Some have claimed that "War is too important to be left to the generals," but P. W. Singer asks "What about the business executives?" Breaking out of the guns-for-hire mold of traditional mercenaries, corporations now sell skills and services that until recently only state militaries possessed. Their products range from trained commando teams to strategic advice from generals. This new "Privatized Military Industry" encompasses hundreds of companies, thousands of employees, and billions of dollars in revenue. Whether as proxies or suppliers, such firms have participated in wars in Africa, Asia, the Balkans, and Latin America. More recently, they have become a key element in U.S. military operations. Private corporations working for profit now sway the course of national and international conflict, but the consequences have been little explored. In this book, Singer provides the first account of the military services industry and its broader implications. Corporate Warriors includes a description of how the business works, as well as portraits of each of the basic types of companies: military providers that offer troops for tactical operations; military consultants that supply expert advice and training; and military support companies that sell logistics, intelligence, and engineering. In an updated edition of P. W. Singer's classic account of the military services industry and its broader implications, the author describes the continuing importance of that industry in the Iraq War. This conflict has amply borne

out Singer's argument that the privatization of warfare allows startling new capabilities and efficiencies in the ways that war is carried out. At the same time, however, Singer finds that the introduction of the profit motive onto the battlefield raises troubling questions—for democracy, for ethics, for management, for human rights, and for national security.

A Total Security Management Approach McGraw Hill Professional

Written by specialists from various fields, this edited volume is the first systematic investigation of the impact of imperialism on twentieth-century Britain. The contributors explore different aspects of Britain's imperial experience as the empire weathered the storms of the two world wars, was subsequently dismantled, and then apparently was gone. How widely was the empire's presence felt in British culture and society? What was the place of imperial questions in British party politics? Was Britain's status as a global power enhanced or underpinned by the existence of its empire? What was the relation of Britain's empire to national identities within the United Kingdom? The chapters range widely from social attitudes to empire and the place of the colonies in the public imagination, to the implications of imperialism for demography, trade, party politics and political culture, government and foreign policy, the churches and civil society, and the armed forces. The volume also addresses the fascinating yet complex question of how, after the formal end of empire, the colonial past has continued to impinge upon our post-colonial present, as contributors reflect upon the diverse ways in which the legacies of empire are interpreted and debated in Britain today.

Decorated US Navy SEAL lieutenant Jason Redman served his country courageously and with

distinction in Colombia, Peru, Afghanistan, and Iraq, where he commanded mobility and assault forces. He conducted over forty capture/kill missions with his men in Iraq, locating more than 120 al-Qaida insurgents. But his journey was not without supreme challenges—both emotional and physical. Redman is brutally honest about his struggles to learn how to be an effective leader, yet that effort pales beside the story of his critical wounding in 2007 while leading a mission against a key al-Qaida commander. On that mission his team was ambushed and he was struck by machine-gun fire at point-blank range. During the intense recovery period that followed, Redman gained national attention when he posted a sign on his door at the National Naval Medical Center in Bethesda, warning all who entered not to "feel sorry for [his] wounds." His sign became both a statement and a symbol for wounded warriors everywhere. From his grueling SEAL training to his search for a balance between arrogance and humility, Redman shares it all in this inspiring and unforgettable account. He speaks candidly of the grit that sustained him despite grievous wounds, and of the extraordinary love and devotion of his wife, Erica, and his family, without whom he would not have survived. Vivid and powerful, emotionally resonant and illuminating, *The Trident* traces the evolution of a modern warrior, husband, and father, a man who has come to embody the never-say-die spirit that defines the SEALs, one of America's elite fighting forces.

*Includes pictures of art depicting important people, places, and events. *Describes the different classes of Roman gladiators and the armor and weaponry they used. *Describes gladiatorial combat and the myths and misconceptions about the fight. *Includes footnotes and a bibliography for further reading. "He vows to endure to be burned, to be bound, to be beaten, and to be killed by the sword." - The gladiator's oath, according to Petronius in the *Satyricon*. Gladiators are somewhat synonymous with ancient Rome, and even thousands of years after they performed on the sands, when people are asked about Roman culture, many think about and

refer to the bloody spectacles of men fighting to the death in the arena. Gladiatorial combat is often regarded as barbaric, and most find it very difficult to comprehend how people could have enjoyed watching something so violent, but nevertheless, the spectacle still intrigues and fascinates people today, whether in movies like *Gladiator* or television shows about *Spartacus*. Gladiatorial combat traces its origins back to the early Republican period from the 5th-3rd century B.C., but it's still unclear where these combats first appeared. Credit has been given to both the Etruscans in northern Italy and the Campanians in southern Italy, though the first recorded gladiatorial combat occurred in the 3rd century B.C. at the funeral of D. Junius Brutus Pera. His sons organized a combat between three different pairs of gladiators who fought at their father's grave, but exactly what these first gladiatorial combats were supposed to represent remains unclear. Some believe that the spilling of human blood was a way of offering a sacrifice to the dead, while others suggest that the contests themselves were a funeral offering in honor of the dead. Gladiatorial combat began in the Republican period and was associated with death and burial, but due to its popularity it became an organized form of entertainment in the Imperial Age, and even as the gladiators were considered low class, they were also admired, leading to some Roman men and women volunteering to become gladiators. Whatever the original role of gladiatorial combats, they thrilled Roman audiences for many centuries. Each match usually pitted one type of gladiator against a different type of gladiator, with each having their own kind of armor, weaponry and fighting style. For example, the *retiarius* was a gladiator that used a net, dagger and trident as his offensive weapons, while only wearing a protective guard over his left arm for protection. The *retiarius* would typically fight against the *secutor*, a gladiator armed with a sword, large shield, helmet and protective covering on his right arm and left leg. Therefore, a *retiarius* sacrificed armor for quickness in battle, while the *secutor* did the opposite. Although people often think of gladiators fighting to the death, the outcome of gladiatorial combats was not always fatal for one of the participants. If a gladiator fought well, the sponsor of the show could spare him, particularly if the crowd desired it. The fact that the outcome of matches was never the same and the crowd could help determine the result of the match certainly added to the Roman public's pleasure, making it a lot less surprising that such an abhorrent spectacle still fascinated the modern world. *The Roman Gladiators: The History and Legacy of Ancient Rome's Most Famous Warriors* examines the history of the gladiators and the games they participated in, explaining what life and death was like for the men who fought in Rome's most famous form of entertainment. Along with pictures depicting important people, places, and events, you will learn about gladiators like you never have before.

