Abstract: Nonfood compounds authorized by Chemistry Division, Science, Food Safety and Quality Service for use in slaughtering and processing plants operating under the USDA Poultry, Meat, Rabbit, Shell Egg Grading and Egg Products Inspection Programs are listed. A nonfood compound is

any agent proposed for use in a federally inspected plant but not intended as an ingredient of meat, poultry, rabbit or egg product. Procedures for obtaining compound authorization are given. Listed and unlisted compounds need USDA authorization.

Denaturants; outdoor pesticides; compounds used in nonprocessing areas, cafeterias, heating systems, or holding pens do not require evaluation. Compounds listed as not applicable for evaluation may not be used in the processing area of a plant.

Category code letters designate restrictions for use of each compound. Instructions for use of the list are given.

This book focuses on state of the art technologies to produce microbiologically safe foods for our global dinner table. Each chapter summarizes the most recent scientific advances, particularly with respect to food processing, pre- and post-harvest

food safety, quality control, and regulatory information. The book begins with a general discussion of microbial hazards and their public health ramifications. It then moves on to survey the production processes of different food types, including dairy, eggs, beef, poultry, and fruits and vegetables, pinpointing potential sources of human foodborne diseases. The authors address the growing market in processed foods as well novel interventions such as innovative food packaging and technologies to reduce spoilage organisms and prolong shelf life. Each chapter also describes the normal flora of raw product, spoilage issues, pathogens of concern, sources of contamination, factors that influence survival and growth of pathogens and spoilage organisms, indicator microorganisms, approaches to maintaining product quality and reducing harmful microbial populations, microbial standards for end-product testing, conventional microbiological and molecular methods, and regulatory issues. Other important topics include the safety of genetically

modified organisms (GMOs), predictive microbiology, emerging foodborne pathogens, good agricultural and manufacturing processes, avian influenza, and bioterrorism.

Mirroring a parallel movement in psychology, one recent trend in the study of organizations has been an increased focus on positive management and organizational behavior.

However, while contributing to an enhanced understanding of organizational phenomena, this focus tends to ignore negative aspects of workplace behavior, which can have very serious consequences for individuals, groups, and organizations.

Given what many of us have seen over the past year in terms of the handling (mis-handling) of downsizing, restructuring, and compensation, it seems clear that the darker side of management is a topic of great concern. Thus, Volume 8 of Research in Management is devoted to exploring what has

been called “ The Dark Side ” of management and organizational behavior. It includes seven chapters that are written by leading experts on a diverse range of topics, including abusive supervision attributions, dysfunctional mentors, destructive executives, social exclusion, public and private deviance, instrumental counterproductive behavior, and an examination of the difference between abusive and supportive leadership. Each of these chapters makes a unique contribution to understanding negative workplace behavior and each should stimulate a future stream of research in the same or related domains. Comments by the editors are also provided, highlighting other areas where the study of “ dark side ” behavior and phenomena would seem particularly beneficial for the advancement of knowledge about organizations and their effective functioning.

Psychological testing has grown exponentially as technological advances have permitted it to and societal complexities have necessitated its growth. Psychological testing or psychological assessment is a field characterised by the use of samples of behaviour in order to infer generalisations about a given individual. By samples of behaviour, one means observations over time of an individual performing tasks that have usually been prescribed beforehand. These responses are often compiled into statistical tables that allow the evaluator to compare the behaviour of the individual being tested to the responses of a norm group. The broad categories of psychological evaluation tests include: Norm-referenced, IQ/achievement tests, Neuropsychological tests, Personality tests, Objective tests (Rating scale), Direct observation tests, Psychological evaluations using data mining. New and important research is presented in this book.

Sport Psychology, 2nd Edition provides a synthesis of the major topics in sport psychology with an applied focus and an emphasis on achieving optimal performance. After exploring the history of sport psychology, human motivation, and the role of exercise, there are three main sections to the text:

Performance Enhancement, Performance Inhibition, and Individuals and Teams. The first of these sections covers

topics such as anxiety, routines, mental imagery, self-talk, enhancing concentration, relaxation, goals, and self-confidence. The section on Performance Inhibition includes chapters on choking under pressure, self-handicapping, procrastination, perfectionism, helplessness, substance abuse, and disruptive personality factors. While much of the information presented is universally applicable, individual differences based on gender, ethnicity, age, and motivation are emphasized in the concluding section on Individuals and Teams. Throughout, there are case studies of well-known athletes from a variety of sports to illustrate topics that are being explored.
