Sphingolipids are fundamental to the structures of cell membranes, lipoproteins, and the stratum cornea of the skin. Many complex sphingolipids, as well as simpler sphingoid bases and derivatives, are highly bioactive as extra- and intracellular regulators of growth, differentiation, migration, survival, senescence, and numerous cellular responses to stress. This book reviews exciting new developments in sphingolipid biology/sphingolipidology that challenge our understanding of how multicellular organisms grow, develop, function, age, and

die.

Praise for Treatment of Traumatized Adults and Children "A major stumbling block to adoption of evidence-based practice in the real world of clinical practice has been the absence of clinician-friendly guides. Such guides need to be understandable, free of technical research jargon, infused with clinical expertise, and rich with real-life examples. Rubin and Springer have hit a home run with this series, which has all of these characteristics and more." —Edward J. Mullen, Willma & Albert Musher Chair and Professor, Columbia University "Rubin and Springer have assembled the wisdom of leading practitioners of evidence-based practice interventions, enhancing the likelihood that these practices will be adopted by helping professionals. Written in the language of practitioners, this book represents an exemplar for dissemination of evidence-based practice information." —Joanne Yaffe, Associate Professor, University of Utah College of Social Work Evidence-based interventions for treating traumatized adults and children Part of the Clinician's Guide to Evidence-Based Practice Series, Treatment of Traumatized Adults and Children provides busy mental health practitioners with detailed, step-by-step guidance for implementing clinical interventions that are supported by the latest scientific evidence. Edited by renowned educators Allen Rubin and David W. Springer, this thoroughly useful reference draws on a roster of experts and researchers in the field who have assembled state-of-the-art knowledge into this well-rounded guide, and covers the following interventions that have the best empirical support for treating posttraumatic stress disorder: Prolonged exposure therapy Trauma-focused cognitive behavior therapy Eye Movement Desensitization and Reprocessing (EMDR) Easy-to-use and accessible in tone, this indispensable resource is for practitioners who would like to implement evidence-based, compassionate, and effective interventions in their care of traumatized clients. Georgia Land Surveying History and Law is the first definitive history and analysis of Georgia's land system and the laws that govern it. The book's opening section tells the story of the surveyor's role in transforming Georgia from a frontier to a bounded, populated, and productive colony and state. Paced by anecdotes of surveyors' wilderness experiences, the narrative traces the evolution of Georgia's land subdivision system, beginning with the original, and ultimately impractical, scheme of land granting and rectangular land subdivision under the Trustees of the Georgia Colony. The volume then covers the more flexible but easily abused

headright procedure, and the subsequent lottery and succession of systematic, rectangular surveys under which most of the state was laid out and granted in the early nineteenth century. Finally, in lay terms supported by meticulous citation of authority, the volume discusses the legal aspects of land surveying, including the interests that make up land ownership, the transfer of real property, the interpretation of property descriptions, the location of boundaries, riparian and littoral rights, and other topics. The book examines every point concerning boundaries found in any Georgia case or statute. Based solidly on primary sources and the author's fifteen years of experience in land surveying and title abstracting, Georgia Land Surveying History and Law is an exhaustively researched and scholarly reference that will be useful to surveyors, title attorneys, title abstractors, real estate professionals, geographers, cartographers, historians, and genealogists.

Nowadays, the prevalence of computing systems in our lives is so ubiquitous that we live in a cyber-physical world dominated by computer systems, from pacemakers to cars and airplanes. These systems demand for more computational performance to process large amounts of data from multiple data sources with guaranteed processing times. Actuating outside of the required timing bounds may cause the failure of the system, being vital for systems like planes, cars, business monitoring, e-trading, etc. High-Performance and Time-Predictable Embedded Computing presents recent advances in software architecture and tools to support such complex systems, enabling the design of embedded computing devices which are able to deliver high-performance whilst guaranteeing the application required timing bounds. Technical topics discussed in the book include: Parallel embedded platforms Programming models Mapping and scheduling of parallel computations Timing and schedulability analysis Runtimes and operating systems The work reflected in this book was done in the scope of the European project P-SOCRATES, funded under the FP7 framework program of the European Commission. High-performance and time-predictable embedded computing is ideal for personnel in computer/communication/embedded industries as well as academic staff and master/research students in computer science, embedded systems, cyber-physical systems and internet-of-things.
