Over the past 100 years the European Automotive Industry has been repeatedly challenged by best practice. First by the United States, through the development of 'mass production' pioneered by Henry Ford and more recently by 'lean production techniques' as practised by the leading Japanese producers, particularly Toyota. It has consistently risen to these challenges and has shown it can compete and even outperform its competitors with world-class products. However, the European industry is now faced with growing competition and growth from new emerging low-cost countries and needs to re-define its competitive advantage to remain at the forefront of the sector. Automotive growth is driven by two factors, new markets and new technologies. Global competition is increasing, with technology and product differentiation becoming the most important sales factors, but with continued cost pressure. Within the market the winners will be more profitable and the losers will disappear. The Automotive Industry makes a significant contribution to the socio-economic fabric of the European Union. Manufacturing output represents €700 billion and research and development spending €24 billion. European automotive suppliers number 5000 member companies and represent 5 million employees and generate €500 billion in revenues. These are significant figures that generate wealth and high value employment within the EU. European firms must consistently improve their competitive position to ensure that the industry does not migrate to growing new markets.

The car world is full of fascinating characters, but few have a story to tell quite as remarkable and inspirational as Tom Hartley. Walking out of school at the age of 11, unable to read or write, Hartley set up his own business buying and selling cars. From that moment, he defied logic and ripped up the rule book on his way to the top. Today he runs one of the most successful independent family run performance and luxury car businesses in the world. He has built up an unrivalled reputation as "The Dealmaker." Tom has been at the top for over 40 years, survived and thrived through four recessions, and overcome three life threatening illnesses. In his own brutally honest words, Hartley tells his gripping story of a boy from a traditional Romany family who swapped the classroom for the cut-throat world of Glasgow's car auctions, buying and selling his first car at the age of 12. Having decided to drive himself around illegally, he was only 15 when he had his first car crash, and they don't come more spectacular than writing off a Ferrari Dino - nothing has ever been normal in the world of Tom Hartley! Hartley had made his first million by the age of 17, but soon suffered major setbacks as his business went bust, and he found himself at risk of losing his sight without major surgery. Hartley started all over again, living in a mobile home with his wife and working from the back of a car. He had gone from hero to zero, but his burning desire to be the best saw him climb his way back to the top. His ability to clinch deals in some of the most bizarre places has become legendary, like buying a car in a sauna, while stuck in a traffic jam on a motorway, and even in a swimming pool! Family has played a key part in the Tom Hartley story, his wife has been at his side all the way, and his two sons have followed closely in their father's footsteps. Indeed Tom's belief in family is one of the inspiring messages that comes through. Hartley's inspirational story is about the unshakeable belief in his own abilities, from a precocious schoolboy who had a dream, and then through sheer hard work and a burning desire to make the dream come true. This is not just a book for car enthusiasts but for anyone who has dared to dream. It's a story that will inspire and motivate, and proves you can make the wildest dream come true if you want it badly enough. Tom's remarkable story is written with the collaboration of journalist Ken Gibson, for 24 years, award-winning Motoring Editor of The Sun newspaper.

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies,

materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

There are many books on the market that discuss the Toyota Production System but few that insightfully analyze its marketing strategy. Authored by former Toyota marketing executives, this is the first book of its kind to detail how Toyota's thinking habits go beyond the shop floor and influence and guide Toyota's marketing function. Toyota has expanded from a venture enterprise to one of the biggest global enterprises because of its innovative mindset (Toyota thinking habits) using Breakthrough Thinking, which supports a new philosophical approach to problem solving, turning 180 degrees away from conventional thinking. Written by Toyota's former executive managing director and founder of Breakthrough Thinking, Toyota's Global Marketing Strategy: Innovation through Breakthrough Thinking and Kaizen: Explores Toyota's "Breakthrough Thinking" Examines how Toyota conducts information gathering. Illustrates how Toyota builds and maintains its unique business culture Shows how Toyota "goes to the customer" and comprehensively studies how customers use their products Reveals Toyota's cars have become some of the biggest selling models in the USA The authors of this book explore Toyota thinking habits as well as Toyota's global marketing strategy, which, since the 1980sa, has been expanding exponentially. The reader will understand the importance of thinking habits in the workplace and will know how to apply them using Toyota as the prime case study.

The Ford FE (Ford Edsel) engine is one of the most popular engines Ford ever produced, and it powered most Ford and Mercury cars and trucks from the late 1950s to the mid-1970s. For many of the later years, FE engines were used primarily in truck applications. However, the FE engine is experiencing a renaissance; it is now popular in high-performance street, strip, muscle cars, and even high-performance trucks. While high-performance build-up principles and techniques are discussed for all engines, author Barry Rabortnick focuses on the max-performance build-up for the most popular engines: the 390 and 428. With the high-performance revival for FE engines, a variety of builds are being performed from stock blocks with mild head and cam work to complete aftermarket engines with aluminum blocks, high-flow heads, and aggressive roller cams. How to Build Max-Performance Ford FE Engines shows you how to select the ideal pistons, connecting rods, and crankshafts to achieve horsepower requirements for all applications. The chapter on blocks discusses the strengths and weaknesses of each particular block considered. The book also examines head, valvetrain, and cam options that are best suited for individual performance goals. Also covered are the best-flowing heads, rocker-arm options, lifters, and pushrods. In addition, this volume covers port sizing, cam lift, and the best rocker-arm geometry. The FE engines are an excellent platform for stroking, and this book provides an insightful, easy-to-follow approach for selecting the right crank, connecting rods, pistons, and making the necessary block modifications. This is the book that Ford FE fans have been looking for.

Between 1997 and 2014, Tom Kristensen won the world's toughest motor race, the Le Mans 24 Hours, a record nine times and finished on the podium on five more occasions. Every time his car made it to the finish, in fact, he was in the top three. It is no wonder that this great sports car driver is known as 'Mr Le Mans' to motorsport fans around the world. Now retired from racing, Kristensen shares in this book his deepest personal reflections and insights from inside and outside the cockpit. He looks back on more than 30 years spent striving for perfection in racing and tells of the battles and setbacks that sometimes seemed impossible to overcome, including a terrible accident in 2007. Climbing the racing ladder, from karting into Formula 3 single-seaters, including championship titles in Germany (1991) and Japan (1993), then Formula 3000 and a Formula 1 testing role with Tyrrell. Winning as an underdog on his first visit to Le Mans, in 1997 driving an elderly Joest-run privateer Porsche in which he impressed all onlookers with a night-time charge to vanquish Porsche's factory-entered favourite. His second Le Mans victory came in 2000 on his maiden drive for Audi in the R8, a car that was to become all-conquering. Kristensen won the next five editions of Le Mans, four times with Audi and once with Bentley (in 2003), his last victory in this sequence taking him past Jacky Ickx's previous record at the Circuit de la Sarthe. His eighth win came in one of the all-time classic contests at Le Mans, in 2008, a rollercoaster of a race in which his ageing diesel-powered Audi was never expected to beat the fancied works Peugeots. One more victory with Audi in 2013 sealed his reputation as a true legend of Le Mans. His story includes exploits at other racetracks all over the world, none more prolific than Sebring, home of America's long-established classic endurance race that Kristensen won six times. Personal reflections together with contributions from notable observers -- including English journalists Gary Watkins and Charles Bradley -- complete a truly rounded portrait of the man and his achievements. Voted 'Sports Book of the Year' when originally published in Kristensen's native Denmark, this thoughtful memoir is now available in English.
