Since 1958 the Maritime
Administration has

continuously conducted
instructions in use of
collision avoidance radar
for qualified U.S.
seafaring personnel and
representatives of
interested Federal and
State Agencies. Beginning
in 1963, to facilitate the
expansion of training
capabilities and at the
same time to provide the
most modern techniques
in training methods, radar

simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Nortup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York.

Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet

Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US, on

behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed. Tabloid Journalism in South Africa Lindhardt og Ringhof The fear of violent crime dominates Guatemala City. In the midst of unprecedented levels of postwar violence, Guatemalans struggle to fathom the myriad forces that have made life in this city so deeply insecure. Born out of

histories of state terror, migration, and US deportation, maras (transnational gangs) have become the face of this new era of violence. They are brutal organizations engaged in extortion, contract killings, and the drug trade, and yet they have also become essential to the emergence of a certain kind of social order. Drawing on years of fieldwork inside prisons, police precincts, and gang-dominated neighborhoods, Anthony W. Fontes demonstrates how gang violence has become indissoluble from contemporary social imaginaries and how these gangs provide cover for a host of other criminal actors. Ethnographically rich and unflinchingly critical, Mortal Doubt illuminates the maras' role in making and mooring collective terror in Guatemala City while tracing the ties that bind this violence to those

residing in far safer environs. Toyota Echo and Yaris "O'Reilly Media, Inc." Over the past 100 years the European Automotive Industry has been repeatedly challenged by best practice. First by the United States, through the development of ' mass production ' pioneered by Henry Ford and more recently by ' lean production techniques ' as practised by the leading Japanese producers, particularly Toyota. It has consistently risen to these challenges and has shown it can compete and even outperform its competitors with world-class products. However, the European - dustry is now faced with growing competition and growth from new emerging low-cost countries and needs to re-define its competitive advantage to remain at the

forefront of the sector.

Automotive growth is driven by two factors, new m- kets and new technologies. Global competition is increasing, with technology and product differentiation becoming the most important sales factors, but with c- tinued cost pressure. Within the market the winners will be more profitable and the losers will disappear. The Automotive Industry makes a significant contribution to the socio-economic fabric of the European Union. Manufacturing output represents € 700 billion and research and development spending € 24 billion. European automotive suppliers number 5000 member companies and represent 5 million employees and generate € 500 billion in revenues. These are significant figures that generate wealth

and high value employment within the EU. European firms must consistently improve their competitive position to ensure that the industry does not migrate to growing new markets.

Thoroughly rewritten for today's web environment, this bestselling book offers a fresh look at a fundamental topic of web site development: navigation design. Amid all the changes to the Web in the past decade, and all the hype about Web 2.0 and various "rich" interactive technologies, the basic problems of creating a good web navigation system remain. *Designing Web Navigation* demonstrates that good navigation is not about technology-it's about the ways people find information, and how you guide them. Ideal for beginning to intermediate web designers, managers, other non-designers, and web development pros looking for another perspective, *Designing Web Navigation* offers basic design principles, development techniques and practical advice, with real-world examples and essential concepts seamlessly folded in. How does your web

site serve your business objectives? How does it meet a user's needs? You'll learn that navigation design touches most other aspects of web site development. This book: Provides the foundations of web navigation and offers a framework for navigation design Paints a broad picture of web navigation and basic human information behavior Demonstrates how navigation reflects brand and affects site credibility Helps you understand the problem you're trying to solve before you set out to design Thoroughly reviews the mechanisms and different types of navigation Explores "information scent" and "information shape" Explains "persuasive" architecture and other design concepts Covers special contexts, such as navigation design for web applications Includes an entire chapter on tagging While Designing Web Navigation focuses on creating navigation

systems for large, information-rich sites serving a business purpose, the principles and techniques in the book also apply to small sites. Well researched and cited, this book serves as an excellent reference on the topic, as well as a superb teaching guide. Each chapter ends with suggested reading and a set of questions that offer exercises for experiencing the concepts in action.

The current fossil fuel-based system of mobility is associated with a wide range of environmental and social problems. There is a growing body of literature on system innovations and transitions which has as a common understanding that long-term transformative change is necessary to deal with these complex problems. However, knowledge on the crucial role of citizen-consumers in sustainable mobility transitions is still underdeveloped. By incorporating the viewpoint of consumption patterns and everyday life routines, this book provides (new) knowledge on the role of citizen-consumers in sustainable mobility

transitions. Theoretically, a practice based approach is developed as a novel framework to analyse, understand and influence transition processes to sustainable mobility at the level of everyday life. The focus in each of the three cases studies is on situated interactions between consumers and producers. Amongst these is an analysis of the role environmental information and subsidies in new car purchasing. Also, various examples in which an attempt was made to orchestrate a (modal) shift in commuting practices are examined. Each of the empirical case studies shows the important role of contextual factors in understanding and influencing mobility behaviour of citizen-consumers. In addition, this book helps to understand how and why innovation in mobility practices takes place or not.

There is an unprecedented surge of interest in and the desire of producing gaselectric hybrid (HEVs) and all-electric vehicles (EVs) by the governments and public in the industrialized countries. This surge of interest and desire is attributed to several factors relating to the life-threatening air pollution in many parts of the world, the high petroleum price, conflicts in oil producing Middle East regions and the alarming trend of global warming due to rapid increase of greenhouse gas emissions by all sources, including those from transportation. Full electric vehicles use no gasoline; they are powered by a high-voltage electric motor and battery pack. All the elements are now in place to tackle fairly complex static rigid body

problems. Battery electric vehicles do not have an internal combustion engine and use no on-board gasoline. Instead, they use a high-voltage electric motor, which gets its power from a high-voltage battery pack. The primary benefit of BEVs is that they completely eliminate carbon dioxide (CO₂) and other emissions directly from the vehicle. Therefore, it is vital to raise global ecological awareness and wider public education regarding ecology. Goal of this book is to bring closer to the readers new drive technologies that are intended to environment and nature protection. New Generation of Electric Vehicles presents modern technique achievements and technologies applied in the implementation of electric vehicles. Special attention was paid to energy efficiency of electrical vehicles. Also today's trends, mathematical models and computer design elements of future cars are presented.

Less than a decade after the advent of democracy in South Africa, tabloid newspapers have taken the country by storm.

One of these papers -- the Daily Sun -- is now the largest in the country, but it has generated controversy for its perceived lack of respect for privacy, brazen sexual content, and

unrestrained truth-stretching.

Herman Wasserman examines the success of tabloid journalism in South Africa at a time when global print media are in decline. He considers the social significance of the tabloids and how they play a role in integrating readers and their daily struggles with the political and social sphere of the new democracy. Wasserman shows how these papers have found an important niche in popular and civic culture largely ignored by the mainstream media and formal political channels.

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast.

This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.
