.
And labels can have a
negative effect beyond
the classroom. It's

crucial, then, that teachers remove labels and focus on students' strengths—but this takes real work at an individual, classroom, and schoolwide scale. Removing Labels urges you to take an active approach toward disrupting the negative effects of labels and assumptions that interfere with student learning. This book offers: 40 practical, replicable teaching techniques—all based in research and best practice—that focus on building relationships, restructuring classroom engagement and management, and understanding the power of social and emotional learning. Suggestions for actions on an individual, classroom, and schoolwide level

Ready-to-go tools and student-facing printables to use in planning and instruction. This is the ninth in the 300 series of circuit design books, again contains a wide range of circuits, tips and design ideas. The book has been divided into sections, making it easy to find related subjects in a single category. The book not only details DIY electronic circuits for home construction but also inspiring ideas for projects you may want to design from the ground up. Because software in general and microcontroller

programming techniques in particular have become key aspects of modern electronics, a number of items in this book deal with these subjects only. Like its predecessors in the 300 series, "308 Circuits" covers the following disciplines and interest fields of modern electronics: test and measurement, radio and television, power supplies and battery chargers, general interest, computers and microprocessors, circuit ideas and audio and hi-fi.

First published in 1898, this is a very different astrology book from what we have now.

There are extensive delineations for the signs of the zodiac, especially when found on the ascendant.

There are delineations of planets in signs when they are in the first house or are the chart ruler, in both cases, describing the physical

appearance. There are delineations of planets in the various houses, which will also serve for the planetary rulerships of the houses. There are only sketchy notes on aspects. So far as the "pure astrology" of planets in signs, in houses, in aspect, there is almost nothing at all. The reason is found in the second part of the book. We are not reading the chart as a psychological abstraction. We are, instead, looking for specific traits, attempting to answer specific questions. Will we have a profession? What kind of marriage? What kind of children? Will we vanquish our enemies, or submit to them? What kind of illness? We then find the house(s) of the horoscope which rule the question, and then delineate the signs & planets we find there. These are, by the way, the sort of questions that clients would ask, if they only knew we could give answers! The sort of things that astrologers themselves want to know. In the process we

learn how to read a chart & get real meaning from it. We get ideas from one section and then apply them to other sections. There are hundreds and hundreds of useful aphorisms, except that Sepharial doesn't label them as such. Get this book, study it, underline key passages, scribble in the margins. You will learn more from this book than most all others put together.

This book, first published in 1987, is about the classic free will problem, construed in terms of the implications of moral responsibility. The principal thesis is that the core issue is metaphysical: can scientific laws postulate objectively necessary connections between an action and its causal antecedents? The author concludes they cannot, and that, therefore, free will and determinism can be reconciled.