Taiyari has eight weeks, at best, to save her lover from his boyhood dreams. In the mid-21st century, insurgencies and civil unrest stemming from climate change have created a boom for private military corporations. Caden Duran, clawing his way out of an abusive childhood, hopes to rise through the well-paid ranks of a PMC and become one of the world's elite soldier-celebrities. Now, battling an insurgency in Colombia, Caden finds himself on the fast-track to admiration and wealth. He is participating in a field promotion campaign, where PMC officers compete for promotion to colonel in the course of a single contract. The problem is that, to win the contest, officers must demonstrate their efficiency by completing their combat missions with the smallest number of men and assets. This makes it harder to win their battles - and even survive them. As the campaign progresses, the officers, including Caden, take ever-more audacious risks in the field, and it is clear that someone will eventually miscalculate, overreach, and most likely pay with his life. Caden once saved Taiyari's village from a murderous cartel; since then, she has tried to convince him to leave this life of legal contract killing before his luck runs out. But in Colombia, she hears disturbing rumors of what Caden has done to civilians in his obsessive pursuit of victory. Uncovering evidence of war crimes would hardly be easy, and even less palatable, but Taiyari is not the type to accept a pretty lie. Her investigation comes to a head at the very moment the field promotion campaign reaches its knife-edge climax, and it is obvious that everyone involved will have to pay a price for their dreams. This novel is for hardcore military sci-fi / speculative fiction fans, for readers who enjoy futuristic weapons and innovative tactics as much as a love story; this is "The Wild Geese" meets "Mission Impossible" as David Drake might write it.

The main focus of this book is on the contribution of Welsh scientists, engineers and facilities in Wales to the British nuclear programme – especially the military programme – from the Second World War through to the present day. After the war, a number of Welsh scientists at Harwell played an important role in the development of civil nuclear power, and subsequently also at Aldermaston where Welsh scientists and engineers were a key part of William Penney 's team producing the first UK nuclear device tested at Monte Bello in 1952. This book highlights the scientific and engineering contribution made by Welsh scientists and engineers, and, where possible, it considers their backgrounds, education, personalities and interests. Many, for

example, were sons of miners from the Welsh valleys, whose lives were changed by their teachers and education at Wales 's university institutions – which responds in part to the question, ' Why so many Welshmen? '

When good things happen in your life, do you except them, wonder why you were so chosen, automatically look for someone to say Thank You to, or was there other reasons you were so selected for this higher position, or like us accept them, then to silently view what you have foolishly, or even stupid, to allow this chain of events that you have no control of? Confused...well this is why this why this book was written! Yan and Sheila are two people described as above, so far married, as well contented in what life has thrown at them both, no real ambitions at this present time, hoping for children, to make their lives complete, when their village is suddenly becoming a different world when a factory is built on farmland, to promises employment for all the villages, male and female, certainly more than they earned before...Life was on the up, or was it? The Owner by his title he uses was seemingly a Lord, so Sir Richard Blenheim to give the Gentleman his full title, was now the overseer of to only his factory but the Village, and the entire population! Which works in the Villagers favour, for he is a kindly man, operating an open hand to all the villagers problems, and rapid solutions, quickly building a remarkable relationship with ever one, even to the extent of making their days at the factory longer without a pay rise, one and all accepted the new terms without questions, as one only had to look at all the perks they had been freely given, and the staff expressed their thankfulness by excepting the new terms with out question? Yet at this point, again all the Staff were gathered together, and told of a form of a secret that was being circulated amongst the Staff, that amid all the new buildings, extensions, and enlargement of the main building block it now housed a SECRET PART of the factory, one which was housed by entry the furthest away doorway, and this units Staff did not live in the village? If we were mindful of the ever changing scenario perhaps we should have opted to move from the first change in the management structure, as Artic, from nowhere, was introduced into our system as the Security Manager honking into two people directly? Yup, that was us two, we must have had 'guidable' tattooed on our forehead had we thought about it at the time---but no we just carried on! Things steadily got worse, as a chance sighting by Yan of suspicious characters, led us to meeting the owner of the factory, and eventual promotion to being managers, added to which was a huge pay rise, which in hindsight was equal to the thirty pieces of silver? Still we did not learn, we worked harder, enlarged our Staff numbers, engaged in many more Management decisions, even to the extent of exposing a spy, more pay, more perks, it was endless we simply could do no wrong, yet as Yan and I now viewed the evidence, it was all there for us to fall over, yet we carried on, without seemingly without a care in the world, I looked at Yan and he too nodded...We were stupid! We both agreed that when the soldiers/ bandits or who ever they were, burst into our house, our opinions of being self important were well and truly vamoosed into a state of shock, as the whole truth was explained in graphic, alarming details, we found no longer hard to believe, from all the previous lies we had earnestly swallowed as the truth! What was left...that dear reader for you to discover, but as a warning do not read alone at night, for sleep might be impossible?
