What is transverse myelitis?
Transverse myelitis is an inflammation of the spinal cord, a major part of the central nervous system.
The spinal cord carries nerve signals to and from the brain through nerves that extend from each side of the spinal cord and connect to

nerves elsewhere in the body.

Transverse myelitis - Wikipedia

This neurological disorder often damages the insulating material covering nerve cell fibers (myelin). Transverse myelitis interrupts the messages that the spinal cord nerves send throughout the body. This can

cause pain, muscle weakness, paralysis, sensory problems, or bladder and bowel dysfunction. There are many different causes of transverse myelitis, including infections and immune system disorders that attack the body's tissues.
