Student attrition has been a perennial theme in South African higher education throughout the decade. In its National Plan for Higher Education (2001), the Department of Education attributed high dropout rates primarily to financial and/or academic exclusions. Four years later, it reported that 30% of students dropped out in their first year of study and a further 20% during their second and third years. Against this backdrop, the erstwhile research programme on Human Resources Development initiated a research project to investigate more thoroughly why students dropped out, what led them to persist in higher education to graduation, and what made for a successful transition to the labour market. The chapters in this volume address these issues in relation to one or more of seven institutional case studies conducted in 2005.

This practical guide is an introduction to crofting law for those with an interest in it or who may touch upon it, whether that is lawyers, law students, land agents, crofters, landlords, or anyone else with an interest in it. It covers the main issues briefly and concisely, aiming to highlight the complexity of crofting law and the pitfalls and traps that await the uninitiated. The aim is that readers will, as a result, be better versed in the basics of crofting law. ABOUT THE AUTHOR Brian Inkster is a solicitor specialising in crofting law. He is the Hon Secretary of the Crofting Law Group, a member of the Crofting Group of Scottish Land & Estates, the Cross-Party Group on Crofting at the Scottish Parliament, the Scottish Government Crofting Stakeholder Forum, the Crofting Register Stakeholder Forum and the Scottish Government Crofting Bill Group. Brian blogs about crofting law at the Crofting Law Blog (croftinglawblog.com) and regularly writes articles for The Crofter (the trade magazine of the Scottish Crofting Federation). He also provides comment and articles to local and national newspapers and magazines such as The West Highland Free Press, The Shetland Times, The Oban Times, The Northern Times, The Scotsman, The Herald, The Press & Journal, The Scottish Farmer, Scottish Legal News and The Journal of the Law Society of Scotland. Brian also gives talks on crofting law to universities and at conferences, workshops and seminars. He has provided detailed submissions to the Scottish Government on proposed crofting law reform. Brian has been interviewed about crofting law on BBC Alba, BBC Reporting Scotland and Sunday Politics Scotland. He has also been interviewed about crofting law on local and national Scottish radio news programmes. Brian was born and brought up in Shetland. He is the son of a fisherman rather than a crofter. He studied law at the University of Edinburgh before moving to Glasgow in 1991 to undertake his legal traineeship. Following conclusion of his traineeship Brian continued to practice law in Glasgow where he

founded his own law firm, Inksters, in 1999. Inksters now also have offices in Aberdeen, Edinburgh, Forfar, Inverness, Lerwick, Portree, Thurso and Wick. Inksters provide a free legal advice helpline on crofting law to members of the Scottish Crofting Federation. Brian provides tutoring on Acquiring and Evaluating a Croft / Crofting Law Basics to the Access to Crofting Toolkit Course run by the Scottish Crofting Federation. Brian also has a speciality in the law of servitudes (easements) having acted for the pursuers in *Moncrieff v Jamieson*. This case was ultimately decided in the House of Lords and has been described by Professor Roddy Paisley as "one of the most important cases on servitudes in the last 100 years". It established for the first time in law that, in certain circumstances, you can have a servitude right to park a car ancillary to a right of access. Brian obtained the distinction of being named Solicitor of the Year at the Law Awards of Scotland in 2006. He was called "a one man Scottish legal institution" in the Recommended Law Firm Guide 2010. At the Law Awards of Scotland in 2014 he was recognised as Managing Partner of the Year. Brian has an active interest in entrepreneurship, marketing, technology and corporate social responsibility in relation to running a law firm. He is often asked to speak on these topics at conferences, summits and retreats.

