Through different applications, electricity provides the energy required for light, heat, comfort, and mechanical work. In order to sustain society's expectation for comfort, convenience and productivity, it will remain necessary to continue to seek and find reasonable quantities of energy in forms which are accessible, affordable and have modest or zero environmental impacts. This in turn will call for an international imperative to make existing uses of electricity both efficient and practical. This book will guide the reader toward a clearer vision of that goal, with explanations of the concept of electrification, along with

CO2 reductions through expanded end-use applications of electricity. Topics will include electric cars; airport, seaport, railroad and mining electrification; industrial uses of electricity in a variety of processes; residential building use of electricity; and enhancing energy efficiency and demand response.

Saving Energy and Reducing CO2 Emissions with Electricity Consumer Guide Books

As we continue in an era of simultaneous innovation and commoditization, enabled by digital technologies, managers around the world are asking themselves "how can we both adapt to rapid changes in technology and markets, and still make enough money to survive - and thrive?" To provide answers to these important and urgent questions, MIT Sloan School of Management Professor Michael Cusumano draws on nearly 30 years of research into the practices of global corporations that have been acknowledged leaders and benchmark setters - including Apple, Intel, Google, Microsoft, Toyota, Sony, Panasonic, and others in a range of high-technology, services, and manufacturing industries. These companies have also encountered major challenges in their businesses or disruptions to their core technologies. If we look deeply enough, he contends, we can see the ideas that underpin the management practices that make for great companies, and drive their strategic evolution and innovation capabilities. From his deep knowledge of these organizations, Cusumano distills six enduring principles that he believes have been - in various combinations - crucial to their strategy, innovation management practices, and ability to deal with change and uncertainty. The first two principles - platforms (not just products), and services (especially for product firms) - are relatively new and broader ways of thinking about strategy and business models, based on Cusumano's latest research. The other four - capabilities (not just strategy or positioning), the "pull" concept (not just push), economies of scope (not just scale), and flexibility (not just efficiency) - all contribute to agility, which is a mix of flexibility and speed. Many practices associated with these ideas, such as dynamic capabilities, just-in-time production, iterative or prototype-driven product development, flexible design and manufacturing, modular architectures, and component reuse, are now commonly regarded as standard best practices. These six enduring principles are essential in a new world dominated by platforms and technology-enabled services.

Phil Edmonston, Canada ' s automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler ' s days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz — rich cars, poor quality. There ' s only one Saturn you should buy. Toyota — enough apologies: "when you mess up, ' fess up."
