No book will ever come closer than this to providing an inside overview of Admiral Hyman G. Rickover's nuclear propulsion program. The author, an Atomic Energy Commission (AEC) historian assigned to the admiral's office, spent years observing the project and its controversial leader in action, and the insights he provides here reflect both his familiarity with the subject and his ability to remain an objective observer. From 1974 to the day Rickover retired in 1982, Francis Duncan had free access to files, documents, and personnel at every level of involvement--a rare, never-to-be-repeated opportunity that most historians dream of but few get. And, as this book clearly shows, he took full advantage of the situation to gain a unique understanding of exactly how the program operated. The result is a thorough, balanced record of what may well be the U.S. Navy's and the nation's most important and far-reaching project of the twentieth century. Knowing that facts and figures alone don't tell the entire story, Duncan talked to scores of people who dealt with day-to-day operations, watched men in prototype training and then accompanied them to sea, visited civilian and naval installations, and had close contact with Rickover himself. He also interviewed former U.S. presidents, secretaries of the navy, chiefs of naval operations, AEC chairmen, and legislative leaders who kept tabs on the projects but were removed from daily activities. Never once, the author says, did the admiral attempt to interfere with his research, nor did Rickover read the manuscript. While the focus here is on the nuclear program, not the man, this book does provide fascinating insights into Rickover's personality and his efforts to maintain standards of excellence that would assure the program's safety and its ultimate success. Using one of the admiral's favorite terms, "the discipline of technology," to demonstrate the method of technological application advocated by Rickover, Duncan effectively

balances technical detail with astute analysis and even drama. Filled with information not found elsewhere, his study is a valuable chronicle of the development of submarine propulsion reactors, the loss of the Thresher, the struggle over the application of nuclear propulsion to surface fleet, and the use of the Shippingport Atomic Power Plant to illustrate the feasibility of a light-water breeder reactor.

Building a Special with Ant Anstead Master Mechanic Legare Street Press  
An accessible, authoritative look at seahorses, their evolution, biology, habitat, and behavior. Absolutely captivating creatures, seahorses seem like a product of myth and imagination rather than of nature. They are small, elusive, and are named for their heads, which are shaped like miniature ponies with tiny snouts. They swim slowly upright by rapidly fanning their delicate dorsal fin, coil their tails to anchor themselves in a drift, and spend days in a dancing courtship. Afterward, it is the male who carries the female ' s eggs in his pouch and hatches the young. Seahorses are found worldwide, and they are highly sensitive to environmental destruction and disturbance, making them the flagship species for shallow-water habitat conservation. They are as ecologically important as they are beautiful. Seahorses celebrates the remarkable variety of seahorse species as well as their exquisiteness. Fifty-seven species, including seadragons and pipefish, are presented in lush, life-size photographs alongside descriptive drawings, and each entry includes detailed and up-to-date information on natural history and conservation. Sara Lourie, a foremost expert on seahorse taxonomy, presents captivating stories of species that range from less than an inch to over a foot in height, while highlighting recent discoveries and ecological concerns. Accessibly written, but comprehensive in scope, this book will be a stunning and invaluable reference on seahorse evolution, biology, habitat, and behavior. Masters of camouflage and rarely seen, seahorses continue to be a fascinating subject of active research. This visually rich and informative book is certain to become the authoritative guide to these charming and unusual wonders of the sea, beloved at aquariums the world over. Praise for *Seahorses* “ This guide covers every one of the 42 known species of seahorses, plus 15 additional relatives, including the seadragon. In addition to beautiful color photographs of all but the rarest species, the descriptions nicely summarize what is known about the distribution, reproduction, and identifying characters of each. The really striking feature, however, is an elegantly simple one: inclusion of a life-sized shadow/silhouette of each species. It is rather astounding to see that some of the pygmy seahorses are literally no larger than the average housefly! . . . Highly recommended. ” —Choice

In the time since the second edition of *The ACS Style Guide* was published, the rapid growth of electronic communication has dramatically changed the scientific, technical, and medical (STM) publication world. This dynamic mode of dissemination is enabling scientists, engineers, and medicalpractitioners all over the world to obtain and transmit information quickly and easily. An essential constant in this changing environment is the requirement that information remain accurate, clear, unambiguous, and ethically sound.This extensive revision of *The ACS Style Guide* thoroughly

examines electronic tools now available to assist STM writers in preparing manuscripts and communicating with publishers. Valuable updates include discussions of markup languages, citation of electronic sources, online submission of manuscripts, and preparation of figures, tables, and structures. In keeping current with the changing environment, this edition also contains references to many resources on the internet. With this wealth of new information, The ACS Style Guide's Third Edition continues its long tradition of providing invaluable insight on ethics in scientific communication, the editorial process, copyright, conventions in chemistry, grammar, punctuation, spelling, and writing style for any STM author, reviewer, or editor. The Third Edition is the definitive source for all information needed to write, review, submit, and edit scholarly and scientific manuscripts.

