Troubleshooting Small Gas Engines

Loss of power: A small engine that runs poorly is typically due to failure to properly maintain the engine while not in use. Most general tune-ups will solve these running issues. Bad fuel - Just like bad fuel will cause issues with starting, it will cause issues when running as well. Remove all old fuel or mix or fuel and oil.

Troubleshooting small engine problems | Briggs & Stratton

well, if a snow blower motor is backfiring in the muffler it could be the crab to lean on gas mixture our plunged up needs cleaning blowing out with compressor check float level, could be the pin in the fly wheel is on it ' s ends puts the motor out of time change the fly wheel pin if it ' s not the crab valves should be set at 001 our 002 like a tight snug fit on your feeler gauge this is a tecumseh engine 12 hp same for the 11hp

How to Troubleshoot a Small Gas Engine That Won't Start ...

As fuel is consumed by the engine, the level in the fuel tank lowers. To make up for this, the fuel cap uses a small vent to allow air to enter the tank. If the fuel cap vent is clogged, air won't be able to enter the tank and a vacuum or "vapor lock" will occur. This stops the flow of fuel to

the carburetor causing the engine to stall.

Small Engine Stops After A Few Seconds | Repair Clinic

As you know, Ethanol fuel is blended with regular gas, that's not a problem for cars, but it is for small engines. Typically, the small engine is put away for winter with the gas still in the tank. The ethanol blend attracts moisture and the alcohol content in the gas evaporates. The result is gumming and rust - it's a carb killer.
