This book combines an exceptional wealth of precise, exquisite schematic drawings and high-quality images with clear explanatory text in order to provide readers with a crisp and clear understanding of all aspects of congenital heart disease, from diagnosis to treatment and from the

fetus to the adult. In format the book appears similar to a large collection of case reports covering all types of congenital heart disease, including complex lesions such as single ventricle and atrial isomerism. For each lesion, the illustrations are placed before the text so that the reader can gain a quick and general overview before going into more detail. The contents are as practical and concise as possible. The intention is that, despite its size, the book will serve as a handy reference for cardiologists, surgeons, intensivists, obstetricians specializing in fetal sonography, nurses, trainees, students, researchers, and even patients and their families. This is a “must-have” bedside reference in the cardiac ward, the ICU, and the fetal sonography room and will even be valuable in outpatient clinics.

What Will Be Already Exists Cornell University Press

"The United States today faces a number of actors who employ a wide range of political, informational, military, and economic measures to influence, coerce, intimidate, or undermine U.S. interests or those of friends and allies; many of these measures are often collectively referred to as "political warfare." This report analyzes political warfare as it is practiced today by both state and nonstate actors, and provides detailed recommendations regarding the most effective ways that the U.S. government, along with its allies and partners, can respond to or engage in this type of conflict to achieve U.S. ends and protect U.S. interests. The authors examine historical antecedents of political warfare and current-day practices through in-depth case studies of Russia, Iran, and the Islamic State. They use these cases to derive common attributes of modern political warfare. The authors then identify effective means for responding to these challenges. Drawing on documentary and field research as well as extensive semistructured interviews with practitioners in the U.S. government and elsewhere, they determine gaps in practices and capabilities for addressing political warfare threats. The report concludes with recommendations for countering political warfare by creating a more effective, coordinated, and cost-sensitive approach to effective statecraft, including specific measures for the U.S. State Department and the U.S. military, particularly the special operations community. The Electrification of Russia, 1880 – 1926 is the first full account of the widespread adoption of electricity in Russia, from the beginning in the 1880s to its early years as a state technology under Soviet rule. Jonathan Coopersmith has mined the archives for both the tsarist and the Soviet periods to examine a crucial element in the modernization of Russia. Coopersmith shows how the Communist Party forged an alliance with engineers to harness the socially transformative power of this science-based enterprise. A centralized plan of electrification triumphed, to the benefit of the Communist Party and the detriment of local governments and the electrical engineers. Coopersmith's narrative of how this came to be elucidates the deep-seated and chronic conflict between the utopianism of Soviet ideology and the reality of Soviet politics and economics.

How do artist archives survive and stay authentic in radically changed contexts? The volume addresses the challenge of continuity, sustainability, and institutionalization of archives established by Eastern European artists. At its center stands the 40th anniversary of the Artpool Art Research Center founded in 1979 in Budapest as an underground institution based on György Galántai's » Active Archive « concept. Ten internationally renowned scholars propose contemporary interpretations of this

concept and frame artist archives not as mere sources of art history but as models of self-historicization. The contributions give knowledgeable insights into the transition of Cold War art networks and institutional landscapes.

Natural pine forests characterize many landscapes preserved over time, either as a result of a specific forest management practice or a disturbance. In the event of a lack of management over a long period of time, these formations could evolve with increasingly chaotic structures towards other formations. This process can lead to landscape change, the spread of insects and pathogens, and the risk of fires and watercourse obstruction. Pine forest plantations should be considered as transient tree populations, destined to evolve into more complex and stable formations. However, sometimes they should be preserved for their cultural value. Careful management of these forests also takes into account the close relationship between forest and human settlements. As a first step, ecological management assumes the definition of these two macro types. These approaches include the application of integrated methods for determining the reference conditions of the main functional and structural ecosystem components of forests. The reference

conditions are the historical (or natural) variability range of ecological structures and processes, reflecting the recent evolution and dynamic interaction of biotic and abiotic conditions and patterns of disturbance. These conditions form the basis for comparison with contemporary ecosystem processes and structures and are a frame of reference for designing ecological restoration treatments and conservation plans. The productive aspects must not be overlooked; rather, they have to be considered, planned, and managed with a perspective of sustainability and ecosystem functionality. This should be considered for a common approach to forest management, for a forest rehabilitation, and for forest restoration activities.

A prequel introducing the cast of characters from this year's Call of Duty®: Zombies game mode in 2018's Call of Duty®: Black Ops IV. Collects Issues 1-4. First, the year is 1910, the place is Morocco, and there is a job that needs doing. The man to do it? A commanding officer in the French Foreign Legion. The prize? An artifact of unspeakable power. The price? More than he bargained for. Second, tempted by the possibility of discovering an ancient depository of humanity's greatest secrets, a brilliant chemist with a troubled past travels across the globe in search of forbidden knowledge. Unfortunately, his past is coming too. Third, amidst the throes of the Mexican Revolution, an international spy and legendary lover finds himself drawn into another conflict--one that may decide the

fate of humanity itself. Finally, pieces are set in motion that shadowy forces have long been putting into place. They believe what comes next cannot be stopped. Little do they know an unlikely group is about to be assembled, by a woman they should not have crossed.

