This manual is intended as a comprehensive guide to the diagnosis and management of the burn patient. The authors feel that this volume can serve as a practical reference for the wide range of physician and allied health personnel involved in the care of these critically ill patients. The Manual of Burns was planned and written by the authors when they were on staff together

at the United States Army Institute of Surgical Research, Brooke Army Medical Center, Fort Sam Houston, Texas. The authors support the concept that appropriate therapy of the burn patient requires a multidisciplinary approach. The talents of physicians from many medical specialties, supported by nurses, therapists, and other allied health science personnel, must be coordinated if such a patient is to receive optimum care. Although the main thrust of this manual is directed at current techniques of diagnosis and treatment and therefore of primary interest to the physician, the authors also hope that the photographic and illustrative material will make this book useful to any member performing service in a burn treatment unit.

Affecting an estimated 2.5 million people worldwide, multiple sclerosis (MS) is the most common neurological cause of debilitation in young adults. Incurable, and with the precise causes still unknown, both diagnosis and management of the condition is complicated. This book summarizes the latest understanding of the causes of the disease, using accessible, bullet-point text to describe key clinical features and diagnostic criteria. Disease-modifying therapies and management of symptoms, including fatigue, tremor and cognitive changes, are covered in detail. With a chapter focusing solely on presentations in the emergency room, the importance of recognizing these neurological emergencies is emphasised, along with indications for admission in MS patients. The impact of MS on women's reproductive health and the increasing recognition of MS in pediatric patients is also explored. An up-to-date and practical approach to the accurate diagnosis and management of MS, this is an invaluable resource for both hospital and outpatient settings.
