"Malathion is a registered insecticide and acaricide used on a wide variety of sites including agricultural and non-agricultural sites. In 2018 (the most recent year for which data are available), over 25 000 kg of malathion was sold in Canada. Malathion may be released into surface water or soil as runoff from the application site. Malathion is not usually found in drinking water sources in Canada. Low levels of malathion have been found in several Canadian provinces. The maximum reported concentrations are well below the MAC. Malathion is rarely detected in foods"--Executive summary.

Drama Steve Gooch. Charcters: 4 male, 6 female Interior Set This stark, hard hitting drama is an account of the political education of six women convicted of petty crimes in 19th century London and sentence to be transported to a life of hard labor in Britain's overseas penal colony (present day Australia). During the 6 month voyage they are kept in a cramped cell below deck where they learn certain truths about society. Foremost among these is they have been condemned due to the bias of a male dominated class system, represented in the play by the crew of the prison ship. Their consciousness raising is powerfully and sympathetically portrayed; at the end of their journey they have grown into a unified bunch of hardened fighters. Compelling. London Financial Times. A funny play, carried by racy vigor. Evening Standard.

This book, written by experts on gastroenterology and digestive surgery, provides comprehensive and detailed descriptions of all established and newly developed interventional endoscopic procedures. For each procedure, it addresses: indications; staff, instrumental and technical requirements; and results, potential complications and their management. Also featuring a wealth of images and drawings of the procedures, as well as helpful hints and tips, the book offers a valuable resource for young and seasoned internists and surgeons alike, as well as endoscopy specialists in other fields.

This document presents a synthesis of current information and operating practices related to roadside safety and is developed in metric units. The roadside is defined as that area beyond the traveled way (driving lanes) and the shoulder (if any) of the roadway itself. The focus of this guide is on safety treatments that minimize the likelihood of serious injuries when a driver runs off the road. This guide replaces the 1989 AASHTO "Roadside Design Guide."

The fact that Agnes Jacobs, a half-breed North American Mohawk Indian, aspired to greatness and succeeded, for a time, is a story worth telling. A liberated woman way before the term became fashionable, at seventeen, she cohabited with a young, full-blooded Mohawk, who in her opinion showed no gumption. She took off to make her fortune at the St. George Hotel in Ottawa, Ontario. She returned to her village and opened up the busiest, little speakeasy on the New York State and Canada border...at the height of the Prohibition Era. There she met a man worthy of her admiration-a state trooper who came to raid her speakeasy. She dared to show her feminine side, only to lose him to her youngest daughter Mary. Mary, needy for her mother's affections, endured her mother's wrath. Despondent over losing her two little girls to scarlet fever and pneumonia, she gave up and joined her two precious angels. She left her youngest, Eostenuni, age three, for her mother, Agnes, to bring up.

Gibbons are anthropoidal primates. Monogamous, they fiercely defend the territory they need, and perhaps this is the only thing which is truly necessary for them to live freely. Hunted by poachers to be resold as pets, driven out by deforestation in order to develop industrial crops, their extinction is drawing near.Yet, gibbons are beings apart which generate our curiosity, together with the desire to know and understand them. These outstanding acrobats do not try to seduce, yet they seduce thanks to their graceful movements, the depth of their singing, as well as their natural discretion. They are great apes in all their splendour...This book describes these great apes and reviews our ethnocentrism. Animals are sentient beings just like humans...

Industrial and academic scientists face increasing challenges to find cost-effective and environmentally sound methods for converting natural resources into fuels, chemicals and energy. With over 7000 papers published in this field of catalysis each year, keeping up with the literature can be difficult. Catalysis Volume 27 presents critical and comprehensive reviews of the hottest literature published over the last twelve months. Covering major areas such as chemical transformations using two-dimensional hybrid nanocatalysts, conversion of biomass-derived syngas to fuels and catalytic oxidation of organic pollutants in aqueous solution using sulfate radicals, this book is a useful reference for anyone working in catalysis and an essential resource for any library.

Much of our behavior is guided by our understanding of events. We perceive events when we observe the world unfolding around us, participate in events when we act on the world, simulate events that we hear or read about, and use our knowledge of events to solve problems. In this book, Gabriel A. Radvansky and Jeffrey M. Zacks provide the first integrated framework for event cognition and attempt to synthesize the available psychological and neuroscience data surrounding it. This synthesis leads to new proposals about several traditional areas in psychology and neuroscience including perception, attention, language understanding, memory, and problem solving. Radvansky and Zacks have written this book with a diverse readership in mind. It is intended for a range of researchers working within cognitive science including psychology, neuroscience, computer science, philosophy, anthropology, and education. Readers curious about events more generally such as those working in literature, film theory, and history will also find it of interest.

This open access book is part of the LAMBDA Project (Learning, Applying, Multiplying Big Data Analytics), funded by the European Union, GA No. 809965. Data Analytics involves applying algorithmic processes to derive insights. Nowadays it is used in many industries to allow organizations and companies to make better decisions as well as to verify or disprove existing theories or models. The term data analytics is often used interchangeably with intelligence, statistics, reasoning, data mining, knowledge discovery, and others. The goal of this book is to introduce some of the definitions, methods, tools, frameworks, and solutions for big data processing, starting from the process of information extraction and knowledge representation, via knowledge processing and analytics to visualization, sense-making, and practical applications. Each chapter in this book addresses some pertinent aspect of the data processing chain, with a specific focus on understanding Enterprise Knowledge Graphs, Semantic Big Data Architectures, and Smart Data Analytics solutions. This book is addressed to graduate students from technical disciplines, to professional audiences following continuous education short courses, and to researchers from diverse areas following self-study courses. Basic skills in computer science, mathematics, and statistics are required.

Therapeutic Endoscopy in the Gastrointestinal Tract

Not everyone is a friend of the manifold abbreviations that have by now become a part of the scientific language of medicine. In order to avoid misunderstanding these abbreviations, it is wise to refer to a reliable dictionary, such as this one prepared by Heister. The abbreviation ED means, for instance, effective dose to the pharmacologist. However, it might also stand for emetic dose. Radiologists use the same abbreviation for erythema dose, and ED could also mean ethyl dichlorarsine. A common meaning of ECU is European currency unit, a meaning that might not be very often in scientific medical publications. ECU, however, also means environmental control unit or European Chiropractic Union. Hopefully, those making inventions and discoveries will make use of Heister's dictionary before creating new abbreviations when preparing manuscripts for scientific publications. It is a very worthwhile goal not to use the same abbreviation for several different terms, especially if it is already widely accepted to mean only one of them. It may be impossible, however, to achieve this goal in different scientific disciplines. Therefore, although it is wise for the abbreviations used in a publication to be defined, it is also very helpful for readers and writers to use a dictionary such as this one. The author deserves our warmest thanks since we know that compiling such a comprehensive dictionary is based upon incredibly hard effort.
