Tales of the Barbarian Del Rey
Cinema has the capacity to enflame our passions, to arouse our pity, to inspire our love. Feeling Film is a book that examines the emotional encounters found in contemporary popular cinema cultures. Examining melodrama, film noir, comic book franchises, cult indie movies and romantic comedy within the context of a Jungian-informed psychology and contemporary movements in film-philosophy, this book considers the various kinds of feelings engendered by our everyday engagements with cinema. Greg Singh questions the popular idea of what cinema is, and considers what happens during the anticipation and act of watching a movie, through to the act of sharing our feelings about them, the reviewing process and repeat-viewing practices. Feeling Film does this through a critique of purely textual approaches, instead offering a model which emphasises lived, warm (embodied and inhabited) psychological relationships between the viewer and the viewed. It extends the narrative action of cinema beyond the duration of the screening into realms of anticipation and afterlife, in particular providing insight into the tertiary and participatory practices afforded through rich media engagement. In rethinking the everyday, co-productive relationship between viewer and viewed from this perspective, Feeling Film reinstates the importance of feelings as a central concern for film theory. What emerges from this study is a re-engagement of the place of emotion, affect and feeling in film theory and criticism. In reconsidering the duration of the cinematic encounter, Feeling Film makes a significant contribution to the understanding of the inter-subjective relationship between viewer and viewed. It takes post-Jungian criticism into the realms of post-cinema technologies and reignites the dialogue between depth psychology and the study of images as they appear to, and for, us. This book will make essential reading for those interested in the relationship between film and aspects of depth psychology, film and philosophy students at advanced undergraduate and postgraduate levels, film and cinema academics and cinephiles.

The Essential Novels: Star Wars Legends 10-Book Bundle Del Rey

Speculative science fiction, with its underlying socio-political dialogue, represents an important intersection of popular culture and public discourse. As a pop culture text, the animated series Star Wars: The Clone Wars offers critical commentary on contemporary issues, marking a moment of interplay whereby author and audience come together in what Russian philosopher Mikhail Bakhtin called collaborative meaning making. This book critically examines the series as a voice in the political dialogues concerning human cloning, torture, just war theory, peace and drone warfare.

The cost of statistical computing software has precluded

many universities from installing these valuable computational and analytical tools. R, a powerful open-source software package, was created in response to this issue. It has enjoyed explosive growth since its introduction, owing to its coherence, flexibility, and free availability. While it is a valuable tool for students who are first learning statistics, proper introductory materials are needed for its adoption. Using R for Introductory Statistics fills this gap in the literature, making the software accessible to the introductory student. The author presents a self-contained treatment of statistical topics and the intricacies of the R software. The pacing is such that students are able to master data manipulation and exploration before diving into more advanced statistical concepts. The book treats exploratory data analysis with more attention than is typical, includes a chapter on simulation, and provides a unified approach to linear models. This text lays the foundation for further study and development in statistics using R.

Appendices cover installation, graphical user interfaces, and teaching with R, as well as information on writing functions and producing graphics. This is an ideal text for integrating the study of statistics with a powerful computational tool.

A Reader's Guide to Current Genre Fiction, Fantasy, Western, Romance, Horror, Mystery, Science Fiction Routledge

Given the impressive growth in East Asia after World War II, initially led by Japan, the region's development models have been scrutinized since the 1980s. The shared Confucian cultural heritage, strong government guidance, and export led economies were often cited as contributors to the impressive growth. However, major changes have taken place in Asia on and around the turn of the century: Japan experienced two decades of economic slow-down, while World Bank figures reveal that China is poised to become the largest economy in the world in 2014, overtaking the United States. Bearing this in mind, is it even possible to formulate an East Asian development model in the context of a shifting twenty-first century? And if so, what is it? This book addresses this issue by looking at the economic, political and cultural perspectives of China, Japan and South Korea, focusing on dynamism and potential consensus regarding an East Asian development model. The chapters offer a historical background to the East Asian development model, as well as in-depth case studies of each of the countries concerned to show that whilst the East Asian development model does have distinct characteristics as compared with other areas, and other countries may draw some insights from the East Asian experience, it is not a panacea that fits all circumstances and fits all times. This book will be welcomed by students and scholars of Asian economics, Asian politics, international political economy and development studies.
