This open access book provides insight into the implementation of Life Cycle approaches along the entire business value chain, supporting environmental, social and economic sustainability related to the development of industrial

technologies, products, services and policies; and the development and management of smart agricultural systems, smart mobility systems, urban infrastructures and energy for the built environment.

The book is based on papers presented at the 8th International Life Cycle Management Conference that took place from

September 3-6, 2017 in Luxembourg, and which was organized by the Luxembourg Institute of Science and Technology (LIST) and the University of Luxembourg in the framework of the LCM Conference Series.

Figuring History  
McGraw Hill  
Professional  
In the 1950s – 80s, Brazil built one of the most advanced industrial networks among the "developing" countries, initially concentrated in the state of São Paulo. But from the 1980s, decentralization of industry spread to other states reducing São Paulo's relative importance in the country's industrial

product. This volume draws on social, economic, and demographic data to document the accelerated industrialization of the state and its subsequent shift to a service economy amidst worsening social and economic inequality. Through its cultural institutions, universities, banking, and corporate sectors, the municipality of São Paulo would become a world metropolis. At the same time, given its rapid growth from 2 million to 12 million residents in this period, São

Paulo dealt with problems of distribution, housing, and governance. This significant volume elucidates these and other trends during the late twentieth and early twenty-first centuries, and will be an invaluable reference for scholars of history, policy, and the economy in Latin America.

Extractive Metallurgy of Niobium Springer Science & Business Media  
Dynamic Asia has overtaken the European Union as Latin America and the Caribbean's second largest export market, after

---

the United States. However, the region's exports to Asia remain concentrated in few commodities involved a small number of large firms. This book explores the present and future scope for the participation of small and medium-sized enterprises (SMEs) in biregional trade and value chains and the measures that can be taken to make those chains more inclusive and sustainable. It encourages governments in Latin America to improve the business environment in order to encourage multinational firms to invest, upgrade and innovate in the

region. Enhancing Synergies in a Collaborative Environment Routledge The growth and development witnessed today in modern science, engineering, and technology owes a heavy debt to the rare, refractory, and reactive metals group, of which niobium is a member. Extractive Metallurgy of Niobium presents a vivid account of the metal through its comprehensive discussions of properties and applications, resources and

resource processing, chemical processing and compound preparation, metal extraction, and refining and consolidation. Typical flow sheets adopted in some leading niobium-producing countries for the beneficiation of various niobium sources are presented, and various chemical processes for producing pure forms of niobium intermediates such as chloride, fluoride, and oxide are discussed. The book also explains how to liberate the metal from its

---

intermediates and describes the physico-chemical principles involved. It is an excellent reference for chemical metallurgists, hydrometallurgists, extraction and process metallurgists, and minerals processors. It is also valuable to a wide variety of scientists, engineers, technologists, and students interested in the topic. Emergency General Surgery Springer This book describes how the creation of new digital services—through vertical and horizontal

integration of data coming from sensors on top of existing legacy systems—that has already had a major impact on industry is now extending to healthcare. The book describes the fourth industrial revolution (i.e. Health 4.0), which is based on virtualization and service aggregation. It shows how sensors, embedded systems, and cyber-physical systems are fundamentally changing the way industrial processes work, their business models, and how we consume, while also affecting the health and care domains. Chapters describe the technology behind the shift of point of

care to point of need and away from hospitals and institutions; how care will be delivered virtually outside hospitals; that services will be tailored to individuals rather than being designed as statistical averages; that data analytics will be used to help patients to manage their chronic conditions with help of smart devices; and that pharmaceuticals will be interactive to help prevent adverse reactions. The topics presented will have an impact on a variety of healthcare stakeholders in a continuously global and hyper-connected world. - Presents explanations

---

of emerging topics as they relate to e-health, such as Industry 4.0, Precision Medicine, Mobile Health, 5G, Big Data, and Cyber-physical systems; - Provides overviews of technologies in addition to possible application scenarios and market conditions; - Features comprehensive demographic and statistic coverage of Health 4.0 presented in a graphical manner.

Afghanistan. Today, multinationals and nations compete for the oil and gas reserves of the Caspian Sea and for control of the pipelines. Yet "Stanland" is still, to many, a terra incognita, a geographical blank. Beginning in the mid-1990s, academic and journalist David Mould's career took him to the region on Fulbright Fellowships and contracts as a media trainer and consultant for UNESCO and USAID, among others. In *Postcards from Stanland*, he takes readers along with him on his encounters with the people, landscapes, and customs of the

diverse countries--Kazakhstan, Kyrgyzstan, Tajikistan, and Uzbekistan--he came to love. He talks with teachers, students, politicians, environmental activists, bloggers, cab drivers, merchants, Peace Corps volunteers, and more. Until now, few books for a nonspecialist readership have been written on the region, and while Mould brings his own considerable expertise to bear on his account--for example, he is one of the few scholars to have conducted research on post-Soviet media in the region--the book is above all a tapestry of

place and a valuable contribution to our understanding of the post-Soviet world. *Perovskite Oxide for Solid Oxide Fuel Cells* Little, Brown Contemporary artists Robert Colescott (1925-2009), Kerry James Marshall (b. 1955), and Mickalene Thomas (b. 1971) are distinguished by their attention to a history of representation, which they re-visit and revise to reflect on individual and collective Black experience. Equally engaged with social and political histories, and the history of art, Colescott, Marshall, and Thomas have created works that at times poignantly and satirically critique dominant narratives and posit alternatives. By considering these