Co-operation in Education Abrams

This title explores the place of education in development debates and provides a systematic as well as a theoretical overview of the main approaches to education and development. It emphasises the fact that education is profoundly shaped by national and local cultures even if many issues are shared across institutions in different locations. Education and Development discusses different theoretical accounts from different disciplinary traditions to help students understand the complexity of the overall debate. The text does not shy away from discussions of education's negative impacts, and insists that an account of education must include consideration of early childhood development, adult, vocational and higher education, as well as the growing range of informal and distance forms. It includes chapters on human capital, human rights and human development, and on education, gender and development, and draws on examples from a wide range of countries and regions such as India, Hong Kong, Kenya and South Africa. The book has a well-developed pedagogy including text boxes, chapter summaries, key questions, links to websites and videos, and annotated further reading sections. Particular attention is paid to ensuring that a plurality of voices, contexts and educational sub-sectors are represented in the boxes, weblinks and references. Education and Development provides an introductory overview to the field, aimed at the undergraduate level, while critically engaging with key themes and questions. The book will also be of interest to development practitioners, policymakers, entrepreneurs and corporate employees engaged in aspects of education and development work.

The Technical and Vocational Education and Training (TVET) college environment is marked by increasingly stark juxtapositions between what needs to be achieved in the post-school education sector and the increasing difficulty of current conditions. The 'triple challenge' of poverty, inequality and unemployment weighs heavily on the social, political and economic fabric of the country and expectations are high that the TVET colleges can make a pivotal contribution to counter

these challenges. Despite laudable increases in TVET enrolment, the education system needs to work harder to accommodate the weight of demand for post school further education and training (FET) band qualifications from young people not in education, employment or training. At the same time, it is vital to secure adequate quality in TVET programmes which depend so much on the competence and commitment of college lecturers. This collection offers a set of research papers that provide new analytic and empirical material on:

- The political economy of TVET types in different countries which, by comparison, illuminate the South African case;
- A periodisation of government interventions in the TVET sector over the last three decades;
- The unsettled state and status of TVET lecturers in relation to their job requirements and conditions of service;
- The halting evolution of collegial relationships between college lecturers towards higher collegiality;
- Employer expectations of college graduates and how colleges are responding; and
- An analysis of the outcomes of a college improvement intervention in Limpopo and the Eastern Cape.

This book will offer valuable information and insights for decision-makers as well as analysts of institutional change concerning links between education and economic growth, with particular regard to TVET graduates' employment rates.

Essentials of Pediatric Surgery is an introductory reference on basic pediatric medicine and surgery. The book provides the reader the information on which a surgeon relies on in diagnosis and treatment. Chapters start with the physiology of infants before progressing into separate topics about the surgery of different sections including the head and neck, chest, abdomen, reproductive organs, cancers, and the nervous system. Information is presented in a simple manner, which makes the text easy to understand for both students and medical residents. Key Features:

- 8 chapters covering introductory topics about pediatric physiology and surgery
- Includes chapters which cover specialized domains in the subject based on different parts of the body
- Chapters include information about clinical presentations, diagnosis and treatment of different conditions
- Simple, structured layout for easy understanding
- References for further reading

Essentials of Pediatric Surgery is a handy textbook for both medical students studying modules on pediatric surgery and residents in training in pediatric clinics.

Change Management in TVET Colleges The National Skills Development Handbook 2010/11

This volume comprises four parts: the act; the rules; the regulations; and table of cases and index. It focuses on the Deeds Registries Act of 1937 and is part of a quarterly bilingual journal on legal matters relevant to the business community.

Addresses the Challenges Associated with System-on-Chip Integration Network-on-Chip: The Next Generation of System-on-Chip Integration examines the current issues restricting chip-on-chip communication efficiency, and explores Network-on-chip (NoC), a promising alternative that equips designers with the capability to produce a scalable, reusable, and high-performance communication backbone by allowing for the integration of a large number of cores on a single system-on-chip (SoC).

