The field of industrial engineering (IE) has a very wide scope, from production processes and automation to supply chain management, but the scope of IE techniques has expanded beyond the traditional domains of application, and is now relevant to areas that matter most to society at large. This book presents the proceedings of ICIEA 2023, the 10th International Conference on Industrial Engineering and Applications, held in Phuket, Thailand, from 4 to 6 April 2023. The conference was conducted in hybrid mode, with close to 100 delegates attending in person and about 50 participants attending online. A total of 272 submissions were received for the conference, of which 120 were accepted for presentation with 83 of those published here as full papers. These papers cover a wide range of topics within the scope of industrial and systems engineering, including but not limited to: supply chain and logistics; quality and reliability; advanced manufacturing; and production scheduling to ergonomics and man-machine systems interfaces. In particular, a significant number of papers are devoted to machine learning techniques and applications beyond the traditional manufacturing sector, to include healthcare, sustainability assessment, and other social issues.

Offering an overview of recent research and novel applications, the book will be of interest to all those whose work involves the application of industrial engineering techniques.
