ITI Engineering Course Lift and Escalator

Mechanic, First Year, Sem- 1 & 2, Revised

Syllabus in 2018, It contains objective

questions with underlined & bold correct

answers MCQ covering all topics including all

about the latest & Important about basic

fitting covering components like filing,

sawing, drilling, tapping, chipping, grinding

and different fits,turning operations on lathe

viz., plain, facing, boring, grooving, step

turning, parting, chamfering, knurling and

different thread cutting by setting the different

parameter, mounting, balancing, dressing and truing of grinding wheel, plain and cylindrical surfaces, viz. parallel block, plain mandrel, socket, Morse taper, sleeve, Different milling operations (plain, stepped, angular, dovetail, T slot, contour, gear) along with surface & cylindrical grinding, taper grinding, eccentric grinding, bush, square block, V-block, angle plate, re-sharpening of side & face milling cutter and lots more.

Mechanical Handling of Materials Quickstudy
The field of artificial intelligence (AI) and the law is on the cusp of a revolution that began with text analytic programs like IBM's Watson and Debater and the open-source information management architectures on which they are based. Today, new legal applications are beginning to appear and this book - designed to explain computational processes to non-programmers - describes how they will

change the practice of law, specifically by connecting computational models of legal reasoning directly with legal text, generating arguments for and against particular outcomes, predicting outcomes and explaining these predictions with reasons that legal professionals will be able to evaluate for themselves. These legal applications will support conceptual legal information retrieval and allow cognitive computing, enabling a collaboration between humans and computers in which each does what it can do best. Anyone interested in how AI is changing the practice of law should read this illuminating work.

Refrigeration and Air Conditioning

Arihant Publications India limited

The text begins by reviewing, in a simple and precise manner, the physical principles of three pillars of Refrigeration

and Air Conditioning, namely thermodynamics, heat transfer, and fluid mechanics. Following an overview of the history of refrigeration, subsequent chapters provide exhaustive coverage of the principles, applications and design of several types of refrigeration systems and their associated components such as compressors, condensers, evaporators, and expansion devices. Refrigerants too, are studied elaboratively in an exclusive chapter. The second part of the book, beginning with the historical background of air conditioning in Chapter 15, discusses the

subject of psychrometrics being at the heart of understanding the design and implementation of air conditioning processes and systems, which are subsequently dealt with in Chapters 16 to 23. It also explains the design practices followed for cooling and heating load calculations. Each chapter contains several worked-out examples that clarify the material discussed and illustrate the use of basic principles in engineering applications. Each chapter also ends with a set of few review questions to serve as revision of the material learned.

Know Your State West Bengal PHI
Learning Pvt. Ltd.

This book explores how the Indian
education and training system
prepares young people for the
world of work and for the
requirements of the employment

market - because India is a leading
industrialised nation with a very
young population and a high demand
for a skilled workforce. Indian
experts write from a course-
specific perspective, offering a
comprehensive picture of
educational policy, curriculum
design and cultural
characteristics. The virtual
absence of a formalised system of
vocational training in India
underlines the importance of this
research.

India: Preparation for the
World of Work Upkar Prakash

This book is the revised 1941 mid-century guide on the basic principles of Shop from the prestigious Henry Ford Trade School, first published in

1934. The book was used by students attending Shop Theory classes and focusses on the historical development, principles of construction, and use, care, and operation of hand tools, precision tools, and the usual toolroom machines and equipment. The lesson sheet method of instruction, supplemented by lecture and discussion, is used. This compilation of the sheets, which was revised and brought up to date, should prove valuable as a reference for students and shop instructors.

Internal Labor Markets and Manpower Analysis Manoj Dole

"This new curriculum standard for the Level 2 - General Machinist for the Machining and Tooling trades is based upon the on-the-job performance objectives, located in the industry approved training standard. The curriculum is organized into 8 reportable subjects. The Program Summary of Reportable Subjects chart summarizes the training hours for each reportable subject. The curriculum identifies only the learning that takes place off-the-job. The in-school program focuses primarily on

the theoretical knowledge and the essential skills required to support the performance objectives of the Apprenticeship Training Standards. Employers/Sponsors are expected to extend the apprentice's knowledge and skills through practical training on the work site."--Document.
