Drawing on a wealth of knowledge and

experience and a background of more than 1,000 magazine articles on the subject, engine control expert Jeff Hartman explains everything from the basics of engine management to the building of complicated project cars. Hartman has substantially updated the material from his 1993 MBI book *Fuel Injection* (0-879387-43-2) to address the incredible developments in automotive fuel injection technology from the past decade, including the multitude of import cars that are the subject of so much hot rodding today. Hartman's text is extremely detailed and logically arranged to help readers better understand this complex topic.

Efforts to use existing trade agreements to build a larger regional agreement face many challenges. This book considers this problem with reference to ASEAN 's

current agreements with key partners and the interest to build the Regional Comprehensive Economic Partnership (RCEP). The analysis of the options is framed by a focus on the use of supply chains in international business. Issues considered include those related to reductions in tariffs, trade facilitation, the treatment of investment and of services and the definition of rules of origin. The work is informed by case studies of supply chains in automobile and electronics, and in a professional service sector. The book provides a set of priority actions for better progress in taking a bottom-up approach to building RCEP.

Safety Related Recall Campaigns for Motor Vehicles and Motor Vehicle Equipment, Including Tires Dundurn What Makes this Book Unique? No crystal ball is required to safely predict, that in the future – even more than in the past – mastered innovativeness will be a primary criterion distinguishing s- cessful from unsuccessful companies. At the latest since Michael Porter ’ s study on the competitiveness of nations, the same criterion holds even for the evaluation of entire countries and national economies. Despite the innumerable number of p- lications and recommendations

on innovation, competitive innovativeness is still a rare competency. The latest publication of UNICE – the European Industry - ganization representing 20 million large, midsize and small companies – speaks a clear language: Europe qualifies to roughly 60% (70%) of the innovation strength of the US (Japan). The record unemployment in many EU countries does not c- tradict this message. A main reason may be given by the fact that becoming an innovative organi- tion means increased openness towards the new and more tolerance towards risks and failures, both challenging the inherently difficult management art of cultural change. Further, lacking innovativeness is often related to legal and fiscal barriers which rather hinder than foster innovative activities. Yet another reason to explain Europe ’ s notorious innovation gap refers to insufficient financial R&D resources on the company as well as on the national level. As a result, for example, hi- ranking decisions on the level of the European Commission are taken to increase R&D expenditures in the European Union from roughly 2% to 3% of GNP.