This book provides a basic overview of topics associated with NoC-based design: communication infrastructure design, communication methodology, evaluation framework, and mapping of applications onto NoC. It details the design and evaluation of different proposed NoC structures, low-power techniques, signal integrity and reliability issues, application mapping, testing, and future trends. Utilizing examples of chips that have been implemented in industry and academia, this text presents the full architectural design of components verified through implementation in industrial CAD tools. It describes NoC research and developments, incorporates theoretical proofs strengthening the analysis procedures, and includes algorithms used in NoC design and synthesis. In addition, it considers other upcoming NoC issues, such as low-power NoC design, signal integrity issues, NoC testing, reconfiguration, synthesis, and 3-D NoC design. This text comprises 12 chapters and covers:

- The evolution of NoC from SoC—its research and developmental challenges
- NoC protocols, elaborating flow control, available network topologies, routing mechanisms, fault tolerance, quality-of-service support, and the design of network interfaces
- The router design strategies followed in NoCs
- The evaluation mechanism of NoC architectures
- The application mapping strategies followed in NoCs
- Low-power design techniques specifically followed in NoCs
- The signal integrity and reliability issues of NoC
- The details of NoC testing strategies reported so far
- The problem of synthesizing application-specific NoCs
- Reconfigurable NoC design issues
- Direction of future research and development in the field of NoC
- Network-on-Chip: The Next Generation of System-on-Chip Integration

covers the basic topics, technology, and future trends relevant to NoC-based design, and can be used by engineers, students, and researchers and other industry professionals interested in computer architecture, embedded systems, and parallel/distributed systems.

As the number of processor cores and IP blocks integrated on a single chip is steadily growing, a systematic approach to design the communication infrastructure becomes necessary. Different variants of packed switched on-chip networks have been proposed by several groups during the past two years. This book summarizes the state of the art of these efforts and discusses the major issues from the physical integration to architecture to operating systems and application interfaces. It also provides a guideline and vision about the direction this field is moving to. Moreover, the book outlines the consequences of adopting design platforms based on packet switched network. The consequences may in fact be far reaching because many of the topics of distributed systems, distributed real-time systems, fault tolerant systems, parallel computer architecture, parallel programming as well as traditional system-on-chip issues will appear relevant but within the constraints of a single chip VLSI implementation.

A description of a series of seven public polls conducted from January-September 2003 dealing with the conflict in Iraq. Respondents were probed for key perceptions and beliefs as well as their attitudes on what US policy should be. "... It was discovered that a substantial portion of the public had a number of misperceptions that were demonstrably false or were at odds with the dominant view in the intelligence community."--Introduction.

This book provides a single-source reference to routing algorithms for Networks-on-Chip (NoCs), as well as in-depth discussions of advanced solutions applied to current and next generation, many core NoC-based Systems-on-Chip (SoCs). After a basic introduction to the NoC design paradigm and architectures, routing algorithms for NoC architectures are presented and discussed at all abstraction levels, from the algorithmic level to actual implementation. Coverage emphasizes the role played by the routing algorithm and is organized around key problems affecting current and next generation, many-core SoCs. A selection of routing algorithms is included, specifically designed to address key issues faced by designers in the ultra-deep sub-micron (UDSM) era, including performance improvement, power, energy, and thermal issues, fault tolerance and reliability.

Introduction to Policing, Third Edition continues to focus on the thought-provoking, contemporary issues that underscore the challenging and rewarding world of policing. Steven M. Cox, Susan Marchionna, and experienced law enforcement officer Brian D. Fitch balance theory, research, and practice to give students a comprehensive, yet concise, overview of both the foundations of policing and the expanded role of today's police officers. The accessible and engaging writing style, combined with stories from the field, make policing concepts and practices easy for students to understand and analyze. Unique coverage of policing in multicultural communities, the impact of technology on policing, and extensive coverage of policing strategies and procedures — such as those that detail the use of force — make this bestselling book a must-have for policing courses.

The Next Generation of System-on-Chip Integration

Brian and his friends are not part of the cool crowd. They're the misfits and the troublemakers—the ones who jump their high school's fence to skip class regularly. So when a deadly virus breaks out, they're the only ones with a chance of surviving. The virus turns Brian's classmates and teachers into bloodthirsty attackers who don't die easily. The whole school goes on lockdown, but Brian and his best friend, Chad, are safe (and stuck) in the theater department—far from Brian's sister, Kenzie, and his ex-girlfriend with a panic attack

problem, Laura. Brian and Chad, along with some of the theater kids Brian had never given the time of day before, decide to find the girls and bring them to the safety of the theater. But it won't be easy, and it will test everything they thought they knew about themselves and their classmates.
