The industrial and medical applications of
radiation have been augmented and scientific
insight into mechanisms for radiation action
notably progressed. In addition, the public
concern about radiation risk has also grown
extensively. Today the importance of risk
communication among stakeholders involved in
radiation-related issues is emphasized much
more than any time in the past. Thus, the
circumstances of radiation research have
drastically changed, and the demand for a
novel approach to radiation-related issues is
increasing. It is thought that the publication of
the book Evolution of Ionizing Radiation
Research at this time would have enormous
impacts on the society. The editor believes that
technical experts would find a variety of new
ideas and hints in this book that would be
helpful to them to tackle ionizing radiation.

When the war ended on August 15, 1945, I was a
naval engineering cadet at the Kure Navy Yard
near Hiroshima, Japan. A week later, I was demobi-
lized and returned to my home in Tokyo, fortunate
not to find it ravaged by firebombing. At the
beginning of September, a large contingent of the
American occupation forces led by General
Douglas MacArthur moved its base from
Yokohama to Tokyo. Near my home I watched a
procession of American military motor vehicles
snaking along Highway 1. This truly awe-inspiring
cavalcade included jeeps, two-and-a-half-ton
trucks, and enormous trailers mounted with tanks
and artillery. At the time, I was a 21-year-old
student in the Machinery Section of Engineering at
the Tokyo Imperial University. Watching that mag-
nificent parade of military vehicles, I was more
than impressed by the gap in industrial strength
between Japan and the U. S. That realization led
me to devote my whole life to the development of
the Japanese auto industry. I wrote a small article
concerning this incident in Nikkei Sangyo Shimbun
(one of the leading business newspapers in Japan)
on May 2, 1983. The English translation of this
story was carried in the July 3, 1983 edition of the
Topeka Capital-Journal and the September 13,
1983 issue of the Asian Wall Street Journal. The
Topeka Capital-Journal headline read,
"MacArthur's Jeeps Were the Toyota Catalyst."

The powertrain is at the heart of vehicle design; the
engine – whether it is a conventional, hybrid or
electric design – provides the motive power, which
is then managed and controlled through the
transmission and final drive components. The
overall powertrain system therefore defines the
dynamic performance and character of the vehicle.

The design of the powertrain has conventionally been tackled by analyzing each of the subsystems individually and the individual components, for example, engine, transmission and driveline have received considerable attention in textbooks over the past decades. The key theme of this book is to take a systems approach – to look at the integration of the components so that the whole powertrain system meets the demands of overall energy efficiency and good drivability. Vehicle Powertrain Systems provides a thorough description and analysis of all the powertrain components and then treats them together so that the overall performance of the vehicle can be understood and calculated. The text is well supported by practical problems and worked examples. Extensive use is made of the MATLAB(R) software and many example programmes for vehicle calculations are provided in the text. Key features: Structured approach to explaining the fundamentals of powertrain engineering Integration of powertrain components into overall vehicle design Emphasis on practical vehicle design issues Extensive use of practical problems and worked examples Provision of MATLAB(R) programmes for the reader to use in vehicle performance calculations This comprehensive and integrated analysis of vehicle powertrain engineering provides an invaluable resource for undergraduate and postgraduate automotive engineering students and is a useful reference for practicing engineers in the vehicle industry