---

artists together, this thought-provoking book expands our understanding of contemporary history painting, a genre first defined during the 17th century and known for didactic paintings that often depicted Biblical or mythological subjects, and expressed the tastes and narratives of a ruling class. Colecott, Marshall, and Thomas marry appreciation of these traditional forms of representation to a deep understanding of contemporary American culture to create insightful works that disrupt historic narratives and read canonic art history against the grain. In their chapters the authors revisit their original works in the light of contemporary anthropology, focusing on different academic and personal aspects of their ethnographies. For example, they explain how they chose the communities they worked in; the personal relations they established there during fieldwork; the kind of links they have maintained; and how these communities have changed over time. They also review their original methodological and theoretical approaches and findings, reassessing their validity and explaining how their views have

evolved or changed since they originally conducted their fieldwork and published their studies. This book also offers a review of the evolution and role of community ethnographies in the context of Andean anthropology.

It is our wish that readers discover the importance of polymyxin structure in relation to the mechanisms of activity, resistance and toxicity. We emphasized that reliable analytic methods for polymyxins are critical when investigating their

---

pharmacokinetics (PK) and pharmacodynamics (PD). The complicated dose definitions and different pharmacopoeial standards have already compromised the safe use of polymyxins in patients. Therefore, informed by the latest pharmacological information, scientifically-based dosing recommendations have been proposed for intravenous polymyxins. Considering the PK/PD limitations and potential

development of resistance, polymyxin combinations are encouraged; however, the current literature has not shown definite microbiological benefits, possibly because most clinical studies to date overlooked key PK/PD principles. Nephrotoxicity is the major dose-limiting factor and it is imperative to elucidate the mechanisms and develop novel approaches to minimize polymyxin-associated toxicities. In addition, the anti-

endotoxin effect of polymyxins supports their clinical use to treat Gram-negative sepsis. Fortunately, the discovery of new-generation polymyxins with wider therapeutic windows has benefited from the latest achievements in polymyxin research. [Toyota Prado 1996-2008 Automobile Repair Manual](#) Yale University Press Current energy consumption mainly depends on fossil fuels that are limited and can cause environmental issues such as greenhouse gas emissions and global warming.

---

These factors have stimulated the search for alternate, clean, and renewable energy sources. Solar cells are some of the most promising clean and readily available energy sources. Plus, the successful utilization of solar energy can help reduce the dependence on fossil fuels. Recently, organic solar cells have gained extensive attention as a next-generation photovoltaic technology due to their light weight, mechanical flexibility, and solution-based cost-effective processing. Organic Solar Cells: Materials, Devices, Interfaces, and Modeling provides

an in-depth understanding of the current state of the art of organic solar cell technology. Encompassing the full spectrum of organic solar cell materials, modeling and simulation, and device physics and engineering, this comprehensive text: Discusses active layer, interfacial, and transparent electrode materials Explains how to relate synthesis parameters to morphology of the photoactive layer using molecular dynamics simulations Offers insight into coupling morphology and interfaces with charge transport in organic solar cells Explores photoexcited carrier

dynamics, defect states, interface engineering, and nanophase separation Covers inorganic – organic hybrids, tandem structure, and graphene-based polymer solar cells Organic Solar Cells: Materials, Devices, Interfaces, and Modeling makes an ideal reference for scientists and engineers as well as researchers and students entering the field from broad disciplines including chemistry, material science and engineering, physics, nanotechnology, nanoscience, and electrical engineering. We hold many  
assumptions about  
police work Ñ that it is  
the responsibility of  
the state, or that police  
officers are given the  
right to kill in the  
name of public safety  
or self-defense. But in  
The Killing  
Consensus, Graham  
Denyer Willis shows  
how in S ã o Paulo,  
Brazil, killing and the  
arbitration of  
Ònormal Ó killing in  
the name of social  
order are actually  
conducted by two  
groups Ñ the police  
and organized  
crime Ñ both  
operating according to  
parallel logics of  
murder. Based on  
three years of  
ethnographic  
fieldwork, Willis's  
book traces how  
homicide detectives

categorize two types of  
killing: the first  
resulting from  
Ò resistance Ó to  
police arrest (which is  
often broadly defined)  
and the second at the  
hands of a crime  
"family" known as the  
Primeiro Comando da  
Capital (PCC). Death  
at the hands of police  
happens regularly,  
while the PCC Ós  
centralized control and  
strict moral code  
among criminals has  
also routinized killing,  
ironically making the  
city feel safer for most  
residents. In a  
fractured urban  
security environment,  
where killing mirrors  
patterns of inequitable  
urbanization and  
historical exclusion  
along class, gender,  
and racial lines, Denyer  
Willis's research finds  
that the city Ós cyclical  
periods of peace and  
violence can best be

understood through an  
unspoken but mutually  
observed consensus on  
the right to kill. This  
consensus hinges on  
common notions and  
street-level practices of  
who can die, where,  
how, and by whom,  
revealing an  
empirically distinct  
configuration of  
authority that Denyer  
Willis calls sovereignty  
by consensus.
