Applying Digital Technologies to Evaluation John Wiley & Sons

In an environment where many organizations think of human capital assets as little more than expense items that impact the bottom line, this book will help human resource (HR) professionals initiate a shift toward a new culture in which management views employees as true partners in achieving organizational success. The Field Guide to Achieving HR Excellence through Six Sigma provides detailed guidance on how to utilize the Six Sigma methodology and the TLS Continuum to achieve the business model that is required to thrive in today’s business environment. The book demonstrates a clear path to continuous improvement that is based on the practice of spreading quality throughout the organization so that it becomes everyone’s responsibility. This book is the sequel to Achieving HR Excellence through Six Sigma. In this book, Daniel Bloom provides a road map on how to implement the concepts found in the first book. The book begins by explaining how to create an HR Center of Excellence and then provides an understanding of the define-measure-analyze-improve-control (DMAIC) process and its implementation for HR. This road map will help you determine where your organization is failing to meet the voice of the customer. The book presents proven Six Sigma solutions for initiating and sustaining organizational change as well as strategies that allow leadership to make adjustments to processes if your organization falls short of meeting the need of the customer. It includes case studies of organizations that have successfully utilized the Six Sigma methodology to improve workflow and correct HR issues including the actual project documents used to implement the methodology. A word of caution: If the reason you are looking to improve work flow is to find ways to reduce headcount, then this is not the book for you. Instead, if you are looking for a guide that can help you become a strategic partner, administrative expert, employee champion, and change agent, then fasten your seat belts and begin this worthwhile journey.

Organisation Development, as a field, is messy, imperfect and hard to get hold of - it is like nailing jelly to the wall. A Field Guide for Organisation Development offers a variety of perspectives and unparalleled experiences from practitioners and researchers who all share an interest and involvement in Organisation Development (OD). In it are multiple voices, mindsets and practices - not all of which necessarily agree with each other. Leading OD practitioners present a contemporary, practical guide that tackles the dilemmas and polarities that face anyone studying or practising within the OD arena, and encourages them to develop their own particular practice of OD in a way that is appropriate for their context, skills and preferences, while challenging them to look beyond what comes naturally. Here are new ways to support the growth and development of an organisation from modest endeavours that are small in scale to organisation-wide change programmes. A Field Guide for Organisation Development is as comprehensive a resource to support the practice of OD as can be found anywhere. It covers issues of organisational health as well as offering tools aimed at supporting practitioners to survive in the harsh realities of organisational life. It contains chapters on the OD practitioner, on groups, on culture, on data and evaluation. It offers perspectives on change, on the relationship between OD and HR, and on the use of external consultants.

While substantial advances have been made in the L&D profession over the last decade, evaluation remains by far the weakest part of the L&D cycle. Most organisations wish to evaluate the impact of their investment in training but few do it well, and the lack of effective methods is one of the key barriers. Complete Training Evaluation addresses these issues by providing practitioner friendly but academically robust information and guidance on how to evaluate all forms of learning and development. It draws on the author's own multidisciplinary research along with his practical experience of working with private and public sector organisations carrying out evaluation. The book provides practitioners with accessible 'how-to' knowledge and tools to undertake evaluations of both formal and informal learning. Full of case studies and practical examples of application of methods and insights, Complete Training Evaluation equips practitioners with a range of approaches that can be used depending on the training programme, capacity and capability.

"The Army's growing reliance on digital technologies reinforces and extends concerns about training and evaluation, particularly in the area of command and control. Digital technology represents a new and powerful weapon for attacking evaluation requirements, but is a double-edged sword that poses challenge and opportunity. This report examines bow digital technologies can help solve many evaluation challenges, including the ones they create. The Background chapter reviews basic issues confronting conventional command and control performance and evaluation. Two key issues considered are manually burdened methods and measures, and the limitations imposed by analog media. The Findings chapter examines bow digital technologies might improve evaluations of command and control performance. This examination begins by identifying many of the new challenges introduced by digital command and control systems. Next, opportunities for overcoming evaluation challenges through the application of digital technologies are considered, including automated measures of versus about performance, more precise and comprehensive measures, and less burdened measurement methods. Finally, examples of digital measurement methods illustrate the potential for improving command and control evaluation through digital data integration, data mining, and data visualization. The report's conclusions identify some key research and development efforts required for applying digital technology to improve command and control performance and evaluation."--DTIC.
