Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.

Everything you want to know about the breakthroughs in AI technology, machine learning, and deep learning—as seen in self-driving cars, Netflix recommendations, and more. The future is here: Self-driving cars are on the streets, an algorithm gives you movie and TV recommendations, IBM’s Watson triumphed on Jeopardy over puny human brains, computer programs can be trained to play Atari games. But how do all these things work? In this book, Sean Gerrish offers an engaging and accessible overview of the breakthroughs in artificial intelligence and machine learning that have made today’s machines so smart. Gerrish outlines some of the key ideas that enable intelligent machines to perceive and interact with the world. He describes the software architecture that allows self-driving cars to stay on the road and to navigate crowded urban environments; the million-dollar Netflix competition for a better recommendation engine (which had an unexpected ending); and how programmers trained computers to perform certain behaviors by offering them treats, as if they were training a dog. He explains how artificial neural networks enable computers to perceive the world—and to play Atari video games better than humans. He explains Watson’s famous victory on Jeopardy, and he looks at how computers play games, describing AlphaGo and Deep Blue, which beat reigning world champions at the strategy games of Go and chess. Computers have not yet mastered everything, however; Gerrish outlines the difficulties in creating intelligent agents that can successfully play video games like StarCraft that have evaded solution—at least for now. Gerrish weaves the stories behind these breakthroughs into the narrative, introducing readers to many of the researchers involved, and keeping technical details to a minimum. Science and technology buffs will find this book an essential guide to a future in which machines can outsmart people.

The Race Glass by Remy Dean Paul, Mark and Nancy have finished school and are facing a British summer of uncertainty while they consider how to move on... three 'average' teenagers who learn the meaning of growing up and letting go. 'Snail Racing' tells the story of three friends attempting to take control of their futures, dealing with the subtle and complex issues of gender, belonging, connection, and alienation - a short story that is both poignant and told with an underlying wry wit... and, yes, they do race snails. College student Mac, lonely though surrounded by friends, is obsessed with his guitar - the only thing he can really relate to and express himself through. 'Guitar Hero' picks up on the themes of 'Snail Racing' and ups the ante in a world of free sex, cheap drink and expensive amplifiers - the second short story presented in this retrospective is delineated with a gentle humanity and reminds those who may have forgotten that the folly of youth is often a brave front. In a future world of virtual warfare, those with the fastest synaptic responses become heroes. In 'Homunculus', we meet Gurt, a 'Top Tester' for a bio-tech conglomerate that develops new kinds of weapons - but he is being changed by his experiences just as any real soldier is. Has he been contaminated? Is he losing part of himself or discovering himself anew? What secret is Gabby hinting at? Something strange is happening... and soldiers must have their orders. Mixing elements from SF, zombie horror and romance, the third short story in this collection remains highly relevant in a time when we are gradually losing-and-finding ourselves in the digital world... 'The Race Glass' is a retrospective, novelette-length, collection of short stories from the author of 'Scraps' and is presented here with an insightful introduction by Remy Dean.

A lot of books on driving are written by professional racers who assume you too want to be a professional racer. Not this book. It's written by a hobbyist who suggests you keep your day job. Besides, it's much more fun being an enthusiastic amateur than a jaded professional (just ask someone in the sex industry). This book is designed to help the average driver make the transition from commuter to safe road racer in as few pages as possible. I wrote this book because it's what I would have wanted to read when I first became interested in track driving: succinct, nerdy, practical, and occasionally diverting. It is not intended as a

definitive tome or a work of art. It's more like a sandwich: convenient and nourishing.