The English of Tourism is a collection of essays on the English specific to the Tourism Industry. The approach is a linguistic one: the different aspects of the English used in the field of tourism (tourism industry, types of tourism, travel agencies, Internet sites of travel agencies, eco-tourism, travel) and in tourism-related fields (accommodation, advertising, entertainment, food services, hospitality, transportation) are analysed from a morphological (combination, derivation), syntactical (nominal phrases, verbal phrases), lexical and lexicographical, semantic (homonymy, semantic fields, synonymy, terminology), pragmatic (academic discourse, idiom, metaphor), etymological (etymon, Latin heritage), and contrastive (Croatian – Romanian, English – Croatian, English – Romanian, French – English, Romanian – English) points of view. This book will appeal to people employed in industries including hotels, transportation, events, food and beverage, parks and recreation, as well as to

professors, researchers, students, and translators from Croatian-, English-, French-, and Romanian-speaking countries, active in their own countries or abroad. The types of academic readership it will appeal to include: academic teaching staff, researchers and students in the field of tourism, of tourism-related fields – accommodation, advertising, entertainment, food services, hospitality, and transportation – and of languages.

This book examines the evolution of the phenomenon and explores the genesis of overtourism and the system dynamics underlining it. The 'overtourism' phenomenon is defined as the excessive growth of visitors leading to overcrowding and the consequential suffering of residents, due to temporary and often seasonal tourism peaks, that lead to permanent changes in lifestyles, amenities and well-being. Enormous tensions in overtourism affected destinations have driven the intensification of policy making and scholarly attention toward seeking antidotes to an issue that is considered paradoxical and problematic. Moving beyond the 'top 10 things you can do about overtourism', this book examines the evolution of the phenomenon and explores the genesis of overtourism as well as the system dynamics underpinning it. With a rigorous scientific approach, the book uses systems-thinking and contemporary paradigms around sustainable

development, resilience planning and degrowth; while considering global economic, socio-political, environmental discourses. Researchers, analysts, policy makers and industry stakeholders working within tourism as well as those within the private sector, community groups, civil society groups and NGOs will find this book an essential source of information.

Since the 1990s, critics and curators have broadly accepted the notion that participatory art is the ultimate political art: that by encouraging an audience to take part an artist can promote new emancipatory social relations. Around the world, the champions of this form of expression are numerous, ranging from art historians such as Grant Kester, curators such as Nicolas Bourriaud and Nato Thompson, to performance theorists such as Shannon Jackson. *Artificial Hells* is the first historical and theoretical overview of socially engaged participatory art, known in the US as “social practice.” Claire Bishop follows the trajectory of twentieth-century art and examines key moments in the development of a participatory aesthetic. This itinerary takes in Futurism and Dada; the Situationist International; Happenings in Eastern Europe, Argentina and Paris; the 1970s Community Arts Movement; and the Artists Placement Group. It concludes with a discussion of long-term educational projects by contemporary artists such as Thomas Hirschhorn, Tania Bruguera, Paweł Althamer and

Paul Chan. Since her controversial essay in *Artforum* in 2006, Claire Bishop has been one of the few to challenge the political and aesthetic ambitions of participatory art. In *Artificial Hells*, she not only scrutinizes the emancipatory claims made for these projects, but also provides an alternative to the ethical (rather than artistic) criteria invited by such artworks. *Artificial Hells* calls for a less prescriptive approach to art and politics, and for more compelling, troubling and bolder forms of participatory art and criticism.

This manual provides corporations and their suppliers with a deeper understanding of the barriers and challenges preventing women-owned businesses from accessing and fully participating in local and global values chains. It provides the tools and techniques for reducing or eliminating these barriers and for leveraging the vast untapped economic potential represented by women-owned businesses. For many women, entrepreneurship offers a path to economic empowerment and it is incumbent upon corporations to help create conditions that permit this.

Higher Education for Modern Societies VIZ Media LLC

Developing learners' competence is an important part of the mission of higher education. The kind of competences that higher education should develop depend on what we see as the purposes of higher education. The term "converging competences" points to the need not only to train individuals for specific tasks, but to educate the whole person. Education is about acquiring skills, but also about acquiring values and attitudes. As education policies move from an emphasis on process to a stronger emphasis on the results of the education processes, learning outcomes have come to be seen as an essential feature of policies both in Europe and North America. This book explores the roles and purposes of higher education in modern, complex societies and the importance of competences in this respect. Although public debate in Europe could give the impression that the sole purpose of higher education is to prepare for the labour market, this important role is complemented by at least three others: preparation for democratic citizenship, personal development and the development of a broad and advanced knowledge base. This work draws on the experiences in both Europe and North
