Sleek and shiny, Airstream trailers have been turning heads on the highways since they first started caravanning across America in the 1930s. These "aluminum skinned, gleaming silver bullets" are currently enjoying a revival in popularity. Praised for their clean lines and timeless aesthetic, movie stars and design buffs are snapping up these vintage beauties. Airstream equal parts travelogue, cultural history, and biography of Wally Byam, Airstream's charismatic inventor celebrates the trailer's enduring appeal as an icon of simple, aerodynamic living. A dazzling array of images tell the story of how Byam, the father of modern trailer travel, created less a product than an entire culture. From the Eiffel Tower to the pyramids of Giza, from the Acropolis to the Golden Gate Bridge, Airstream caravans continue to travel to the far reaches of the earth. Amazing photographs from the Airstream archives document this metallic nomad's significant place in the history of design, from its streamlined origins to its current vogue.

Airstream has always been synonymous with the freedom of the open road. Today the dream lives on.

Feedback Systems Simon and Schuster The essential introduction to the principles and applications of feedback systems--now fully revised and expanded This textbook

covers the mathematics needed to model, analyze, and design feedback systems. Now more user-friendly than ever, this revised and expanded edition of *Feedback Systems* is a one-volume resource for students and researchers in mathematics and engineering. It has applications across a range of disciplines that utilize feedback in physical, biological, information, and economic systems. Karl Åström and Richard Murray use techniques from physics, computer science, and operations research to introduce control-oriented modeling. They begin with state space tools for analysis and design, including stability of solutions, Lyapunov functions, reachability, state feedback observability, and estimators. The matrix exponential plays a central role in the analysis of linear control systems, allowing a concise development of many of the key concepts for this class of models. Åström and Murray then develop and explain tools in the frequency domain, including transfer functions, Nyquist analysis, PID

control, frequency domain design, and robustness. Features a new chapter on design principles and tools, illustrating the types of problems that can be solved using feedback. Includes a new chapter on fundamental limits and new material on the Routh-Hurwitz criterion and root locus plots. Provides exercises at the end of every chapter. Comes with an electronic solutions manual. An ideal textbook for undergraduate and graduate students. Indispensable for researchers seeking a self-contained resource on control theory.
