The bestselling author of *Where the Heart Is* returns with a heartrending tale of two children in search of a place to call home. Lutie McFee's history has taught her to avoid attachments...to people, to places, and to almost everything. With her mother long dead and her father long gone to find his fortune in Las Vegas, 15-year-old Lutie lives in the god-forsaken town of Spearfish, South Dakota with her twelve-year-old brother, Fate, and Floy Satterfield, the 300-pound ex-girlfriend of her father. While Lutie shoplifts for kicks, Fate spends most of his time reading, watching weird TV shows and worrying about global warming and the endangerment of pandas. As if their life is not dismal enough, one day, while shopping in their local Wal-Mart, Floy keels over and the two motherless kids are suddenly faced with the choice of becoming wards of the state or hightailing it out of town in Floy's old Pontiac. Choosing the latter, they head off to Las Vegas in search of a father who has no known address, no phone number and, clearly, no interest in the kids he left behind. Made in the U.S.A. is the alternately heartbreaking and life-affirming story of two gutsy children who must discover how cruel, unfair and frightening the world is before they come to a place they can finally call home.

Dr. Samuel Glasstone, the senior author of the previous editions of this book, was anxious to live until his ninetieth birthday, but passed away in 1986, a few months short of this milestone. I am grateful for the many years of stimulation received during our association, and in preparing this edition have attempted to maintain his approach. Previous editions of this book were intended to serve as a text for students and a reference for practicing engineers. Emphasis was given to the broad perspective, particularly for topics important to reactor design and operation, with basic coverage provided in such supporting areas as neutronics, thermal-hydraulics,

and materials. This, the Fourth Edition, was prepared with these same general objectives in mind. However, during the past three decades, the nuclear industry and university educational programs have matured considerably, presenting some challenges in meeting the objectives of this book. Nuclear power reactors have become much more complex, with an accompanying growth in supporting technology. University programs now offer separate courses covering such basic topics as reactor physics, thermal hydraulics, and materials. Finally, the general availability of inexpensive xv xvi Preface powerful micro-and minicomputers has transformed design and analysis procedures so that sophisticated methods are now commonly used instead of earlier, more approximate approaches.
