Yes they are related, usually the VSC (vehicle skid control) warning light will turn on when the check engine light turns on, this is so because the VSC is disabled as soon as the check engine light turns on, the engine light should be diagnosed first and corrected, this can be done by connecting a diagnostic scan tool to get the trouble codes, I

recommend you see the Toyota dealer for this. Toyota highlander: s vsc light..check engine light..trac ...

The check engine and VSC (Vehicle Stability Control) lights came on in traffic and the computer set a P0442 code (small leak in EVAP system). Apparently this is very common code on older Toyota vehicles, and it seems to be the default code anytime there's vacuum or fuel vapor leak in the intake, fuel, and or EVAP system.

My Toyota

Highlander VSC and check engine lights are on.

I'm so glad to find out it's not just me. My 2003 Toyota Highlander AWD, has 68K, and my check engine light has been on for a year and I have been told there are two possible reasons, the O2 sensor or the fuel ratio sensor. Based on the posts that I have read, I am

leaning towards the O2 sensor as being the problem.

Toyota/Lexus "VSC Off" & "Check Engine" Lights On

Most Toyota owners will find that when the Check Engine and VSC lights are lit, there is a problem with an O2 Sensor or gas cap. Try tightening or replacing the gas cap for a hopefully cheap fix. To be sure of the problem you may want to take your vehicle to an Auto Zone or NAPA store to have them plug in a code reader to determine the problem.
