The transit historian and author of *Under the Sidewalks of New York* delivers a lively and authoritative history of New York City's fabled subway. On the afternoon of October 27, 1904, ordinary New Yorkers descended beneath the sidewalks for the first time to ride the electric-powered trains of the newly inaugurated Interborough Rapid Transit System. More than a century later, the subway has expanded greatly, weaving its way into the fabric of New York's unique and diverse urban life. In *A Century of Subways*, transit historian Brian J. Cudahy offers a fascinating tribute to New York's storied and historic subway system, from its earliest beginnings and many architectural achievements, to the ways it helped shape today's modern metropolis. Taking a fresh look at one of the marvels of the twentieth century, Cudahy creates a vivid sense of this extraordinary system and the myriad ways the city was transformed once New Yorkers started riding below the ground.

In "Social Life in the Insect World," renowned naturalist Jean-Henri Fabre meticulously explores the complex behaviors and intricate social structures of various insect species. Employing an observational style that combines rigorous scientific inquiry with poetic prose, Fabre presents a vivid narrative of the lives of ants, bees, and termites, revealing profound insights into their communication, organization, and survival strategies. Set against the backdrop of late 19th-century entomology, this work contributes significantly to the understanding of social organisms, bridging the gap between natural history and the burgeoning field of behavioral science. Jean-Henri Fabre, often hailed as the father of modern entomology, was profoundly influenced by his early fascination with nature and an unwavering curiosity about the living world. His empirical approach and dedication to studying insects in their natural habitats led him to document behaviors previously overlooked by scientists of his time. Driven by a desire to articulate the beauty and complexity of the insect realm, Fabre's pioneering studies laid the groundwork for future research in both entomology and ecology. "Social Life in the Insect World" is an indispensable resource for anyone interested in entomology, biology, or the broader intricacies of nature. Fabre's engaging writing encourages readers to appreciate the delicate interplay between species and their environments, making it a compelling read for both scholars and casual nature enthusiasts alike.

I have physical scars from past surgeries, however, I have emotional scars as well. They were buried deep inside (hidden). It wasn't until my mother died was I able to "catch my breath" and to make sense of or process the emotional pain I had endured due to her prescription drug addiction, resulting in my own addictions.

The word "science" carries a suggestion sufficient to render a book so labeled taboo to the average reader. But here is a book of genuine science which the most timid may read with delight; for perhaps Fabre never shows his greatness more than through the simplicity of his diction. In this work he imparts great facts about things which are familiar to the sight, but not to the understanding, of most of us. Light, sound, electricity, the locomotive, extinct volcanoes, condensation and evaporation, prehistoric animals, grafting and the sea -- these and many other subjects are dealt with in a simple narrative style as thrilling as the most exciting novel, only with this difference: how infinitely richer we are when we turn the last page of this book, and how infinitely more the world means to us. Fabre opens our eyes. "Full of fascination and models of scientific method." -- Times "The patience and the nicety of M. Fabre's observations are indeed amazing. His eyes see, and they see magical marvels." -- Daily Express
