Automotive Wiring and Electrical Systems Vol. 2 Dundurn This book addresses two of the most important trends in political economy during the

last two decades - globalization and decentralization - in the context of the world's most rapidly growing economic power, China. The intent is to provide a better understanding of how local political and economic institutions shape the ability of Chinese state-owned firms to utilize foreign direct investment (FDI) to remake themselves in the transition from inefficient and technologically backward firms into powerful national champions. In a global economy, the author argues, local governments are increasingly the agents of industrial transformation at the

level of the firm. Local institutions are durable over time, and they have important economic consequences. Through an analysis of five Chinese regions, the treatment seeks to specify the opportunities and constraints that alternative institutional structures create. how they change over time, and ultimately, how they prepare Chinese firms for the challenge of global competition.