With the used boat market growing and becoming more complex, here is the book that all boat buyers have been waiting for: John Kretschmer's Used Boat Notebook has long been one of the most popular features in Sailing Magazine where Kretschmer provides a hard hitting, detailed review of a well-known boat each month. In this new collection, Kretschmer dedicates each chapter to an individual boat, providing the same fine details and updated information that made his magazine column a success. The thoroughly researched reviews of the 40 most popular boats include owner insights, a guide to common problems and suggestions on where to find parts, advice and support. There are plenty of books that offer general information on what to look for in an offshore boat, but only this book focuses on the specifics a prospective buyer is looking for.

While there are many books available on methods of organic and biochemical analysis, the majority are either primarily concerned with the application of a particular technique (e.g. paper chromatography) or have been written for an audience of chemists or for biochemists working mainly with animal tissues. Thus, no simple guide to modern methods of plant analysis exists and the purpose of the present volume is to fill this gap. It is primarily intended for students in the plant sciences, who have a botanical or a general biological background. It should also be of value to students in biochemistry, pharmacognosy, food science and 'natural products' organic chemistry. Most books on chromatography, while admirably covering the needs of research workers, tend to overwhelm the student with long lists of solvent systems and spray reagents that can be applied to each class of organic constituent. The intention here is to simplify the situation by listing only a few specially recommended techniques that have wide currency in

phytochemical laboratories. Sufficient details are provided to allow the student to use the techniques for themselves and most sections contain some introductory practical experiments which can be used in classwork.

Submarine Cables and the Oceans Jones & Bartlett Publishers

This open access book examines global plastic pollution, an issue that has become a critical societal challenge with implications for environmental and public health. This volume provides a comprehensive, holistic analysis on the plastic cycle and its subsequent effects on biota, food security, and human exposure. Importantly, global environmental change and its associated, systems-level processes, including atmospheric deposition, ecosystem complexity, UV exposure, wind patterns, water stratification, ocean circulation, etc., are all important direct and indirect factors governing the fate, transport and biotic and abiotic processing of plastic particles across ecosystem types. Furthermore, the distribution of plastic in the ocean is not independent of terrestrial ecosystem dynamics, since much of the plastic in marine ecosystems originates from land and should therefore be evaluated in the context of the larger plastic cycle. Changes in species size, distribution, habitat, and food web complexity, due to global environmental change, will likely alter trophic transfer dynamics and the ecological effects of nano- and microplastics. The fate and transport dynamics of plastic particles are influenced by their size, form, shape, polymer type, additives, and overall ecosystem conditions. In addition to the risks that plastics pose to the total environment, the potential impacts on human health and exposure routes, including seafood consumption, and air and drinking water need to be assessed in a comprehensive and quantitative manner. Here I present a holistic and interdisciplinary book volume designed to advance the understanding of plastic cycling in the environment with an emphasis on sources, fate and transport, ecotoxicology, climate change effects, food security, microbiology, sustainability, human exposure and public policy.

Ant Anstead's Building a Special brings the Haynes story full circle, coming 61 years after the original Building a 750 Special was written by John Haynes, Haynes Publishing's founder, when he was still a schoolboy. This book is a TV tie-in, following the 12-part TV series Ant Anstead Master Mechanic, aired on Motor Trend, part of the Discover Network in the US and UK,

following Ant Anstead's build of his own-design 'special' car, taking inspiration from the Alfa 158 - the first World Championship-winning F1 car, which raced from the 1930s until the 1950s. The 12-part TV series followed Ant's build of the car, from the first design ideas, through the construction, culminating in the debut of the car during the 2019 US Grand Prix weekend in Austin, Texas. The book follows Ant's personal build of the car, from the selection of the donor MG TD for the chassis, and Alfa Romeo Spider for the engine and gearbox, through modifying the chassis, building the suspension, steering, brakes, bodywork and interior, and putting all the components together to produce a finished one-off 'special.' Content includes: Introduction The history of specials Planning Donor car Chassis, suspension, steering, rear axle Engine, fuel system, cooling system, ancillaries, exhaust Gearbox Bodywork Braking system Cockpit Wiring Preparation and painting Testing Setting up and Making road legal.

During the Cold War, freedom of expression was vaunted as liberal democracy ' s most cherished possession—but such freedom was put in service of a hidden agenda. In The Cultural Cold War, Frances Stonor Saunders reveals the extraordinary efforts of a secret campaign in which some of the most vocal exponents of intellectual freedom in the West were working for or subsidized by the CIA—whether they knew it or not. Called "the most comprehensive account yet of the [CIA ' s] activities between 1947 and 1967" by the New York Times, the book presents shocking evidence of the CIA ' s undercover program of cultural interventions in Western Europe and at home, drawing together declassified documents and exclusive interviews to expose the CIA ' s astonishing campaign to deploy the likes of Hannah Arendt, Isaiah Berlin, Leonard Bernstein, Robert Lowell, George Orwell, and Jackson Pollock as weapons in the Cold War. Translated into ten languages, this classic work—now with a new preface by the author—is "a real contribution to popular understanding of the postwar period" (The Wall Street Journal), and its story of covert cultural efforts to win hearts and minds continues to be relevant today.
