And yet, there is hardly another field with so much prejudice, misconception, and debate as diet and health, let alone hair health. Pharmacy aisles and Internet drugstores are full of nutritional supplements promising full, thick, luscious hair for prices that range from suspiciously cheap to dishearteningly exorbitant. Since there lies an important commercial interest in the nutritional value of various nutritional supplements, a central question that arises is whether increasing the content of an already adequate diet with nutrients may further promote hair growth and quality. This book aims at distinguishing facts from fiction, and at providing a sound scientific basis for nutrition-based strategies for healthy hair, at the same time acknowledging the problems and limitations of our current understanding and practice. In the study of all sciences, chemistry is considered the central science. This is simply because it is essential to the study of all other sciences and (although not obvious), is fundamentally core to hairstyling and professional barbering. Without truly appreciating the chemistry, a barber or stylist will be deprived of the know-how behind the central component which drives the industry and their profession. Understanding hair chemistry is now more important than ever as it has served in some civilisations to represent power, beauty and even survival. (C)hair science is a book written by an ex-academic scientist (and bioengineer) turned-entrepreneur and pro-barber. The manuscript provides scientific content that professional barbers can use to better understand hair both on a macro and micro scale.
